

THIS PUBLICATION IS PROVIDED BY THE NORTH AMERICAN JEWISH DATA BANK WITH PERMISSION FROM THE STUDY AUTHORS.

THE NORTH AMERICAN JEWISH DATA BANK IS A COLLABORATIVE PROJECT OF THE JEWISH FEDERATIONS OF NORTH AMERICA AND THE UNIVERSITY OF CONNECTICUT'S CENTER FOR JUDAIC STUDIES AND CONTEMPORARY JEWISH LIFE AND ROPER CENTER FOR PUBLIC OPINION RESEARCH. OUR MISSION IS TO:

PROVIDE EMPIRICAL SURVEY DATASETS ABOUT THE NORTH AMERICAN JEWISH COMMUNITY FROM NATIONAL AND LOCAL SOCIO-DEMOGRAPHIC STUDIES AS WELL AS OTHER TYPES OF CONTEMPORARY AND HISTORICAL SOCIAL SCIENCE RESEARCH.

MAKE AVAILABLE SUBSTANTIVE AND METHODOLOGICAL REPORTS ON THE JEWISH COMMUNITY, IN PARTICULAR, REPORTS BASED ON DATASETS THAT ARE PART OF THE ARCHIVE.

PROMOTE THE DATA BANK TO JEWISH FEDERATIONS, COMMUNAL ORGANIZATIONS, FOUNDATIONS AND OTHER GROUPS INTERESTED IN RESEARCH CONCERNING JEWISH LIFE IN NORTH AMERICA.

ENCOURAGE ACADEMICIANS, STUDENTS, COMMUNAL PROFESSIONALS AND OTHERS TO UTILIZE DATA BANK HOLDINGS AND TO SUBMIT THEIR STUDIES TO THE ARCHIVE.

SPONSOR SEMINARS AND PROVIDE OTHER OPPORTUNITIES FOR RESEARCHERS AND PLANNERS TO DISCUSS ISSUES, IMPROVE METHODOLOGIES AND EXCHANGE IDEAS BASED ON QUANTITATIVE RESEARCH.

PREPARE PUBLICATIONS AND OTHER FORMS OF INFORMATION DISSEMINATION CONCERNING SOCIAL SCIENTIFIC RESEARCH ABOUT NORTH AMERICAN JEWRY.

PROVIDE TECHNICAL ASSISTANCE AND ADVICE TO JEWISH FEDERATIONS, RESEARCHERS, COMMUNAL PROFESSIONALS, JOURNALISTS AND OTHERS INTERESTED IN RESEARCH ON THE JEWISH COMMUNITY.

PLEASE NOTE THAT OUR DATASETS AND REPORTS ARE PROVIDED FOR NON-COMMERCIAL USE ONLY.

FOR MORE INFORMATION, PLEASE VISIT OUR WEBSITE AT

Demography

Jewish Population in the United States, 1971

ESTIMATES for the United States Jewish population in 1971 listed in the tables below total approximately 6,060,000. The prior published estimate (AJYB, 1969 [Vol. 70], p. 260) was 5,869,000 in 1968. The data therefore represent an annual growth figure of 1.07 per cent. This figure is comparable to the annual growth rate of the total resident population of the United States from 1968 to 1971 (exclusive of armed forces abroad). The proportion of the total resident population estimated to be Jewish remained at 2.94 per cent.

As pointed out in earlier articles, the methodologies for computing the two estimates are not comparable. The United States Census estimates are basically a mathematical model using vital statistics as its major parameter. The estimates for the Jewish population, as in the past, are based on figures supplied by member federations of the Council of Jewish Federations and Welfare Funds, supplemented by estimates from the files of the National United Jewish Appeal and adjusted somewhat arbitrarily for unlisted communities. The accuracy of community estimates varies, depending on what methods the individual local communities used in reaching them. The estimated change in population for any one community becomes available in spurts: no change is reported for several years, and then, usually as a result of a study, a new figure representing the cumulative change since the last estimate is established. Changes in the national figure are affected by this, although perhaps to a lesser degree than changes in the individual communities.

Major changes upward, since the 1968 listings, were reported for Miami and Hollywood (Fla.); Orange County (Cal.); Philadelphia and Lower Bucks County (Pa.); Lynn (Mass.), and the District of Columbia. These and similar increases are too large to be explained as constituting natural growth. They are almost certainly the result of one or both of the following: (1) a statistical correction of previous estimates or (2) the result of

migration. With regard to the latter, it remains a distinct possibility that migration *gains* are taken into account more quickly than migration *losses*.

Conceptually, for any one year, the total United States Jewish population would change from the previous year's figure by the arithmetic addition of (1) net migration, plus (2) net natural growth, plus (3) net change due to conversions. It is apparent that at this time we have only fragmentary data on (1), and virtually no hard data for (2) and (3). Changes in the national estimate for consecutive years therefore must be regarded with caution. The fact that the annual growth rate for the Jewish population (1968–1971) is the same as that for the general population raises questions in the light of the known fact that Jews share the characteristics of those general population sub-groups whose fertility rates are below the average.

While this would indicate a doubt about the annual growth rate, we remain uncertain as to whether the earlier or the later population level is at fault. Adding to the problem of estimation is a serious gap left by the lack of current and reliable survey data for New York City. With an estimated 40 per cent of the total Jewish population living in New York City and its three contiguous counties, any substantial change in that area's estimate will similarly affect the national total.

NATIONAL JEWISH POPULATION STUDY

With field work completed, the data derived from the NJPS conducted under the auspices of the Council of Jewish Federations and Welfare Funds are now being prepared for analysis.

While the study will not produce individual community estimates in most cases (New York City will be a noticeable exception), it will offer an independent estimate of the total United States Jewish population. In addition, it will provide some bench-mark figures on birth and death rates, conversion rates, and migration patterns. These will enable us to evaluate past estimates, as well as to project more accurate figures for the future.

ALVIN CHENKIN

APPENDIX
