

Demographic

Jewish Population in the United States, 1966

THE JEWISH POPULATION of the United States is currently estimated at 5,720,000, a figure approximately identical with that reported for 1965. It reflects decreases in population estimates reported for individual communities on the basis of more current studies, as well as the elimination of duplication of community figures from several state totals.

In the past decade, 1956–1966, the totals reported in the successive volumes of the *AMERICAN JEWISH YEAR BOOK* showed an annual average growth rate of just under one per cent. This compares with the average annual growth of 1.5 per cent for the general population in the same period.

The lower growth rate for the Jewish population is compatible with conclusions drawn from individual community studies. However, the very approximate nature of these statistics must be emphasized because we lack both a firm “base” figure of Jewish population and usable statistics on Jewish births and deaths.

In the absence of such data, the estimates for the total United States Jewish population is based upon individual state estimates. These, in turn, are developed from individual community estimates, and adjusted for the unknown population living in communities with a Jewish population of less than 100.

The individual community estimates in Appendix Table 3 were obtained from member federations of the Council of Jewish Federations and Welfare Funds and from the files of the national United Jewish Appeal. Communities with fewer than 100 Jews have been omitted from this listing. They are, however, included in the state totals and are the base for estimating the unknowns (generally twice the number of known Jews in communities with fewer than 100).

NEW YORK CITY ESTIMATES

The estimates for New York City and Nassau, Suffolk, and Westchester counties are kept at 1962 levels (*AJYB*, 1963 [Vol. 64], pp. 57–59). The

1962 estimates were a modification of data obtained from a study conducted for the Federation of Jewish Philanthropies in 1959 (AJYB, 1961 [Vol. 62], p. 53), based on the so-called Yom Kippur technique (school absences on the High Holy Days) and relying in part on the special 1957 U.S. Census of New York City and its suburbs. Estimates for the general population growth in this area, covering the period 1962 through 1966, show an overall 3.5 per cent gain—2.3 per cent in New York City proper and 8.0 per cent in the suburbs. A comparison with the annual rates of increase, based on the excess of reported births over deaths, shows that in- and out-migration continued to be an important factor in population changes.* Thus, New York City's gain in population was below the level of its natural rate of increase (implying a net migration *out* of the city area); Nassau and Westchester counties are roughly in balance; Suffolk county's rate of growth is far in excess of its natural rate of growth (implying a net migration *into* the county).

The Jewish population may be assumed to share in these shifts, but the lack of quantitative information makes it impossible to evaluate the numbers involved. This caution should be borne in mind when using the New York City figures cited in Table 1.

URBAN AND RURAL DISTRIBUTION

The March 1957 U.S. Census survey on "Religion Reported by the Civilian Population of the United States" indicated that more than 95 per cent of the total Jewish population is distributed in urban areas (AJYB, 1965 [Vol. 66], p. 140).

Almost half (47 per cent) of the estimated total Jewish population in the United States resides in one area, the New York-Northeastern New Jersey standard consolidated area. This includes New York City, its immediate suburbs, and several counties in New York and New Jersey. The counties comprising this area, and their population estimates, are shown below:

TABLE A. JEWISH POPULATION IN THE NEW YORK-NORTHEASTERN
NEW JERSEY STANDARD CONSOLIDATED AREA

	<i>Jewish Population</i>
New York	
New York (five boroughs)	1,836,000
Nassau County	373,000
Suffolk County	42,000
Westchester County	131,000
Rockland County	8,625
New Jersey	
Essex County	100,000
Morris County	2,015
Union County	34,690

* Source: New York State Department of Health, *Monthly Vital Statistics Review*.

Hudson County	29,375
Bergen County	80,000
Passaic County	25,450
Middlesex County	23,025
Somerset County	2,500
TOTAL	<u>2,687,680</u>

Adding this total to the estimates for the nine next largest Jewish communities (Table 3), we find the combined total to be over 4,400,000, or slightly over three-quarters of the total estimated Jewish population in the United States.

CURRENT JEWISH POPULATION STUDIES

As a result of studies conducted in 1965, estimates for three major communities in the United States were adjusted.* Boston, carried for many years at 160,000, is now estimated—on a provisional basis—at 185,000. Los Angeles increased its estimate from 492,000 to 500,000. Milwaukee, which had maintained an estimate of 30,000 over many years, now estimates its Jewish population at 24,000. Since the full analyses of these studies have not yet been published, a description of their findings is deferred until next year. Preliminary data indicate certain salient similarities with the findings of earlier studies reported in the *AMERICAN JEWISH YEAR BOOK* (Vol. 66, pp. 142–46 and Vol. 64, pp. 59–69). These studies reported a smaller number of Jewish children in the 0–4 age group than in the 5–9 and 10–14 groups. Both Milwaukee and Los Angeles studies show that this trend is continuing.

The Los Angeles community, which owes much of its growth to in-migration, estimates a 53 per cent increase between 1959 and 1965 in the number of persons 60 years and older. The percentage of the total Jewish population in this age group has increased from 12 to 14 per cent.

A characteristic of Jewish communities, which appears to be independent of their size or location, is the high level of secular education. Since educational levels are very highly correlated with socio-economic status, it should be noted that preliminary results of the Boston and Milwaukee studies again demonstrate this finding. For the younger age group, which may be considered indicative of future trends in the Jewish community, Boston estimates that 78 per cent of those between the ages of 21 and 29 have attended college; in Milwaukee, the comparable figure for those aged 20 to 34 years is 83 per cent. The rate of college attendance for all adults is lower because it is affected by the older immigrant generation. But Boston, which distributed its adults by generation, found a college attendance rate of 70 per cent for the third and succeeding generations of all ages. Occupational patterns reported by Boston and Milwaukee are in consonance with these educational

* The author is grateful to the study directors, Dr. Fred Massarik (Los Angeles), Dr. Albert J. Mayer (Milwaukee), and Dr. Morris Axelrod (Boston), for making preliminary findings available to him. Responsibility for the data, as published, is the author's.

statistics, showing a much higher proportion of professional occupations among Jews than among the general population.

In Boston, the number of foreign-born adults was 20 per cent of the total; in Milwaukee it was 33 per cent. These proportions, of course, would be lower for the total population including children. Los Angeles reports that 41 per cent of its heads of household were born outside the United States. The larger proportion of foreign born in Los Angeles is probably due to the in-migration of older persons retiring to Los Angeles.

ALVIN CHENKIN

^a See p. 231.

^b These data are for July 1, 1966 and represent estimates of the total resident population of each state. Members of the armed forces abroad are excluded. There is therefore a slight difference between these data and the estimates for the Jewish population since most estimates of the latter include persons in the armed forces by civilian residence rather than by military residence.

^c Total U.S. population, including Armed Forces abroad, was 196,842,000.

¹ There are five different definitions of urban area in use: 1. *urban place* "includes all places of 2,500 inhabitants or more and the towns, townships, and counties classified as urban"; 2. *central city* is identical with the political boundaries of the incorporated city at the core of an urban area; 3. *urbanized area* includes at least one central city of 50,000 inhabitants or more as well as the closely-settled surrounding area; 4. *standard metropolitan statistical area* includes at least one central city of 50,000 inhabitants or more, together with the county or counties which are economically and otherwise oriented to the central city; 5. *standard consolidated areas* are several contiguous standard metropolitan areas and additional counties that appear to have strong interrelationships: e.g., the New York-Northeastern New Jersey and the Chicago-Northwestern Indiana standard consolidated areas.

The areas covered by the population estimates in Appendix Table 3 do not uniquely fit into any one of these census definitions. The Jewish estimates are based upon the service and campaign areas of Jewish federations, and these show wide variations. Mostly, but with many exceptions, the areas in appended Table 3 would be closest in concept to *urbanized area*. Specific information about the area covered by a particular estimate can often be obtained by writing directly to the appropriate federation. (See "Jewish Federations, Welfare Funds, Community Councils," p. 502.)
