

# Jewish Population in the United States, 2001

**B**ASED ON LOCAL COMMUNITY counts—the method for identifying and enumerating Jewish population that serves as the basis of this report—the estimated size of the American Jewish community in 2001 was approximately 6.1 million. This was over half a million more than the 5.5 million “core” Jewish population estimated in the Council of Jewish Federations’ 1990 National Jewish Population Survey (NJPS).<sup>1</sup> The NJPS 2000–01, conducted from August 2000 to August 2001, will provide a new national estimate (see below).

The difference between the national and aggregated local figures may be explained by the passage of time, varying definitions of “Jewishness,” disparate sample sources (lists, distinctive Jewish names, random digit dialing, etc.), and the lack of uniform methodology for local demographic research.

Analysis of the 1990 NJPS and other sources suggested that the population grew slightly during the late 1980s as the number of Jewish births exceeded the number of Jewish deaths. Extrapolation from the age structure, however, suggests that births and deaths were in balance by the late 1990s, creating a situation of zero population growth. It was only Jewish immigration into the U.S., particularly from the former Soviet Union, that provided growth in numbers.

The 1990 NJPS used a scientifically selected sample to project a total number of Jews in the United States as a whole, but could not provide accurate information on the state and local levels. Therefore, as in past years, this article contains local population estimates provided by knowledgeable local informants, and these serve as the basis for calculation of state and regional population counts.

Leaders at the approximately 200 Jewish federations that are part of the new philanthropic entity United Jewish Communities provided estimates of the Jewish population in their communities, the largest Jewish population centers. However, their service areas vary in size and thus may represent quite different geographic divisions: several towns, one county, or an aggregate of several counties. In some cases we have subdivided fed-

---

1. See Barry A. Kosmin et al., *Highlights of the CJF 1990 National Jewish Population Survey* (New York, Council of Jewish Federations, 1991).

eration areas to reflect more natural geographic boundaries or preferred U.S. Census definitions of metropolitan areas.

Local rabbis and other informed Jewish communal leaders provided estimates from small communities without federations. A form requesting the current population estimate was mailed to leaders of 57 such communities that had not provided an update in more than five years, and 34 replied. Five other requests were returned with indications that the synagogue, whose leader had previously provided an estimate, had either closed in recent years, moved without leaving a forwarding address, or could otherwise not be found. For communities that did not provide a current estimate, figures have either been retained from past years or extrapolations were made from the older data. The estimates requested from informants were for the resident Jewish population, including those in private households and in institutional settings. Informants were asked to exclude non-Jewish family members from the total.

The state, regional, and metropolitan totals shown in Appendix tables 1–3 were derived by summing the local estimates shown in table 4, including communities of less than 100, and then rounding to the nearest hundred or thousand, depending on the size of the estimate.

Because population estimation is not an exact science, the reader should be aware that in cases where a figure differs from last year's, the increase or decrease did not occur suddenly, but occurred over a period of time and has just now been substantiated. Recently completed local demographic studies are the primary sources for altering previously reported Jewish population figures in larger communities. The results of such studies should be understood as either an updated calculation of gradual demographic change or the correction of faulty older estimates.

In determining Jewish population, communities count both affiliated and nonaffiliated residents who are "core" Jews, as defined in NJPS 1990. This definition includes born Jews who report adherence to Judaism, Jews by choice, and born Jews without a current religion ("secular Jews"). A common method for estimating the population is to multiply the estimated number of households containing at least one self-defined Jew by the average number of self-defined Jewish persons per household. As stated above, informants were asked to exclude non-Jews living in Jewish households—primarily the non-Jewish spouses and non-Jewish children—from the 2001 estimates they provided which are reported below.

Only persons residing in a community for the majority of the year were included in local counts. In many Sunbelt and resort communities, the population increases during the winter months, but these part-year

residents were not included in these estimates. However, demographer Ira Sheskin notes that if we were to include residents who are present for at least three months per year, four Southeast Florida communities would increase as follows: Boca Raton-Delray Beach 30,000 (32 percent), Broward County 21,000 (10 percent), Miami-Dade County 11,000 (9 percent), and Palm Beach County (excluding Boca Raton-Delray Beach) 21,000 (20 percent). Many other Sunbelt communities, resort areas throughout the country, college towns, and communities with seasonally affected industries also become home to more Jews for part of the year, but there are no accurate data for such communities.

### *Local Population Changes*

The community reporting the largest numeric increase in 2001 was Ocean County, New Jersey, up 17,500 to 29,000. This 152-percent increase mainly reflected the relatively large and growing Orthodox community in the municipality of Lakewood, whose numbers were not fully reported in previous years. Columbus, Ohio, had the largest gain documented by a recent Jewish population study, a 41-percent increase from 15,600 to 22,000. The only other gain of at least 4,000 reported was in the primarily Satmar Hasidic village of Kiryas Joel in Orange County, New York. The 4,000 increase (27 percent) brought the county total to 19,000.

The largest percentage gain (328 percent) was in the Antelope Valley area in the northernmost part of Los Angeles County, California. The increase from 700 to 3,000 reflected general population growth as well as a new estimate of Jews, which had not been updated in many years.

Other places reporting increases of at least 1,000 were Long Beach, California; Fort Collins, Colorado; Westport, Connecticut; Bangor, Maine; and Houston, Texas. More modest increases were reported in San Luis Obispo, California; Greenwich, Connecticut; Athens, Georgia; Ocean City, Maryland; Pittsfield-Berkshire County, Massachusetts; Santa Fe, New Mexico; Chapel Hill-Durham and Hickory, North Carolina; Bend, Oregon; Charleston, South Carolina; and Madison, Wisconsin.

The largest numeric decline reported for any community was 8,000 in the Norfolk-Virginia Beach area of Virginia. A new demographic study in that community indicated that the previous Jewish population estimate of 19,000, which had not been changed in many years, was much too high. The next largest decline was 6,000 in Miami-Dade County, Florida, a 5-percent drop, reflecting losses mainly in Miami Beach. Baltimore's decline

of 3,100 to 91,400 was discovered in its recently completed demographic study. The decrease of 2,000 in Sarasota, Florida, was a correction of a faulty older estimate that had included all part-year residents. Three other communities had decreases of at least 1,000: Buffalo, New York; Akron, Ohio; and Richmond, Virginia. More modest declines were reported in Columbus, Georgia; Alexandria, Louisiana; Quad Cities, Illinois and Iowa; Terre Haute, Indiana; Wichita, Kansas; Taunton, Massachusetts; Omaha, Nebraska; North Hudson County, New Jersey; Binghamton, New York; Fargo, North Dakota; Youngstown, Ohio; Wilkes-Barre, Pennsylvania; and Burlington, Vermont.

The community of Paducah, Kentucky, previously included in Southern Illinois, is listed separately for the first time, as are Easton, Maryland, and Ketchum, Idaho.

### *Data on Metropolitan Areas*

In addition to detailed population figures by community, region, and state, information is provided for 50 metropolitan areas, rank-ordered by Jewish population (table 3). Included in this table are the Jewish percentage of each metropolitan area, its share of the U.S. Jewish population, and the cumulative share of the total Jewish population for communities up to that ranking.

In 1999, the United States Statistical Policy Office revised the definitions of many metropolitan regions and changed some names. Further, several Consolidated Metropolitan Statistical Areas (CMSAs) were designated as MSAs, and a few MSAs became CMSAs. Since 1998, when this analysis last appeared in the AJYB, the significant definitional changes relevant to this analysis were the inclusion of New Haven-Meriden, Connecticut, in the New York-Northern New Jersey-Long Island CMSA, the addition of Atlantic City to the Philadelphia-Wilmington-Atlantic City CMSA, and the incorporation of Worcester into the Boston-Worcester-Lawrence CMSA. The Statistical Policy Office also combined Baltimore and Washington, D.C., into one CMSA. However, because the Jewish communities in these two areas function independently and both have large Jewish populations—over 100,000—they are noted individually in the table.

The rankings of most metropolitan regions are similar to those of 1998, though in that year only the top 40 metros were listed. Significant shifts in ranking occurred for Portland-Salem (from 40 to 26), Milwaukee-Racine (from 25 to 31), Norfolk-Virginia Beach-Newport News (from 32 to 40) and Buffalo-Niagara Falls (from 27 to 36). Columbus, Ohio, which

would have been ranked 41 in 1998, is now 29. The only other community now appearing in the top 40 that was not listed in that group in 1998 is Austin, ranked 39. Prior to 1998, the table on metropolitan areas was presented in the 1995 AYJB. The most important change from that year until this report is that Las Vegas, then ranked 31, is now 14.

A central finding of the 2001 data was the continuing concentration of American Jews within a few metropolitan areas, a pattern quite different from that of the American population as a whole. One-third of the nation's Jews lived in the New York-Northern New Jersey-Long Island metropolitan region, which encompassed parts of four states. Yet despite this demographic dominance, the region's proportion of the Jewish population dramatically declined from conditions half a century earlier: in 1955, over half of U.S. Jews lived in the New York metropolitan region. The second largest Jewish population center in 2001 was the Los Angeles-Riverside-Orange County area, home to 11 percent of American Jews. Another 5 percent lived in the third largest Jewish community, Miami-Fort Lauderdale, Florida. Cumulatively, half of all U.S. Jews resided in these top three metropolitan areas, three-quarters lived in 11 communities, 90 percent in 31 communities, and 94 percent in the top 50. In striking contrast, only 17 percent of the U.S. total population lived in the three top metropolitan areas, and 50 percent in the 39 largest metros.

The fact that the number of communities comprising 90 percent of U.S. Jewry declined from 36 in 1998 to 31 in 2001 reflected primarily definitional changes and not greater concentration of the population. First, as noted above, two metro areas were absorbed into larger metros, and, second, the geographic coverage of several additional metros was enlarged.

The Jewish proportion of the total 2001 population in particular locales was noteworthy. The metropolitan area with the highest percentage of Jews remained West Palm Beach-Boca Raton, at 15 percent. New York-Northern New Jersey-Long Island and Miami-Fort Lauderdale were the only other metropolitan areas with a Jewish population density greater than 8 percent. In only four other areas—Las Vegas, Philadelphia-Wilmington-Atlantic City, Boston-Worcester-Lawrence, and Los Angeles-Riverside-Orange County—were Jews more than 4 percent of the population.

### *NJPS 2000-01*

Recognizing a need for current data, United Jewish Communities (UJC) sponsored a new National Jewish Population Survey (NJPS) that was the most comprehensive and sophisticated study ever conducted of

American Jews. So that the results should be representative of all American Jews, respondents were selected using random-digit-dialing techniques and a complex screening process. Interviews were conducted between August 2000 and August 2001. The questionnaire and overall study design were developed by the UJC Research Department in close collaboration with its National Technical Advisory Committee (NTAC), a distinguished group of 20 academicians and federation professionals with expertise in demography, sociology, religion, geography, economics, education, and other relevant disciplines.

The UJC Research Department worked closely with local federation planning, campaign, marketing, and other departments, as well as with the newly formed UJC "pillars," its lay leadership, in preparing the NJPS questionnaire. Interviewing was to have begun in early 2000, but was postponed until the second half of the year in order to give the pillars sufficient opportunity for input. Meetings were held with these groups, Jewish religious denominations, other major Jewish organizations, and other constituencies. The NJPS Board of Trustees provided the financial resources for conducting this effort, and the Federation Professional Advisory Committee provided guidance on issues of relevance to the federation system. The NJPS Steering Committee, comprised of the chairs of all the committees involved in the NJPS, set policy for the study. All of the aforementioned groups provided significant input to the development of the questionnaire. Focus groups were conducted to improve the introductory part of the interview and cognitively test the phrasing of questions. The questionnaire was extensively pretested for length, the most appropriate language, and correct skip patterns.

The NJPS 2000–01 respondents were adults 18 and older residing in the 50 United States. Nearly 4,500 people completed the Jewish questionnaire, and interviews were conducted with more than 650 people with Jewish backgrounds but who do not consider themselves Jewish. The sample was stratified by census region, metropolitan/non-metropolitan area, and then by zip code within each region. Areas of higher-density Jewish population were sampled at a higher rate than other areas so as to increase the pace of interviewing and reduce costs, with results weighted to ensure accurate projectability to the Jewish population.

The first UJC report of the findings was scheduled for fall 2002, with major presentations at the UJC General Assembly in November. NJPS 2000–01 will become the definitive source of data on the Jewish community during the first decade of the century. The information will help UJC, Jewish federations, denominations, and other organizations in the

Jewish community conduct communal planning, policy-making, resource development, Jewish education, scholarly research, and many other necessary functions.

Among the multitude of topics explored in NJPS 2000–01 are Jewish population size, socioeconomic characteristics, family structure, fertility, marital history, intermarriage, Jewish identification, religious practices, Jewish education, synagogue affiliation, philanthropic behavior, and relationship to Israel. UJC and others will underwrite a broad range of analyses based on NJPS results to guide the planning and policy-making of the Jewish community. NJPS 2000–01 is expected to deliver the critical data and analyses necessary for strengthening and enriching Jewish life in North America in the 21st century.

43. Richmond-Petersburg, VA . . . . .	13,000	1.3	.2	93.3
44. San Antonio, TX . . . . .	11,000	0.7	.2	93.5
45. Indianapolis, IN . . . . .	10,000	0.6	.2	93.6
46. Syracuse, NY . . . . .	9,500	1.3	.2	93.8
47. Charlotte-Gastonia- Rock Hill, NC-SC . . . . .	9,000	0.6	.1	93.9
48. Louisville, KY-IN . . . . .	8,500	0.8	.1	94.1
49. Memphis, TN-AR-MS . . . . .	8,500	0.7	.1	94.2
50. Ft. Myers-Cape Coral, FL . . . . .	8,000	1.8	.1	94.3

Designations for the metropolitan areas are in accordance with the United States Statistical Policy Office, Office of Management and Budget, Bulletin Number 99-04 and established June 30, 1999. All areas are Metropolitan Statistical Areas (MSA) except those designated with an asterisk (\*), which are Consolidated Metropolitan Statistical Areas (CMSA). The one exception to this rule is the Washington-Baltimore CMSA, which is separated.

N.B.: Details may not add to totals because of rounding.
