# 2014 Greater Miami Jewish Federation Population Study: <br> A Portrait of the Miami Jewish Community 

In your hands is a document that paints a portrait of the Miami Jewish community. It tells the story of our size, where we live, our practices, what we care about, and how we connect Jewishly. Every decade, the Greater Miami Jewish Federation Population Study of Miami-Dade County's Jewish community tries to answer these and many other questions. The results of this study allow Federation to adjust to new realities and plan for the long term.

We are pleased to present this Main Report of the study's findings on Miami's ever-evolving, robust and diverse Jewish community. The Miami Jewish community experienced a 9\% population growth over the past 10 years and has the highest percentage of foreign-born Jewish adults in the nation. We are also the community with the strongest connection to Israel in the US.

The 2014 Greater Miami Jewish Federation Population Study is not just a snapshot of who we are. It also serves as a valuable resource for Federation, our agencies, local synagogues and other Jewish organizations, to help them understand the makeup of our Jewish community and determine how to best meet the needs of their constituents. Federation ultimately applies the information gathered from the Population Study to fulfill our philanthropic and communal responsibilities.

This Population Study is the result of tireless efforts by the members of the Population Study Committee under the dedicated leadership of its Chair, Amy Berger Chafetz, and Michelle Labgold, Chief Planning Officer of the Greater Miami Jewish Federation. We offer our sincerest thanks to them for their commitment and intensive involvement throughout this important undertaking. Our community has been truly fortunate to have Ira M. Sheskin, Ph.D., a renowned authority on demographics and the Jewish community, as the Research Team Director for this project. Dr. Sheskin designed his research model using the most updated technology available and incorporating the valuable suggestions of the Committee. The outcome is a survey with the greatest possible degree of reliability and accuracy. The methodology used for this study is further explained in Chapter 2 of this Main Report.

We are proud of the successful completion of the 2014 Greater Miami Jewish Federation Population Study and look forward with determination to utilizing the data as a tool with which to improve the quality of Jewish life and to address emerging needs in Miami-Dade County. We are confident the information revealed through this study will be essential for Federation and all Jewish institutions in Miami, as we strive collectively to strengthen Jewish life and enhance connections to Jews in Miami, in Israel and worldwide.

We invite you to read these findings carefully and join us in shaping the future of Miami's Jewish community.

## Greater Miami Jewish Federation

On behalf of the Board of Directors of the Greater Miami Jewish Federation, we are pleased to present this Main Report of the comprehensive population study of Miami's Jewish community. This document paints a portrait of a community that is vastly diverse, with the highest percentage of foreign-born Jewish adults in the nation. It also describes a community that is deeply connected to Israel and to Jewish practice and ritual.

These data will serve as an invaluable resource for the Federation, our beneficiary agencies, and local synagogues and organizations to determine how to best meet the needs of our constituents and the community.

The 2014 Jewish Population Study is the result of tireless effort by the members of the Demographic Study Committee under the dedicated leadership of Amy Berger Chafetz. We offer our sincerest thanks to them for their commitment and intensive involvement throughout this important undertaking.

Our community has been truly fortunate to have Ira M. Sheskin, Ph.D. a renowned authority on demographics and the Jewish community, as study director for this commission. Dr. Sheskin designed his research model using the most updated technology available and incorporating the requests and concerns of the Committee. The outcome is a survey with the greatest possible degree of reliability and accuracy.

We are proud of the successful completion of this Main Report and look forward with determination to utilizing the data as a tool with which to improve the quality of Jewish life in Miami. We are confident that the information revealed through this study will be essential for Federation and all Jewish institutions in Miami as we strive collectively to advance Jewish life, build Jewish community and enhance connections to Jews in Miami, in Israel and worldwide.

Robert G. Berrin Chair of the Board

## Jacob Solomon Executive Vice President

## Acknowledgments

This is the fourth Jewish population study that I have had the pleasure to complete for the Miami Jewish community. I lived in this community from 1977 until 1993 and have worked in this community (at the University of Miami) from 1977 to the present. Although I now live in Broward County (about 10 minutes north of Miami), Miami remains my Jewish community. The most enjoyable part of my participation in this study is the knowledge that I have played a role in assisting in the strengthening of my own Jewish community.

I wish to acknowledge the assistance of the Jewish Population Study Committee (Amy Berger Chafetz, Chair) who assisted in the design of the project. Amy was active during all phases of the project. She is one of the best of the more than 40 Jewish Population Study Committee chairs with whom I have worked.

David Dutwin, Executive Vice President and Chief Methodologist at Social Science Research Systems (SSRS), is thanked for reviewing both the population estimate procedures and weighting factors.

The Jewish Population Study Committee was staffed by Michelle Labgold, Chief Planning Officer. Michelle's dedication to this project was obvious from our first meeting and I owe her a significant debt of gratitude for her work. In Michelle's office, Maayan Blum was largely responsible for collecting much of the data for the Jewish institutions survey. In a Jewish community with more than 80 synagogues, this was a major task and she deserves a special thank you. Shelley Eder, Assistant to Michelle Labgold, provided significant support.

Jacob Solomon, President and Chief Executive Officer, also played a key role in helping to shape the study. Jacob and I have worked together since about 1982 and his wisdom and commitment to the Jewish community is unmatched.

Robert G. Berrin, Chair of the Board of the Greater Miami Jewish Federation, asked a very important question at an early presentation of the results which led to the definition of The Central Region and some of the most important findings of the study.

My wife, Karen Tina Sheskin, M.S.Ed. (Community Counseling), deserves special recognition for her assistance in all stages of the project. She served as Assistant Field Supervisor and spent countless hours on many aspects of the project. A special thanks goes to my assistants, Roberta Pakowitz and Sarah Markowitz for their hard work on this project. This team of three assistants has been together for more than a decade bringing more than 60 years of experience with demographic studies to the project.

A special thank you goes to our interviewing team for their dedicated efforts and to all 2,020 respondents for agreeing to be interviewed. Also, more than 50 people participated in about 10 focus groups which helped us to design the questionnaire. Some of their suggestions for questions led to some of the more important results.

This project is dedicated to Fay Rosenblatt, who has worked on 21 different projects for me since 1990. She is unparallel in soliciting cooperation from elderly respondents and has always been a model interviewer (and is my mother-in-law!).

L'dor V'dor (From Generation to Generation), Ira M. Sheskin, Ph.D.

## Purposes of the Study

This is the Main Report arising from the 2014 demographic study of the Jewish population in the service area of the Greater Miami Jewish Federation. The study commenced in May 2013 and was completed in January 2015. Dr. Ira M. Sheskin of the University of Miami was engaged to undertake the effort. The project was funded by the Greater Miami Jewish Federation. Previous studies of this community were conducted by Dr. Sheskin in 1982, 1992, 1994, and 2004 and the results of these studies are available on www.jewishdatabank.org.

As shown by the recent Pew Research Center Survey on Jewish Americans, ${ }^{1}$ significant changes in the American Jewish community present major challenges. Research and planning based upon sound information have become essential components of the activities of the organized American Jewish community. Scientific Jewish community studies have been completed in more than 55 American Jewish communities since 1993 (Table 1-1), covering more than $85 \%$ of the more than 6.7 million American Jews counted in the American Jewish Year Book. ${ }^{2}$

National Jewish Population Surveys (NJPS) were conducted by the Council of Jewish Federations (which merged into United Jewish Communities) in 1971 and 1990 and by United Jewish Communities (now The Jewish Federations of North America) in 2000-01.

This study will assist the Greater Miami Jewish Federation, Jewish agencies, local synagogues, and Jewish organizations in developing the community's strengths and in designing projects and programs to address its needs. It will provide information to help the community set priorities and guide decision making for the next decade and beyond.

In many ways, the term demographic study is a misnomer, for studies such as this one are actually designed to collect information about more than just strict demographic factors. Thus, this is called a Jewish population study. This study has collected data about a broad range of demographic and geographic characteristics, religious and community involvement, service delivery, and philanthropic behavior. The relationship between the first three types of data (demographic, geographic, and religious) and service delivery and campaign information are of particular importance, as are issues of Jewish continuity. More specifically, this study was designed to collect information about the following:

[^0]- Jewish Population Size
- Geographic Distribution
-Geographic Profile
- Demographic Profile
- Religious Profile
- Membership Profile
- Jewish Education
- Jewish Agencies
- Social Service Needs
- Israel
- Anti-Semitism and Anti-Israelism
- The Media
- Philanthropic Profile

Three driving forces helped to define the need for, and the nature of, this study.
First, the $1990^{3}$ and 2000-01 ${ }^{4}$ National Jewish Population Surveys and the 2013 Pew Research Center study of Jewish Americans ${ }^{5}$ and their reports of significant rates of intermarriage and issues of Jewish continuity have seriously impacted the agenda of the American Jewish community. Concern about Jewish continuity is as great in Miami as in any other community. This study was designed, in part, to provide the Greater Miami Jewish Federation, Jewish agencies, local synagogues, and Jewish organizations with information to enable them to provide services and programs to contribute to the development of a Jewish community that will offer compelling reasons for all Jews to maintain their Jewish identity and remain active members of the community.

Second, complex decisions must be made by the Greater Miami Jewish Federation and Jewish agencies. Questions were asked which will assist the Greater Miami Jewish Federation and Jewish organizations and agencies that provide, or are concerned with, social and educational services. This study finds that the Jewish population of Miami is diverse demographically (with large numbers of both children and elderly) and, as a result, the social service network is critical to the continuing strength of the community. This study provides the data to help fine tune this network and prioritize the services offered.

Third, while the Greater Miami Jewish Federation plays a central role in Jewish fund raising, it is felt that there is potential for increased giving across the community. To help meet Jewish needs in Miami, Israel, and around the world, questions were designed to collect information helpful to financial resource development by the Jewish community.

[^1]
## Definitions of the Study Area and Geographic Areas

The study area includes all of Miami-Dade County, Florida. For purposes of geographical analysis, the study area is divided into three geographic areas (North Dade, South Dade, and The Beaches) and nine geographic subareas (see the map at the front of this report):

North Dade. This area includes all zip codes north of Flagler Street, but excludes the offshore islands south of Haulover Cut.
(1) North Dade Core East includes zip codes 33160 and 33180. Includes Aventura, Golden Beach, and parts of North Miami Beach.
(2) North Dade Core West includes zip codes 33162 and 33179. Includes Ojus and parts of North Miami Beach.
(3 Other North Dade includes zip codes 33010, 33012, 33013, 33014, 33015, 33016, 33018, 33054, 33055, 33056, 33122, 33125, 33126, 33127, 33132, 33136, 33137, 33138, 33142, 33147, 33150, 33153, 33161, 33166, 33167, 33168, 33169, 33172, 33178, 33181, 33182, and 33192. Includes Carol City, Hialeah, Hialeah Gardens, North Miami, Miami Shores, Miami Springs, Opa Locka, and parts of the City of Miami.

South Dade. This area includes all zip codes south of Flagler Street and the offshore city of Key Biscayne.

4 West Kendall includes zip codes 33031, 33032, 33033, 33034, 33035, 33170, 33173 , $33175,33176,33177,33183,33184,33185,33186,33187,33193$, and 33196. Includes Homestead and Florida City.
© East Kendall includes zip codes 33143, 33156, 33157, 33158, 33189, and 33190. Includes Pinecrest, South Miami, and parts of Coral Gables.
© NE South Dade includes zip codes 33114, 33128, 33129, 33130, 33131, 33133, 33134, 33135, 33144, 33145, 33146, 33149, 33155, 33159, 33165, and 33174. Includes Key Biscayne and parts of the City of Miami.

The Beaches. This area includes all offshore islands from Fisher Island to Haulover Cut.
(7) North Beach includes zip code 33154. Includes all areas north of $88^{\text {th }}$ Street, including Bal Harbour, Bay Harbor Islands, Indian Creek Village, and Surfside.

8 Middle Beach includes zip codes 33140 and 33141. Includes parts of the City of Miami Beach.
© South Beach includes zip codes 33109 and 33139. Includes parts of the City of Miami Beach.

The Central Area. This area includes zip codes 33127, 33128, 33129, 33130, 33131, 33132, 33136, 33137, and 33149. This is the area from Brickell to the Midtown area. It also includes Key Biscayne.

## DEFINITIONS

Key definitions of terms used throughout this report are provided below. Terms used only in certain chapters are defined within those chapters.

## - Jewish Person

A Jewish person is any person who currently considers himself/herself Jewish (or who is identified as such by the respondent) or who was born Jewish or raised Jewish and has not formally converted to another religion and does not regularly attend religious services of another religion (irrespective of formal conversion). Note that whether a person was born Jewish, was raised Jewish, or currently considers himself/herself Jewish is based on self-identification. A person who was born Jewish or raised Jewish (excluding any such person who has formally converted to another religion or who regularly attends religious services of another religion [irrespective of formal conversion]), but currently considers himself/herself to be secular, agnostic, atheist, non-practicing, non-religious, nonobservant, nothing, no religion, or a non-Western religion is considered to be Jewish. Adults (but not children) who consider themselves part Jewish are considered to be Jewish. Children who are part Jewish (being raised both Jewish and in another religion) are not considered to be Jewish when examining Jewish educational issues, but are counted in the overall count of Jews. Persons who are Messianic are not considered to be Jewish. Persons of Jewish background who do not consider themselves to be Jewish are not considered to be Jewish.

## - Jewish Household

A Jewish household is any household containing a Jewish person. See the "Definition of an Eligible Household" section in Chapter 2 for a list of exclusions.

## - Persons in Jewish Households

Persons in Jewish households are any persons (both Jewish and non-Jewish) living in a Jewish household. Some results in this report are shown for persons in Jewish households, while other results are shown only for Jewish persons or only for non-Jewish persons in Jewish households. Children who are temporarily away at school are included as persons in Jewish households. Paid Jewish employees living in a Jewish household are included as persons in Jewish households. Paid non-Jewish employees living in a Jewish household are not included as persons in Jewish households.

## - Jew-by-Choice

For adults, a Jew-by-Choice is any person age 18 or over who was not born or raised Jewish but currently considers himself/herself Jewish (irrespective of formal conversion). For children, a Jew-by-Choice is any person age 0-17 who was not born Jewish but is being raised Jewish (irrespective of formal conversion). Children who were not born Jewish but are being raised both Jewish and in another religion (part Jewish) are not considered to be Jews-by-Choice.

## - Born or Raised Jewish Adult

A born or raised Jewish adult is any Jewish person age 18 or over who was born or raised Jewish. Jews-by-Choice (since they were not born or raised Jewish) and persons of Jewish background who do not consider themselves to be Jewish (since they are not currently Jewish) are not considered to be born or raised Jewish adults.

## - Respondent

The respondent is the person in a Jewish household who was queried in the Telephone Survey. Some questions were asked of the respondent only, while other questions were asked of the respondent about the household or about other persons in the household. Some results in this report are shown for respondents only. Some results are shown for all respondents (both Jewish and non-Jewish), while other results are shown only for Jewish respondents. See the "Definition of an Eligible Respondent" section in Chapter 2 for procedural considerations.

## - Head of Household

In most cases, the respondent is the head of household. In cases in which the respondent is not Jewish, the Jewish spouse (or partner or significant other), Jewish parent, or other Jewish adult is generally designated as the head of household.

In households in which the respondent is an adult child, an elderly relative, or another member of the household who is clearly not the head of household, a Jewish head of household is designated at random from the husband and wife in the household or the single parent is designated as the head of household.

## - Age of Head of Household and Age of Respondent

Data are shown for the age of head of household when examining questions in which the head of household is instrumental in making a household decision (such as synagogue membership or charitable donations). Data are shown for the age of respondent when examining questions in which the respondent is expressing an opinion (such as emotional attachment to Israel) and questions asked only of the respondent (such as volunteering).

## - Children in Jewish Households and Jewish Children

Children in Jewish households are any persons age 0-17 (both Jewish and non-Jewish) living in a Jewish household. Jewish children are any persons age 0-17 living in a Jewish household who are identified by the respondent as being raised Jewish (irrespective of formal conversion). Children who are part Jewish (being raised both Jewish and in another religion) are not considered to be Jewish children, but are counted in the overall count of Jews. Some results in this report are shown for children in Jewish households or Jewish households with children, while other results are shown only for Jewish children or households with Jewish children. In a few cases, results are shown for Jewish and part Jewish children combined.

## - Part-Year and Full-Year Households

Part-year households are Jewish households who live in the study area for 3-7 months of the year. Full-year households are Jewish households who live in the study area for 8-12 months of the year. Visitor households are Jewish households who live in the study area for less than three months of the year.

## - FSU Households

FSU households are Jewish households in which an adult was born in one of the republics of the Former Soviet Union (FSU) or in which the respondent's location of residence prior to the study area was in the FSU.

- Hispanic Households, Sephardic Households, and Israeli Households

Hispanic households are Jewish households in which an adult considers himself/herself Hispanic. Sephardic households are Jewish households in which an adult considers himself/herself Sephardic. Israeli households are Jewish households in which an adult considers himself/herself Israeli.

## - Age Groups

Except as otherwise specified in this report, children refers to persons age 0-17, teenagers refers to persons age 13-17, adults refers to persons age 18 and over, non-elderly refers to adults under age 65, and elderly refers to adults age 65 and over.

## - Household Structure

Household with children refers to Jewish households containing children (both Jewish and non-Jewish) age 0-17 at home. Household with only adult children refers to Jewish households containing adult children (both Jewish and non-Jewish) age 18-29 (unless otherwise specified) at home and no children age 0-17 at home. Non-elderly couple household refers to two-person Jewish households containing a married couple in which the head of household is age 18-64. Non-elderly single household refers to one-person Jewish households containing a person age 18-64. Elderly couple household refers to twoperson Jewish households containing a married couple in which the head of household is age 65 or over. Elderly single household refers to one-person Jewish households containing a person age 65 or over.

## - Jewish Identification

With the exception of the data on the denomination of synagogue membership in Chapter 7, results reported for Orthodox, Conservative, Reconstructionist, Reform, and Just Jewish subgroups refer to the respondent's self-identification, not the denomination of synagogue membership. In cases in which the respondent is not Jewish, the Jewish identification is that of the Jewish spouse (or partner or significant other), Jewish parent, or other Jewish adult as reported by the non-Jewish respondent (in a proxy fashion). See the "Definition of an Eligible Respondent" section in Chapter 2 for more information on proxy responses.

## - Types of Marriage

(1) In-marriage: An in-marriage is a marriage in which both spouses were born or raised Jewish and currently consider themselves Jewish.
(2) Conversionary In-marriage: A conversionary in-marriage is a marriage in which one spouse was born or raised Jewish and currently considers himself/herself Jewish and the other spouse was not born or raised Jewish but currently considers himself/herself Jewish (irrespective of formal conversion).
(3 Intermarriage: An intermarriage is a marriage in which one spouse currently considers himself/herself Jewish and the other spouse does not currently consider himself/herself Jewish.

## - Jewish Organization

A Jewish organization is a Jewish organization other than a synagogue or Jewish Community Center. In querying whether anyone in the household is currently a member of a Jewish organization, respondents were given the examples of B'nai B'rith and Hadassah.

## - Jewish and General Trips to Israel

(1) Jewish Trip: A Jewish trip to Israel is a trip sponsored by a Jewish group, such as a Jewish Federation, Birthright, Jewish agency, synagogue, or Jewish organization. Households containing members who lived or studied in Israel (excluding households containing Israelis) are reported as households in which a member visited Israel on a Jewish trip. Households containing members who visited Israel on both a Jewish trip and a general trip are reported as households in which a member visited Israel on a Jewish trip.
(2) General Trip: A general trip to Israel is either a trip sponsored by a non-Jewish group or commercial company or a trip in which the household member visited Israel on his/her own or with family. Households containing Israelis are reported as households in which a member visited Israel on a general trip.

## - Jewish Federation Market Segments in the Past Year

Respondents were asked whether their households donated to the Greater Miami Jewish Federation (Jewish Federation) in the past year. If their households did not donate, the respondents were asked whether the Jewish Federation contacted them in the past year for the purpose of asking their households to donate. "Don't know" responses were treated as negative responses. From these two questions, three Jewish Federation market segments are developed:
(1) Donated to Federation: Includes households who reported that they donated to the Jewish Federation in the past year.
(2) Asked, Did Not Donate: Includes households who reported that the Jewish Federation asked them to donate in the past year but they did not donate.
(3) Not Asked: Includes households who reported that they did not donate to the Jewish Federation in the past year and were not asked to donate.

## - Donated to Jewish Federation in the Past Year

The variable Donated to Jewish Federation in the Past Year refers only to households who donated to the Greater Miami Jewish Federation. Households who donated only to Jewish Federations outside Miami are not included.

## - Median

The median is a measure of the central tendency of a distribution. For example, if the median age is 40 , then half of the population is under age 40 and half of the population is over age 40

## - Base

The base refers to the set of households or persons in a household about whom the results of each question on the Telephone Survey are reported. The base is the denominator used in calculating the percentages shown in the text and tables in this report. The base is shown either directly below the table title or in the column headings or row labels. Examples of bases used in this report include, among others, Jewish Households, Persons in Jewish Households, Respondents, Adults in Jewish Households, and Jewish Children Age 0-17.

## COMMUNITY COMPARISONS

$\square$n many cases this report compares Miami with other American Jewish communities (Table 1-1). About 200 Comparison with Other Communities tables are presented in this report. ${ }^{6}$

Reasons for Exercising Caution in Comparing Miami with Other Jewish Communities. The comparisons of Miami with other Jewish communities should be treated with caution for the following major reasons:
(1) Different Dates of the Studies. The Jewish community studies included in the comparison tables were completed over a 21 -year period. Differences between Place A in 1993 and Place B in 2014 may be due to the temporal differences in the community studies. For example, the intermarriage rate in Place A may be lower than in Place B simply because the community study in Place A was completed 21 years earlier, when intermarriage rates generally were lower. Obviously, this is an extreme example since most comparisons are between studies completed closer in time than in this example.
(2) Different Sampling Methods. Three different sampling methods generally have been used in Jewish community studies: a random digit dialing (RDD) only sample (drawn from randomly generated telephone numbers); an RDD sample combined with a Distinctive Jewish Name (DJN) sample (drawn from a telephone directory); and an RDD sample combined with a List sample (usually drawn from the local Jewish Federation mailing list). Only Jewish communities that used RDD sampling for at least part of the sample are included as comparison Jewish communities. Different sampling methods may lead to differences in survey results. Thus, the intermarriage rate in Place A may be lower than in Place B because the community study in Place A used RDD and List samples, where the List sample included proportionately fewer intermarried households, while the community study in Place B used an RDD only sample. (See the "Telephone Survey" section in Chapter 2 for a further discussion of RDD and List sampling methods.) Table 1-2 shows the sampling methods and sample sizes for each of the community studies included in the comparison tables.
(3 Different Questionnaires. A variety of questionnaires have been used in Jewish community studies. The survey research literature indicates that even small changes in question wording or in the sequence in which questions are asked on a telephone survey can have a significant impact upon survey results.
${ }^{6}$ Other comparison tables may be found in Ira M. Sheskin (2013). Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts Storrs, CT: Mandell Berman Institute, Berman Jewish DataBank and The Jewish Federations of North America at www.jewishdatabank.org. For older comparisons of Miami with other Jewish communities, see Ira M. Sheskin (2001). How Jewish Communities Differ: Variations in the Findings of Local Jewish Demographic Studies. New York: City University of New York, Berman Jewish DataBank at www.jewishdatabank.org.
(4) Small Sample Sizes. In general, when comparing the overall results for Jewish households or persons in Jewish households among the comparison Jewish communities, the sample sizes used in the community studies are such that results which are at least five percentage points apart may be considered to be statistically significantly different. On the other hand, when comparing the results among the comparison Jewish communities for population subgroups (such as households with children or respondents under age 35), the sample sizes may be considerably smaller such that even differences of 10-15 percentage points may not be considered to be statistically significantly different.

In summary, while problems do exist in comparing the results among the comparison Jewish communities, this researcher has every confidence that despite these problems community comparisons help provide an important context for understanding the Miami Jewish community.

Rules for Inclusion of Comparison Jewish Communities. To be included in the comparison tables, a community study had to meet the following major criteria:
© A telephone survey using an RDD sample had to be used for at least part of the sample and for the greater part of the geographic area served by the community's Jewish Federation.
(2) The study had to be completed since 1993, a 21 -year period. If a community completed multiple studies during this period, only the results of the most recent study are shown.
(3 A community had to have asked the questions addressed in the tables using wording similar to Miami and to have reported the results in a manner facilitating comparison. In some cases where the original results were not reported in a manner facilitating comparison, this researcher has obtained the original data and produced results that permit comparisons.
(4) A community had to have asked the questions addressed in the tables of the same set of households or persons in a household (base) as Miami. For example, if the question in Miami was asked of all persons in Jewish households, then only other Jewish communities querying this set of persons could be included in the table. Minor differences in the set of persons queried are noted in the footnotes to the tables. In some cases, communities for which the base is significantly different from that used in the table are listed below a thick horizontal line at the end of the table, with the alternative base noted. This is done for informational purposes only, and these communities are not included in the discussion of community comparisons.
© The community study report had to be made available to the Berman Jewish DataBank or this researcher.

Order of Communities in the Comparison Tables. Each comparison table is ordered based upon one particular data column (the ordered column), in descending order of magnitude of the data. Except for those comparison tables with only one data column, the ordered column has an italicized heading. The choice of ordered column is determined by the data thought to be most interesting. Thus, for example, the household size table is ordered by the percentage of single person households, and the employment status table is ordered by the percentage employed full time. While listing the communities in alphabetical order might simplify finding the results quickly for a particular community, such a presentation would be much less helpful in facilitating comparisons among the Jewish communities.

When two or more communities show the same percentage (or number) in the ordered column, three rules are followed to determine the order in which the communities are listed:
(1) The first rule applies when a secondary column is used to order the communities that show the same percentage in the ordered column.

In some cases, when the ordered column is the sum of two (or more) other columns, the communities are listed according to the community that has the higher percentage on the more "extreme" of the columns being summed. For example, if two communities show the same percentage for "always/usually," the community with the highest "always" percentage is listed first.

In other cases, a comparison table is ordered on a particular column, but a secondary "related" column is used to order the communities that show the same percentage in the ordered column. For example, in the employment status table, if two communities show the same percentage for "full time," the community with the highest "part time" percentage is listed first.

If the communities continue to show the same percentages after applying this rule, the process is continued using the next appropriate column.
(2) The second rule applies when the first rule is not applicable or does not resolve the situation, that is, the communities show the same percentages in all the data columns. In this case, the community with the most recent study is listed first.
(3) The third rule applies when the first two rules do not resolve the situation, that is, the communities also have the same year of study. In this case, the communities are listed in alphabetical order.

Communities for which the data are unavailable for the ordered column (but are available for other columns) are listed below a thick horizontal line.

Particularly Instructive Comparison Jewish Communities. It is believed that based on the recency of the study, geographic proximity of the community to Miami, similar size of the Jewish Federation Annual Campaign, or similar population size of the community, the following communities provide particularly instructive comparisons with Miami: Atlanta, Broward, Cleveland. New York, South Palm Beach, Washington, DC, and West Palm Beach (Table 1-1). These communities are shown in boldface type in the comparison tables.

Ranking of Miami Compared to Other Jewish Communities. For the data in the ordered column and such other data columns that are deemed to be most interesting in each comparison table, the text of the report indicates whether Miami is well below average, below average, about average, above average, or well above average compared to other Jewish communities. In some cases, Miami is identified as being among the highest or lowest of the comparison Jewish communities on a particular measure. These rankings are determined based upon the number of comparison Jewish communities, the relative magnitude of the values (usually a percentage) being compared, and the spread between the value for Miami and the median value for the data being compared. In general, if the value for Miami is within four percentage points of the median value, Miami is identified as about average. If the value for Miami is five to eight percentage points from the median value, Miami is identified as either above average or below average, or, if appropriate, as ranking among the highest or lowest of the comparison Jewish communities. If the value for Miami is more than eight percentage points from the median value, Miami is identified as either well above average or well below average, or, if appropriate, as ranking among the highest or lowest of the comparison Jewish communities.

Other Notes. The year for each community study reported in the comparison tables is the year in which the telephone survey was completed.

Comparative information for residents of Miami-Dade County (both Jewish and nonJewish) and all Americans (both Jewish and non-Jewish) was generally obtained from the 2013 American Community Survey (ACS) at www.census.gov. Note that the ACS data includes all persons in institutions while the data from the Telephone Survey excludes Jews in institutions without their own telephone number.

See www.jewishdatabank.org for copies of the questionnaires and community study reports for many of the comparison Jewish communities.

Most of the results for the comparison Jewish communities derive from the community study reports produced by this and other researchers. In some cases, as indicated above, the results for community studies not conducted by this researcher are based upon analysis of the data sets for these communities available at www.jewishdatabank.org.

${ }^{1}$ Includes number of Jews in institutions without their own telephone numbers where available. Estimates are for the year of the study. Current estimates may differ, see Ira Sheskin and Arnold Dashefsky (2014). "Jewish Population in the United States, 2014," in Arnold Dashefsky and Ira Sheskin (Editors) (2014) American Jewish Year Book, 2014, Volume 114 (Dordrecht: Springer) pp. 215-284 at www.jewishdatabank.org.
${ }^{2}$ As per report, includes about 100,000 persons who identify as Christian.
${ }^{3}$ As per report, includes almost all children in Jewish households with at least one Jewish parent.
${ }^{4}$ Population estimates are for New Castle County (Wilmington and Newark). In addition, the Jewish Federation of Delaware serves the remainder of the state with 2,200 Jewish households, 5,000 persons in Jewish households, and 3,200 Jews.

## Notes:

1) For a detailed description of the geographic extent of each community, consult the community study reports available at www.jewishdatabank.org. All study areas correspond to the local Jewish Federation's service area. Study areas range in size from the better part of a county to multi-county areas.
2) Data are reported for the Year of Study. Current population estimates may differ.
3) Only Jewish community studies conducted since 1993 that used random digit dialing (RDD) sampling for at least part of the sample and for the greater part of the geographic area served by the community's Jewish Federation are listed.

* Distinctive Jewish Name (DJN) sampling was supplemented with Russian Jewish (First) Name (RJN) sampling.
${ }^{1}$ Except as noted, the list sample is drawn from the Jewish Federation mailing list, sometimes combined with sampling from synagogue and organizational mailing lists.
${ }^{2}$ List sample was drawn from synagogue member lists.
${ }^{3}$ Distinctive Jewish Name (DJN) sampling was supplemented with Distinctive Sephardic Name (DSN) sampling.
Note: Only Jewish community studies conducted since 1993 that used random digit dialing (RDD) sampling for at least part of the sample and for the greater part of the geographic area served by the community's Jewish Federation are listed.

## COMPARISONS WITH NJPS 2000-0 1

Many of the comparison tables include results from the 2000-01 National Jewish Population Survey (NJPS 2000). This researcher believes that community comparisons based upon local community studies are more instructive than comparisons with NJPS 2000.

The NJPS 2000 questionnaire was administered to 4,523 respondents who represent the 5.1 million American Jews estimated by the study who live in households. Of the 4,523 respondents, 4,220 respondents (representing 4.3 million more Jewishly-connected American Jews) received a longer 43-minute questionnaire. The other 303 respondents (representing 800,000 less Jewishly-connected American Jews who live in households) received a 21-minute questionnaire. The shorter questionnaire consisted of a subset of questions from the longer questionnaire, omitting many questions about Jewish identity. As a result, the NJPS 2000-01 results for most demographic measures presented in this report (Chapters 4-5) represent all 5.1 million American Jews who live in households, while the NJPS 2000-01 results for most Jewish identity measures presented in this report (Chapters 6-8 and 11-14) reflect only the 4.3 million more Jewishly-connected American Jews. Results on Jewish identity measures for the more Jewishly-connected sample are, in most cases, more positive than they would have been had these data been collected from all respondents representing the 5.1 million American Jews who live in households. An additional 100,000 Jews were estimated by the study to live in institutions for a total NJPS 2000-01 estimate of 5.2 million American Jews. See www.jewishdatabank.org for more information on the NJPS 2000-01 methodology.

In the comparison tables, NJPS 2000-01 results shown for the more Jewishly-connected sample, reflecting the 4.3 million American Jews, are footnoted. In the text, NJPS 2000-01 results are referred to as nationally in comparison to Miami results, using the phrase "the xx\% [Miami results] compares to xx\% nationally [NJPS 2000 results]."

## COMPARISONS AMONG POPULATION SUBGROUPS

Throughout this report, in the tables showing selected crosstabulations by population subgroup, comparisons are made between the percentages for particular population subgroups, such as geographic area and age, and the overall percentage for Miami as a whole shown in the first row of each table.

In general, the percentage for a particular population subgroup in a particular table is identified as being much higher or much lower than the overall percentage if that percentage differs by at least ten percentage points from the overall percentage. For example, if the overall percentage of Jewish respondents who identify as Orthodox is 11\% and $24 \%$ of respondents in synagogue member households identify as Orthodox, then the percentage of respondents in synagogue member households who identify as Orthodox be identified as being much higher than the overall percentage because $24 \%$ is at least ten percentage points higher than $11 \%$.

An exception to this guideline is made when the sample size for a population subgroup is less than 50. In such cases, the percentage for a particular population subgroup in a particular table is identified as being much higher or much lower than the overall percentage if that percentage differs by at least 20 percentage points from the overall percentage.

A second exception to this guideline is made when the overall percentage is less than $10 \%$. In such cases, subjective judgment is used in determining what constitutes much higher or much lower.

A third exception to this guideline is made in Chapter 5 of this report, where differences as large as ten percentage points are rare for many of the demographic measures reported therein. In such cases, subjective judgment is used in determining what constitutes much higher or much lower.

## Reading the Tables

Percentage distributions for each question in the Telephone Survey are shown in a table, along with selected crosstabulations by various population subgroups such as geographic area, length of residence, age, sex, household structure, household income, Jewish identification, type of marriage, synagogue membership, Jewish Community Center membership, Jewish organization membership, formal and informal Jewish education of respondents as children, and such other variables as are deemed relevant.

In some tables, "don't know" responses are included in the computations, while in other tables they are excluded. The inclusion or exclusion of "don't know" responses depends on whether the "don't know" is a statement of value (generally included) or merely an inability to remember or a refusal to respond (generally excluded). In some tables, "don't know" responses are treated as negative responses. Missing responses are excluded from the tables.

Three important items of information are shown in each table of Miami data: the sample size, or actual number of interviews obtained for a particular population subgroup, the projected number of Jewish households (or persons, adults, children, married couples, etc.) for a particular population subgroup, and the base (set of households or persons queried), or denominator used in calculating the percentages (shown either directly below the table title or in the column headings or row labels).

Data for population subgroups with sample sizes of less than 25 are generally omitted from the tables. See the "Sample Size and Margin of Error" section in Chapter 2.

When reading the tables, percentages and corresponding numbers add down when the percent signs appear across the top of the columns, and percentages and corresponding numbers add across when the percent signs appear down the first column.

In instances where a single percentage is shown in a table, this percentage is essentially the percentage of households (or persons, adults, children, married couples, etc.) about whom a question was answered in the affirmative. In instances where every percentage in a table is shown with a percent sign, it means that each percentage is calculated on an independent base. In instances where percent signs are shown in columns surrounded by thick vertical lines, it means that these percentages are summed or calculated based upon information in the other columns in the table.

Demographic data are easily misunderstood. The data in the text and tables in this report should be examined carefully. The most common error in interpretation occurs when readers do not concentrate on the nature of the denominator (or base) used in calculating a percentage. As an example, note that this study reports that $12 \%$ of Jewish respondents in North Dade identify as Orthodox. Yet, 62\% of Jewish respondents who identify as Orthodox live in North Dade. The base in each table is shown either directly below the table title or in the column headings or row labels.

Another common error is to interpret results in terms of the number of households when results are shown in terms of the number of persons, or vice versa. Also, some of the results in this report are shown for persons in Jewish households (both Jewish and nonJewish), while other results are shown only for Jewish persons or only for respondents.

## Typographic Devices

$\checkmark$ A check mark is used to indicate that information appears in the text which cannot be determined from the tables.

White numbers in black circles ( $\mathbf{( 1 , \boldsymbol { e } , \boldsymbol { 3 } , \text { etc.) are used in the column headings or row }}$ labels of tables to indicate that definitions of the terms are provided in the text of that particular chapter.
$\rightarrow$ An arrow is used in some tables to designate a row which is a combination of the rows just above it. For example, the row "65 and over" is a combination of the rows "65-74" and "75 and over."

A pointing finger is used to designate a row which is a subgroup of the row immediately above it. For example, the row "Intermarried with Jewish Children" is a subgroup of the row "Intermarried."

Boldface type is used to draw the reader's attention to particularly instructive comparison Jewish communities in the comparison tables. Boldface type also is used to draw the reader's attention to small sample sizes (sample sizes of 25-49) in the tables showing crosstabulations by population subgroup. See the "Sample Size and Margin of Error" section in Chapter 2 for a discussion of small sample sizes.

Italics is used to indicate the column on which a comparison table is ordered.

## Rounding of Numbers and Percentages

The reader may notice small differences in the percentages and numbers of households and persons shown in various parts of this report due to rounding. At times, also due to rounding, the reported percentages may not sum to $100 \%$ and the reported numbers may not sum to the appropriate numerical total. However, the convention employed shows the total as $100 \%$ or the appropriate numerical total.

Although most percentages for Miami presented in the tables are shown to the nearest tenth and most numbers are shown to the nearest integer, it should be noted that all percentages and numbers are estimates.

Jewish Institutions Survey. ..... 2-17

> Without understanding there is no knowledge; without knowledge there is no understanding.

This study of the Miami Jewish community consisted of a Telephone Survey of 2,020 Jewish households in Miami and a Jewish Institutions Survey.

## Questionnaire Design

The questionnaire was designed through a cooperative effort by the Demographic Study Committee, Greater Miami Jewish Federation staff, community rabbis, Jewish agency executives and lay leadership, and Dr. Ira M. Sheskin of the University of Miami. Focus groups about questionnaire content were held with the Campaign Cabinet, the Center for the Advancement of Jewish Education, the Day School Committee, Israel \& Overseas, Israel programs, the Jewish Community Relations Council, Jewish Federation agencies, the Latin Division, the Planning \& Distribution Committee, the Rabbinic Association, The Tribe, and The Network.

## Telephone Survey

consistent with many other Jewish community studies, this study involved a Telephone Survey with a random digit dialing (RDD) sample combined with a list sample from the Greater Miami Jewish Federation mailing list supplemented with phone numbers from a group called The Tribe (www.thetribe.org). In total, 2,020 20-minute telephone interviews were conducted, including 590 interviews from the RDD sample (both landlines and cell phones) and 1,430 interviews from the List sample.

The sample size of 2,020 is adequate so that we can be $95 \%$ certain that the margin of error for the overall results (the results when examining all 2,020 interviews) is no greater than $\pm 2.2 \%$. When results are not based upon the total sample size of 2,020 (for example, when results are presented for households with elderly persons), the margin of error is greater than $\pm 2.2 \%$. (See the "Sample Size and Margin of Error" section in this Chapter for more information.) The 2,020 interviews represent 3.6\% of the 55,700 Jewish households in Miami.

RDD Sample. The RDD methodology is necessary for a study to obtain results that accurately represent a population. The major advantage of this methodology is that it produces a random sample of Jewish households to be interviewed. When done well, the RDD methodology will yield a high survey cooperation rate (the percentage of households who identify themselves as containing one or more Jewish persons who agree to be interviewed). The RDD methodology also guarantees anonymity to respondents.

An important aspect of the RDD methodology is that it provides the ability to interview households who are not listed in the telephone directory. The RDD methodology facilitates calling households who have recently migrated into the study area and other households whose telephone numbers are not yet published in the local area telephone directory. Perhaps more importantly, the RDD methodology does not rely upon Jewish households making themselves known to the Jewish community by joining a synagogue, a Jewish Community Center, or other Jewish organizations, or by donating money to a Jewish fund raising campaign, which would result in a sample that is inherently biased toward more

Jewishly-connected households. Thus, a more accurate representation of the Jewish community should be obtained with the RDD methodology than with telephone directory methods or methods that rely upon randomly selecting households from Jewish organization mailing lists.

The RDD Telephone Survey proceeded as follows. For all six digit area code/telephone exchange codes in the study area, four-digit random numbers were generated by a computer to produce ten-digit telephone numbers. These numbers were purchased from Survey Sampling International of Fairfield, Connecticut. When a number was dialed, there was no guarantee that a household, let alone a Jewish household, would be reached. In fact, 100,000 different numbers were dialed more than 140,000 times to obtain the 590 RDD interviews. This is a yield rate of $0.6 \%$ ( 590 divided by 100,000 ). The remainder of the numbers dialed were either disconnected, not in service, changed to unlisted or other listed numbers, business numbers, government numbers, fax machines, non-Jewish households, ineligible Jewish households, not answered by a person after multiple attempts, or answered by persons who refused to respond to the screener (the introduction to the survey which determined if we were speaking with a Jewish household-see Appendix A) or who refused to cooperate with the survey. In total, 83\% (the screener cooperation rate) of households reached cooperated with the screener to identify whether the households were Jewish or non-Jewish. This compares to $90 \%$ in 2004. Of the Jewish households reached, $75 \%$ (the survey cooperation rate) cooperated with the survey. This compares with $86 \%$ in 2004 . These types of decreases in cooperation rates are being experienced throughout the survey research industry.

Of the 590 RDD surveys, 71 were completed on cell phones.
GMJF List Sample. After the completion of the RDD Telephone Survey, an additional 1,430 telephone interviews were conducted with households on the Greater Miami Jewish Federation mailing list. The GMJF list was first supplemented with households from The Tribe to eliminate the traditional bias due to the fact that Jewish Federation mailing lists contain a disproportionately low percentage of younger people.

This allowed us to call households with cell phones at a far more reasonable cost than with RDD, where the 71 RDD cell-phone interviews took about 10 hours each to complete. Of the 1,430 List surveys, 600 were completed on landlines; 294 on cell phones with non-local area codes (not 305 or 786), and 536 on local cell phones (with a 305 or 786 area code).

In total, 590 surveys were completed via RDD and 1,430 via list. 1,119 were completed on landlines and 901 on cell phones.

## WEighting of The Sample

Five different sets of weights were sequentially applied to the survey results to adjust for biases inherent in the survey process.
(1) Multiple Telephone Numbers. The number of valid telephone numbers (landline plus cell) in each household interviewed was queried. Because households with multiple telephone numbers had more than one chance to be included in the RDD survey, appropriate weighting factors were applied to eliminate this bias. Weights of 0.5 were applied to households with two telephone numbers. Weights of 0.33 were applied to households with three or more telephone numbers.
(2) Geographic Bias. For the first 20,000 RDD telephone numbers dialed, all telephone exchange codes in the Greater Miami Jewish Federation service area were included in the sample. However, for budgetary reasons, the calling area was then restricted such that the more densely-settled Jewish areas were over sampled. Appropriate weighting factors were applied to adjust for the geographic bias introduced by this over sampling.
(3) Cell Phone Numbers. Based upon the answers to survey questions about the number of landlines and cell phones in Jewish households, weights were added to merge the landline RDD and cell RDD samples.
(4) Out of Area Cells. From the Federation list, out of area cell phones were oversampled. Weights were added to the Federation list sample to adjust this.
(5 Mailing List Bias. The List sample was compared to the RDD sample on a number of key variables: geographic area, at least one adult in the household is a Hispanic Jew, age of the head of the household, household size, household structure, length of residence, household income, Jewish identification (Orthodox, Conservative, Reconstructionist, Reform, Just Jewish), type of marriage (in-married, conversionary in-married, intermarried), synagogue membership, Jewish Community Center membership, familiarity with the Jewish Federation, visits to Israel, and donated to the Jewish Federation in the past year.

Because it would be expected that the Jewish Federation mailing list would contain a disproportionate percentage of synagogue members, JCC members, respondents who are very familiar with the Jewish Federation, and households who donated to the Jewish Federation in the past year, weights were added to adjust these percentage so that (using chi-square tests) each was within the margin of error of the RDD results for these questions.

## Definition of an Eligible Household

An eligible household is one that contains at least one person who is Jewish as defined in the "Definitions" section in Chapter 1. The following were excluded from the study:
(1) Persons in institutions, such as nursing homes, who do not have their own telephone numbers at bedside.
(2) Households without telephones. In Miami-Dade County, 1.35\% of all households (both Jewish and non-Jewish) do not have telephones. This percentage is probably lower, and negligible, for Jewish households.
(3) Households containing no persons capable of being interviewed due to physical (including hearing impairments) or mental health limitations.

## DEFINITION OF AN ELIGIBLE RESPONDENT

No procedure was used to select a person at random to be interviewed within each Jewish household in Miami. Rather, an attempt was made to interview a Jewish person within each household who was age 18 or over. The only known bias resulting from this procedure was that $60 \%$ of respondents were female, whereas $53 \%$ of adults in Jewish households in Miami are female. Because all basic demographic and education questions are asked about all adults in the household, this bias does not influence the results in any significant manner. Where the reported results are based on the respondent's own behavior, such as volunteerism, or on his/her opinion, such as the perception of antiSemitism, results are shown separately for males and females.

Any respondent age 18 or over who identified himself/herself as Jewish was interviewed. In households containing non-Jewish members, the Jewish member was interviewed whenever possible because some questions are not applicable to non-Jews.

Note that the respondent in $1.5 \%$ of the 2,020 interviews was not Jewish. In almost all of these cases, the respondent was the non-Jewish spouse, partner, or significant other of a Jewish adult. In most cases, questions that were respondent-only questions were asked of the non-Jewish respondent on behalf of the Jewish household member (in a proxy fashion). A few attitudinal questions were not asked of non-Jewish respondents.

Non-Jewish household members were generally interviewed in two situations. First, in some cases, the Jewish household member would not cooperate with the survey, but the non-Jewish household member would. Second, in some cases, the Jewish household member was simply unavailable at the time of the survey.

## FiELD Work

$\square$nterviewers from the Miami Jewish community were found locally via advertisements placed in the Jewish newspaper and in synagogue and Jewish organization bulletins, flyers distributed to Jewish day school and supplemental school teachers, posters placed in prominent locations in Jewish institutions, and announcements sent to Jewish college students (particularly via e-mail), and from among current Jewish community employees. ParnossahWorks Miami was particularly helpful. This procedure for recruiting interviewers resulted, for the most part, in Jews calling other Jews, which is essential in gaining respondent cooperation and quality interviews. More than 200 persons inquired about the interviewer positions. All interviewers were themselves interviewed for the positions.

Two four-hour training sessions were held for interviewers at the Federation building and at the University of Miami prior to the commencement of the survey. A 33-page training manual and a copy of the questionnaire were provided to each interviewer via e-mail prior to the training session. The team consisted of 38 interviewers who were paid $\$ 18$ per hour. Each interviewer averaged about 50 completed interviews. The interviews averaged about 20 minutes each.

The Telephone Survey commenced on January 17, 2014 and continued through February 16, 2014. To facilitate contacting respondents, each telephone number was dialed up to four times: at least once in the early evening, at least once later in the evening, at least once on a Sunday, and once during the day on a weekday. Once a respondent was known to be Jewish and had indicated some degree of cooperation, as many as 20 calls were made in an attempt to conduct an interview. More than 900 of the 2,020 interviews were completed by appointment.

Interviews were conducted from 10:00 a.m. to 9:30 p.m. No interviews were conducted on Friday evening or Saturday. The Telephone Survey was conducted from the Jewish Federation building. Because personal questions were asked, each interviewer was required to sign an Ethics Statement, modified from the Code of Professional Ethics and Practices of the American Association of Public Opinion Research. To assure confidentiality, interviewers did not use their surnames, and respondents were not asked for their names or addresses.

The high survey cooperation rate (83\%) may be attributable, in part, to the effort made to convert refusals. Initial refusals were called back at least two more times. In some cases, Dr. Sheskin or the Assistant Field Supervisor personally explained the purpose of the study to reluctant respondents.

Most interviews were conducted in English, but 44 were conducted in Spanish, 6 in Russian, and 2 in Hebrew.

## PUBLICITY

Apost card about the study was sent to all Jewish households and an e-mail was sent to all known Jewish households. Advertisements were placed in the local Jewish newspaper and synagogue bulletins. Letters were sent to all local area rabbis, synagogue presidents, and Jewish institutions. Flyers were distributed around the community. Pulpit announcements were distributed to all local synagogues. A billboard was placed at the entrances to the Jewish Community Centers. The purpose of this publicity was to notify potential respondents that they might be contacted to participate in the study and to make them more receptive and cooperative.

## Relationships Between Variables

An important distinction must be made between correlation and cause and effect. Simply because a correlation-a relationship-is found between two variables, it does not necessarily imply that one causes the other. Thus, because one finds a relationship between, for example, synagogue membership and charitable donations, it does not necessarily imply a cause and effect relationship. That is, if it is shown that synagogue members are more likely to donate to charities, it does not imply that joining a synagogue causes one to be more philanthropic. Separately, it could be that higher income households are more likely to both join a synagogue and be philanthropic. That is, the relationship shown between synagogue membership and charitable donations could actually reflect a relationship between synagogue membership and household income and between philanthropy and household income.

## Creation Versus Collection of Data

Surveys often create data rather than collect it. That is, persons are asked to think about some issues that they have probably not thought about before in quite the same way (terms such as definitely and very familiar). Also, groups of people react to questions in varying ways. Thus, if one finds a significant difference between, for example, the responses of the elderly and the non-elderly, it may be due to a real difference in attitudes between the two subgroups resulting from the different environments in which the two subgroups matured, or to a real difference in experiences between the two subgroups. On the other hand, the difference may very well be attributable to the varying manner in which persons of different ages respond to questions.

## Sample Size and Margin of Error

since this study of the Miami Jewish community is based upon a sample of the total Jewish population of Miami, the results are subject to sampling error. Sampling error is an estimate of random variation of a sample statistic around its true population parameter, which would be obtained if data were collected from every Jewish household in Miami. Sampling error does not bias our estimates, but defines a margin of error around each percentage.

For example, a sample size of 400 is needed so that one can be $95 \%$ (the confidence level) certain that no reported percentage varies by more than $\pm 5.0 \%$ (the margin of error). That is, with 400 interviews, if $50 \%$ of respondents were to report that, for example, someone in their household visited Israel, one could be 95\% certain that if every Jewish household in the area were interviewed, we would find that the percentage of respondents who reported that someone in their household visited Israel lies between 45\% and 55\% ( $50 \% \pm 5.0 \%$ ).

The margin of error is widest around percentages that are near 50\%. As percentages approach the extremes of $0 \%$ or $100 \%$, the sampling error decreases and the width of the margin of error narrows. For example, with a sample size of 400 , if $90 \%$ of respondents answered yes to a question, the margin of error would be $\pm 3.0 \%$ rather than the $\pm 5.0 \%$ in the above example.

Table 2-1 indicates that, given a percentage from the survey sample and the sample size on which the percentage is based, chances are that 95 times out of 100, the real population percentage (if the whole Jewish population was interviewed) would lie within the range defined by adding and subtracting the number indicated in the body of the table to the percentage obtained from the sample.

Consider the following as an example of the use of Table 2-1. Suppose that $26 \%$ of a particular population subgroup (Jewish non-elderly single households) reported that they visited Israel. Further suppose that the survey included 77 interviews with Jewish nonelderly single households. In Table 2-1, the row labeled $25 \%$ or $75 \%$ would be consulted because $26 \%$ is closest to $25 \%$. The column labeled as having a sample size of 75 would be consulted because 77 is closest to 75 . The number at the intersection of the $25 \%$ or $75 \%$ Estimated Percentage row and the 75 Sample Size column is $10 \%$. The conclusion is that one could be $95 \%$ certain that if every Jewish non-elderly single household in the area were interviewed, we would find that the percentage who visited Israel lies between $16 \%$ and $36 \%(26 \% \pm 10 \%)$. As implied by this example, the margin of error around a percentage based upon a small sample can be very wide. Thus, because of limited sample sizes and the wide margins of error they imply, it is not always possible to show in this report detailed analyses for every combination of variables and population subgroups that one might desire.

Due to the very wide margins of error around sample sizes of less than 25 , results for population subgroups with sample sizes of less than 25 are rarely shown in this report.

Statistical significance tests are not included in this report. While useful to social scientists, such tests would not be very informative for most readers.

| TABLE 2-1 <br> Margins of Error Around Percentages (95\% CONFIDENCE LEVEL) |  |  |  |  |  |  |  |  |  |

## Significant Differences Between Percentages

T
ables 2-2 to 2-7 allow for the comparison of percentages for two population subgroups. The tables indicate the approximate size of the difference between two percentages that must exist to conclude that a statistically significant difference exists between the two percentages.

As can be observed from Tables 2-2 to 2-7, the size of the difference between two percentages that must exist to conclude that a statistically significant difference exists is dependent upon two factors. First, the larger the sample size for each of the two subgroups, the smaller the difference in the percentages must be between the two subgroups to achieve statistical significance. Second, the closer the percentages are to 0\% or $100 \%$, the smaller the difference in the percentages must be between the two subgroups to achieve statistical significance.

Consider the following as an example of the use of Tables 2-2 to 2-7. Suppose that 45\% of households under age 65 (Group 1) and $55 \%$ of households age 65 and over (Group 2) practice a particular ritual. Further suppose that 400 interviews were conducted in Group 1 and 300 interviews were conducted in Group 2. Consulting Table 2-7 for percentages around $50 \%$, for a Group 1 sample size of 400 and a Group 2 sample size of 300, the two percentages must be at least 7.5 percentage points apart for one to conclude that the two percentages are statistically significantly different. In this example, the two percentages ( $45 \%$ and $55 \%$ ) are 10 percentage points apart. The conclusion is that one could be $95 \%$ certain that if every Jewish household in the area were interviewed, we would find that households age 65 and over are more likely to practice this particular ritual than are households under age 65.

Statistical significance tests are not included in this report. While useful to social scientists, such tests would not be very informative for most readers.

See the "Comparisons Among Population Subgroups" section in Chapter 1 for a discussion of the much higher and much lower designations used throughout this report to discuss differences between percentages.

## JEWISH INSTITUTIONS SURVEY

Brief surveys, comprising the Jewish Institutions Survey, were administered to the synagogues in Miami, the Jewish Community Centers in Miami, the Jewish day schools in Miami, and the Greater Miami Jewish Federation. The results appear in Chapters 4, 7, 8, and 14.

Synagogue Survey. The Synagogue Survey was completed by the executive director, rabbi, synagogue president, or another member of the synagogue staff of each synagogue.

The Synagogue Survey queried the number of member households in 2014 and information on synagogue mergers. Also collected were preschool/child care, supplemental school, and day camp enrollments, and the number of participants in Jewish teenage youth groups in 2014.

Jewish Community Center (JCC) Survey. The JCC Survey was completed by the executive directors of each of the JCCs in Miami.

The JCC Survey queried the number of Jewish member households in 2014 and preschool/child care and day camp enrollments in 2014.

Jewish Day School Survey. The Jewish Day School Survey was completed by the principal or executive director of each Jewish day school in Miami.

The Jewish Day School Survey queried Jewish day school enrollments by grade in 2014.
Jewish Federation Survey. The Jewish Federation Survey was completed by the Director of Planning and Community Development of the Greater Miami Jewish Federation with assistance from Jewish Community Services.

The Jewish Federation Survey queried the number of Jews without telephones in nursing homes, group quarters for mentally handicapped persons, group quarters for physically handicapped persons, prisons, and military bases, if any; the number of Jewish students in college dormitories whose parents do not live in Miami; and the number of participants in independent Jewish teenage youth groups in 2014. Also collected were data on the current number of Jewish households on the Jewish Federation mailing list by zip code as well as the number of Jewish donors to the Annual Campaign, number of Jewish households who donated to the Annual Campaign, and amount raised by the Annual Campaign for each year from 2004-2014.

(Numbers 1:2)

## Current Size and Geographic Distribution OF THE JEWISH COMMUNITY

Table $3-1$ shows that 129,700 persons live in 55,700 Jewish households in Miami. Jewish households include households in residence for three or more months of the year. Of the 129,700 persons in Jewish households, 122,200 persons (94\%) are Jewish. (See the "Persons in Jewish Households Who Are Jewish" section in Chapter 6 for a comparison of the percentage of persons who are Jewish with other Jewish communities.) Note that the $0.8 \%$ of persons who consider themselves "part Jewish" are included here as Jewish.

In addition to the 129,700 persons in Jewish households, it is estimated that 1,000 Jewish persons live in institutions without their own telephone numbers and 1,000 Jewish students (whose parents do not live in Miami) live in dormitories at area universities. Thus, in total, the Jewish community contains more than 130,000 persons.

Note that the number of Jews is shown in various sections of this report as 123,200 Jews (the resident Jewish population), which includes Jews in Jewish households and Jews in institutions, but excludes Jewish college students from outside Miami who live in dormitories in Miami.

## North Dade

Table 3-1 shows that in North Dade Core East, a total of 38,744 persons live in 18,158 Jewish households. 2\% of persons in Jewish households are not Jewish. Thus, 37,891 Jews live in North Dade Core East.

In North Dade Core West, a total of 19,119 persons live in 7,520 Jewish households. 2\% of persons in Jewish households are not Jewish. Thus, 18,717 Jews live in North Dade Core West.

In Other North Dade, a total of 10,728 persons live in 4,679 Jewish households. 13\% of persons in Jewish households are not Jewish. Thus, 9,387 Jews live in Other North Dade.

Thus, in North Dade, a total of 68,589 persons live in 30,357 Jewish households. 4\% of persons in Jewish households are not Jewish. Thus, 65,982 Jews live in North Dade.

## South Dade

In West Kendall, a total of 18,863 persons live in 8,330 Jewish households. 8\% of persons in Jewish households are not Jewish. Thus, 17,411 Jews live in West Kendall.

In East Kendall, a total of 7,687 persons live in 2,680 Jewish households. 11\% of persons in Jewish households are not Jewish. Thus, 6,833 Jews live in East Kendall.

In NE South Dade, a total of 13,679 persons live in 6,090 Jewish households. 10\% of persons in Jewish households are not Jewish. Thus, 12,284 Jews live in NE South Dade.

Thus, in South Dade, a total of 40,228 persons live in 17,100 Jewish households. 9\% of persons in Jewish households are not Jewish. Thus, 36,527 Jews live in South Dade.

## The Beaches

In North Beach, a total of 4,938 persons live in 1,894 Jewish households. 4\% of persons in Jewish households are not Jewish. Thus, 4,765 Jews live in North Beach.

In Middle Beach, a total of 10,859 persons live in 4,010 Jewish households. 7\% of persons in Jewish households are not Jewish. Thus, 10,142 Jews live in Middle Beach.

In South Beach, a total of 5,093 persons live in 2,339 Jewish households. 6\% of persons in Jewish households are not Jewish. Thus, 4,767 Jews live in South Beach.

Thus, in The Beaches, a total of 20,883 persons live in 8,243 Jewish households. $6 \%$ of persons in Jewish households are not Jewish. Thus, 19,672 Jews live in The Beaches.

| TABLE 3-1 <br> CURRENT SIZE OF THE JEWISH COMMUNITY |  |  |  |  |  |

| South Dade | 17,100 | 2.3525 | 40,228 | 90.8\% | 36,527 |
| West Kendall | 8,330 | 2.2645 | 18,863 | 92.3\% | 17,411 |
| East Kendall | 2,680 | 2.8681 | 7,687 | 88.9\% | 6,833 |
| NE South Dade | 6,090 | 2.2462 | 13,679 | 89.8\% | 12,284 |
| The Beaches | 8,243 | 2.5334 | 20,883 | 94.2\% | 19,672 |
| North Beach | 1,894 | 2.6070 | 4,938 | 96.5\% | 4,765 |
| Middle Beach | 4,010 | 2.7079 | 10,859 | 93.4\% | 10,142 |
| South Beach | 2,339 | 2.1774 | 5,093 | 93.6\% | 4,767 |
| All | 55,700 | 2.3286 | 129,700 | 94.2\% | 122,200 |
| Jewish Persons in Institutions Without Their Own Telephone Numbers |  |  |  |  | 1,000 |
| Total Resident Jewish Population |  |  |  |  | 123,200 |
| Jewish Students (Whose Parents Do Not Live in Miami) in Dormitories |  |  |  |  | 1,000 |
| Total Number of Persons in the Jewish Community (including non-Jews in Jewish households, Jewish persons in institutions, and Jewish students in dormitories):130,700 |  |  |  |  |  |

Table 3-2 shows the current size of the Jewish community based on months in residence. Only 4.3\% (2,395 households) of Jewish households are in residence for only 3-7 months of the year (part-year households). (See the "Months in Residence section in Chapter 4 for a comparison with other Jewish communities.) 125,485 persons live in 53,305 full-year Jewish households. Of the 125,485 persons in full-year Jewish households, 118,082 persons (94\%) are Jewish. An additional 1,000 Jewish persons in institutions (Table 3-1) brings the total number of full-year residents to 119,082 .

\left.| TABLE 3-2 |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| CURRENT SIZE OF THE JEWISH COMMUNITY BASED ON |  |  |  |  |  |  |
| MONTHS IN RESIDENCE |  |  |  |  |  |  |$\right]$

Table 3-3 shows that 55\% of Jewish households live in North Dade; 31\%, in South Dade; and $15 \%$, in The Beaches. By geographic subarea, 33\% of households live in North Dade Core East; $15 \%$, in West Kendall; $14 \%$, in North Dade Core West; $11 \%$, in NE South Dade; $8 \%$, in Other North Dade; 7\%, in Middle Beach; and $5 \%$ or less in each of East Kendall, South Beach, and North Beach.

Table 3-3 also shows that the distribution of persons in Jewish households and the distribution of Jews does not differ significantly from the distribution of Jewish households.

The geographic distribution of persons in Jewish households and the geographic distribution of Jews are different from the distribution of Jewish households due to variations among the geographic areas in household size and in the percentage of persons in Jewish households who are Jewish. Thus, for example, while 55\% of Jewish households live in North Dade, 54\% of Jews do so.

## Percentage Jewish

Table 3-4 shows three measures of the percentage of the Jewish population that have been calculated with respect to the Miami Jewish community.
(1) Percentage of Jewish Households. The number of Jewish households divided by the total number of households (both Jewish and non-Jewish) in the local community in the year of the study.
(2) Percentage of the Population in Jewish Households. The number of persons in Jewish households divided by the total number of persons (both Jewish and non-Jewish) in the local community in the year of the study.

3 Percentage of Jews. The number of Jews (both in households and institutions) divided by the total number of persons (both Jewish and non-Jewish) in the local community in the year of the study. (Note that the number of Jews in institutions is added to the number of Jews in households in communities for which this information is available.)

The 55,700 Jewish households constitute $6.0 \%$ of the estimated 931,678 households in Miami. The 129,700 persons in Jewish households constitute $5.0 \%$ of the estimated 2,617,176 persons in Miami. The resident Jewish population of 123,200 Jews constitute $4.7 \%$ of the estimated $2,617,176$ persons in Miami.
$\boldsymbol{\checkmark} 11 \%$ of persons age 65 and over in Miami are Jewish.
Community Comparisons. Table 3-3 shows that the 6.0\% of Jewish households is above average among about 55 comparison Jewish communities and compares to $48.6 \%$ in South Palm Beach, 21.2\% in Broward, 16.7\% in West Palm Beach, 16.0\% in New York, $6.8 \%$ in Washington, $5.1 \%$ in Cleveland, and $4.3 \%$ in Atlanta. The 6.0\% compares to 6.5\% in 2004 and $9.5 \%$ in 1994. The $6.0 \%$ compares to $2.7 \%$ nationally.
$\checkmark$ According to the 2013 American Community Survey, 66\% of persons in Miami-Dade County are Hispanic, 19\% are Black, and 2\% are Asian.
$\checkmark 15 \%$ (397,811 persons) of persons in Miami-Dade County are white, non-Hispanic. The 123,200 persons in Jewish households constitute $31 \%$ of the white, non-Hispanic population.

## CHANGES IN THE SIZE OF THE JEWISH COMMUNITY 1926-2014

Table 3-5 shows the changes in the size of the Jewish community of Miami since 1926. The estimates prior to 1994 are based upon counts of households with Distinctive Jewish Names (DJNs) in old telephone directories, calculating a ratio between the RDD estimate of Jews from 1994 and the number of households with a DJN in the 1994 telephone directory and applying this ratio to DJN counts from old telephone directories. ${ }^{7}$

[^2]Caution should be exercised in interpreting the older data, particularly the data from before 1970. Measures of Jewish household size are available at only three points in time: 1971, 1982, 1994, 2004, and 2014. Certain assumptions were made in deriving data before 1970 that become more problematic as one moves further back in time. Such assumptions include that over the time period covered: © the percentage of unlisted telephone numbers remained constant; (2) the percentage of Jewish households with telephones remained constant; © the percentage of households with a DJN remained constant; and © the relationship between the average household size of Jewish households and all Miami households (both Jewish and non-Jewish) remained constant.

Despite these methodological problems, it is clear that the Jewish population of Miami increased significantly from 1926 to 1975. After decreases that continued for almost onequarter of a century ( 1980 to 2004), the number of Jewish households remained fairly constant from 2004 to 2014. As a result of the small increase in the number of Jewish households from 2004-2014 (1,700 households), combined with an increase in average household size from 2.25 persons per household in 2004 to 2.33 in 2014, the number of persons in Jewish households increased from 121,300 to 129,700 (7\%). The number of Jews in Jewish households also increased from 112,300 to 122,200 (8\%), reflecting a small increase as well in the percentage of persons in Jewish households who are Jewish (from 92.6\% in 2004 to $94.2 \%$ in 2014).

The table below summarizes some of the most important changes over the past decade.

| AN InCREASING Jewish Population, 2004-20 14 |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Number of: | 2004 | 2014 | Increase | $\%$ Increase |
| Jewish households | 54,000 | 55,700 | 1,700 | $3 \%$ |
| Persons living in Jewish <br> households | 121,300 | 129,700 | 8,400 | $7 \%$ |
| Jewish Persons | 113,300 | 123,200 | 9,900 | $9 \%$ |

TABLE 3-5
Jewish Households and Persons in Jewish Households, 1926-20 14

| 1970 | 63,500 | 177,800 | 42.2\% |  |
| 1975 | 87,400 | 218,500 | 22.9\% |  |
| 1980 | 90,000 | 207,000 | (5.3)\% |  |
| 1985 | 85,700 | 188,500 | (8.9)\% |  |
| 1990 | 69,500 | 152,200 | (19.3)\% |  |
| 1994 | 67,000 | 146,600 | (3.7)\% | 136,300 * |
| 2004 | 54,000 | 121,300 | (17.3)\% | 112,300 |
| 2014 | 55,700 | 129,700 | 6.9\% | 122,200 |

* The 2004 report revised the data reported in the 1994 report.

Note: This table excludes Jews in institutions to make the data from 1994-2014 comparable to the data from 1926-1990 for which years data on Jews in institutions are not available.

# Changes in the Geographic DISTRIBUTION OF THE JEWISH COMMUNITY 1926-1994 

0n the late 1920's, about 1,000 persons in Jewish households lived in Miami, mostly in Shenandoah (in South Dade), which became the first Core Area of Jewish settlement.

By 1940, the Jewish population increased to about 6,400 persons in Jewish households, with a second Core Area established in South Beach (in The Beaches).

By 1945, both Core Areas showed significant growth, and the number of persons in Jewish households almost doubled, to about 12,000 persons. $60 \%$ of the Jewish population now lived in South Beach, and Jews began to spread westward out of Shenandoah into Westchester (in South Dade).

By 1950, the Jewish population increased to about 42,000 persons. The two Core Areas remained strong, with Shenandoah spreading westward and South Beach spreading northward. By 1955, about 72,000 persons in Jewish households lived in Miami. Jews began to settle in the City of North Miami (in North Dade). While the two Core Areas still contained $75 \%$ of the Jewish population, significant numbers were seen for the first time in East Kendall (in South Dade).

From 1955-1960, three significant changes occurred as the number of persons in Jewish households increased to about 107,500 persons. First, the Jewish population in Shenandoah and Westchester decreased, although these areas were still home to over 18,000 persons in Jewish households. Second, North Miami Beach (in North Dade) saw explosive growth, with the Jewish population increasing by over 13,400 persons. Third, East Kendall saw significant growth.

By 1965, the number of persons in Jewish households increased to about 125,000 persons, more than half of whom lived in The Beaches. Growth continued in North Miami Beach, while the Jewish population in Shenandoah and Westchester continued to decrease.

By 1970, about 177,800 persons in Jewish households lived in Miami. Shenandoah and Westchester contained only $10 \%$ of the Jewish population. The two Core Areas were now The Beaches (with $54 \%$ of persons in Jewish households) and North Miami Beach (with $20 \%$ of persons in Jewish households).

By 1975, the Jewish population increased to about 218,500 persons, only 4\% of whom lived in Shenandoah and Westchester. The percentage of the Jewish population in The Beaches began to decrease. The Jewish population in East Kendall, on the other hand, continued to increase and to spread westward of Florida's Turnpike into West Kendall. Almost $30 \%$ of the Jewish population now lived in North Miami Beach.

From 1975-1994, Miami's Jewish population decreased from about 218,500 persons in 1975 to about 207,000 persons in 1980, about 188,500 persons in 1985, about 152,200 persons in 1990, and finally, to about 146,600 persons in 1994. Much of this decrease was attributable to mortality among the elderly population in North Dade and The Beaches. In addition, migration occurred from Miami to Broward and Palm Beach Counties, particularly after Hurricane Andrew in 1992. More importantly, much of the Jewish migration from the northeastern United States began to head to Broward and Palm Beach Counties, where large adult retirement communities, such as Century Village and King's Point, were built.

The next section examines the 1994-2014 period.

## CHANGES IN THE GEOGRAPHIC DISTRIBUTION OF THE JEWISH COMMUNITY, 1994-2014

Table 3-6 shows how the geographic distribution of Jewish households in Miami changed from 1994-2014. The percentage of households living in North Dade increased from $45 \%$ in 1994 to $51 \%$ in 2004 and $55 \%$ in 2014. The percentage in South Dade remained relatively stable during the period. The percentage in The Beaches decreased from 26\% in 1994 to $17 \%$ in 2004 and 15\% in 2014.

| West Kendall | 9,112 | 13.6 | 6,642 | 12.3 | 8,330 | 15.0 |
| East Kendall | 5,159 | 7.7 | 6,264 | 11.6 | 2,680 | 4.8 |
| NE South Dade | 5,092 | 7.6 | 4,428 | 8.2 | 6,090 | 10.9 |
| The Beaches | 17,219 | 25.7\% | 9,396 | 17.4\% | 8,243 | 14.8\% |
| North Beach | 3,484 | 5.2 | 2,160 | 4.0 | 1,894 | 3.4 |
| Middle Beach | 8,978 | 13.4 | 4,806 | 8.9 | 4,010 | 7.2 |
| South Beach | 4,757 | 7.1 | 2,430 | 4.5 | 2,339 | 4.2 |
| All | 67,000 | 100.0\% | 54,000 | 100.0\% | 55,700 | 100.0\% |

Table 3-7 shows the changes in the geographic distribution of Jewish households from 1994-2004. Table 3-8 shows the changes from 2004-2014. Table 3-9 shows the changes in the geographic distribution of persons in Jewish households from 1994-2004 and 20042014.

From 2004-2014, the increase in the number of Jewish households in North Dade offset the decline that occurred from 1994-2004. The number of households in North Dade Core East declined by 6\% from 2004-2014, while the number of households in North Dade Core West increased by $35 \%$ and the number of households in Other North Dade increased by $88 \%$. In 2014, as in 2004, North Dade Core East accounts for one-third of the households in Miami.

The number of households in South Dade remained about the same from 2004-2014, following a decline of about 2,000 households from 1994-2004. The increase in the number of households in West Kendall from 2004-2014 offset much of the decline that occurred from 1994-2004. East Kendall shows a $57 \%$ decrease in the number of households from 2004-2014, following a $21 \%$ increase from 1994-2004. The number of households in NE South Dade in 2014 exceeds the number it had in 1994 and 2004.

Finally, the number of households in The Beaches, which decreased by almost 8,000 from 1994-2004, continued to decrease from 2004-2014, but only by about 1,150 households, mainly in North Beach and Middle Beach.

Despite changes in some of the geographic areas, overall, the number of Jewish households in Miami remained relatively stable in the past decade.

## COMMUNITY COMPARISONS

Table 3-10 compares the number of Jews in Miami with that of other Jewish communities with at least 20,000 Jews. Each community is defined by its Jewish Federation service area. Miami is the eleventh largest American Jewish community and the 123,200 Jews in Miami compares to 1,538,000 in New York, 215,600 in Washington, 186,300 in Broward County, 131,200 in South Palm Beach, 124,300 in West Palm Beach, 119,800 in Atlanta, and 80,800 in Cleveland.

ACS refers to the American Community Survey conducted by the US Census Bureau annually. ACS replaced the "long form" of the decennial census.

> All the nations of the earth shall 6less themselves by your descendants, because you have obeyed my commandments.

(Genesis 22:18)

## LOCATION OF THE JEWISH POPULATION

Table 4-1 shows that $25 \%$ of Jewish households in Miami live in zip code 33180 (14,148 households); 10\%, in 33179 (5,459 households); 7\% in 33160 (4,010 households); 6\%, in 33176 (3,231 households); and 5\% in 33140 (2,507 households).
$25 \%$ of households live in the top zip code area; $42 \%$, in the top three zip code areas; and $53 \%$, in the top five zip code areas.

Community Comparisons. Table 4-2 shows that the $25 \%$ who live in the top zip code area is above average among about 55 comparison Jewish communities and compares to $35 \%$ in West Palm Beach, 22\% in South Palm Beach, 19\% in Cleveland, 7\% in both Atlanta and Broward, 5\% in Washington, and 3\% in New York. The 25\% compares to 19\% in 2004 and $14 \%$ in 1994.

The $42 \%$ who live in the top three zip code areas is above average among about 50 comparison Jewish communities and compares to 57\% in West Palm Beach, 54\% in South Palm Beach, $41 \%$ in Cleveland, 20\% in Broward, 17\% in Atlanta, 13\% in Washington, and 9\% in New York. The 42\% compares to 43\% in 2004 and 35\% in 1994.

The $53 \%$ who live in the top five zip code areas is above average among about 50 comparison Jewish communities and compares to 74\% in South Palm Beach, 66\% in West Palm Beach, 53\% in Cleveland, 32\% in Broward, 25\% in Atlanta, 20\% in Washington, and $14 \%$ in New York. The 53\% compares to 54\% in 2004 and 50\% in 1994.

Sample Size Caution: The sample sizes for all zip code areas below the first thick line in Table 4-1 are generally about $\mathbf{2 5}$ or less. While this does not affect the accuracy of the number and percentage of Jewish households in each zip code area, little accuracy should be ascribed to the average household size and the persons in Jewish households data in each zip code area below this line. The sample sizes below the second very thick line are generally about 10 or less, and even less accuracy should be ascribed to the average household size and the persons in Jewish households data in each zip code area below this line.

* Shows the percentage of all Jewish households who live in the zip code area containing the largest number of Jewish households.

## PLACE OF BIRTH

Table 4-3 shows that 67\% of adults in Jewish households in Miami were born in the United States. 36\% of adults were born in the Northeast (including 26\% in New York, 4\% in Pennsylvania, and 4\% in New Jersey); 24\%, in the South; 5\%, in the Midwest; and 2\%, in the West. 18\% (18,815 adults) of adults were locally born (born in Miami). 33\% (35,094 adults) of adults were foreign born. 10\% (10,571 adults) of adults were born in South America; 5\% (5,497 adults), in Middle America; and 5\% (5,180 adults), in Israel.

The percentage of locally-born adults is important in understanding levels of attachment to the local community and local institutions. Most observers agree that Jewish adults living in the area in which they were born are more likely to maintain formal contacts with the Jewish community. They are more likely to continue to belong to the synagogue in which they were raised and to participate in the local organized Jewish community.

Table 4-5 shows that the percentage of adults who were locally born is $26 \%$ in South Dade, $21 \%$ in The Beaches, and $11 \%$ in North Dade. The percentage of adults who were born in the US is higher in South Dade (78\%) than in The Beaches (69\%) and North Dade (59\%). The percentage of adults born in South America is higher in North Dade (13\%) than in The Beaches (9\%) and South Dade (6\%). The percentage of adults born in Israel is higher in North Dade (7\%) than in The Beaches (4\%) and South Dade (2\%).

Table 4-6 shows that the percentage of adults who were locally born decreases from 44\% of adults under age 35 to $16 \%$ of adults age $35-64,8 \%$ of adults age $65-74$, and $1 \%$ of adults age 75 and over. The percentage of adults who were born in the Northeast increases from $14 \%$ of adults under age 35 to $24 \%$ of adults age $35-49,36 \%$ of adults age $50-64$, and $55 \%$ of adults age 65 and over.

The percentage of adults who were born in South America or Middle America is $15 \%$ of adults under age $35,23 \%$ of adults age $35-49,18 \%$ of adults age $50-64$, and $10 \%$ of adults age 65 and over.

Community Comparisons. Table 4-4 shows that the $18 \%$ locally born is about average among about 45 comparison Jewish communities and compares to 57\% in Cleveland, 54\% in New York, $16 \%$ in Atlanta, $15 \%$ in Washington, 2\% in both West Palm Beach and Broward, and 0\% in South Palm Beach. The 18\% compares to 13\% in 2004 and 11\% in 1994.
$\boldsymbol{\checkmark} 33 \%$ of all persons (both Jewish and non-Jewish adults and children) in Miami-Dade County as of 2012 were born in Florida.

The $33 \%$ foreign born is the highest of about 50 comparison Jewish communities and compares to 29\% in New York, 15\% in Broward, 12\% in South Palm Beach, 11\% in Atlanta, 8\% in both Cleveland and Washington, and 7\% in West Palm Beach. The 33\% compares to $31 \%$ in 2004 and 23\% in 1994.
$\boldsymbol{\checkmark} 51 \%$ of all persons (both Jewish and non-Jewish adults and children) in Miami-Dade County as of 2012 and $13 \%$ of all Americans (both Jewish and non-Jewish adults and children) as of 2012 were foreign born.
$31 \%$ of Jewish adults in Miami were foreign born, compared to $14 \%$ nationally.

## HoUsEHOLDS FROM THE FORMER SOVIET UNION

〕ewish households in Miami are defined as Former Soviet Union (FSU) households if any Jewish adult in the household was born in one of the republics of the FSU or the respondent's location of residence prior to Miami was in the FSU. Table 4-7 shows that $3.1 \%$ (1,727 households) of households are FSU households . 4.0\% of households in North Dade and 3.7\% of households in the Beaches are FSU households, compared to 1.4\% of households in South Dade.

Community Comparisons. Table 4-8 shows that the $3.1 \%$ of FSU households is about average among about 40 comparison Jewish communities and compares to $15.0 \%$ in New York, $4.4 \%$ in Cleveland, 3.2\% in Washington, $1.1 \%$ in South Palm Beach, 0.5\% in West Palm Beach, and 0.2\% in Broward. The 3.1\% compares to 4.9\% in 2004 and 2.4\% in 1994.

The 1,727 households is the seventh highest of about 40 comparison Jewish communities and compares to 104,000 households in New York, 3,520 households in Washington, 1,700 households in Cleveland, 803 households in South Palm Beach, 345 households in West Palm Beach, and 266 households in Broward. The 1,727 households compares to 2,646 households in 2004 and 1,608 households in 1994.
$\boldsymbol{\checkmark}$ The average household size for FSU households is 2.6037 persons per household, suggesting that about $3.5 \%$ ( 4,497 persons) of persons in Jewish households live in FSU households (sample size $=4,968$ ).

NJPS 2000 reports that 227,000 Jewish adults currently living in the United States had moved from the FSU since 1980. An additional 22,000 adults and 40,000 children live in households with Jewish adult immigrants from the FSU, bringing the population in Jewish households from the FSU to 289,000 persons.

Notes: 1) An FSU household is a household in which an adult was born in one of the 15 republics of the FSU or the respondent's location of residence prior to the local community was in the FSU.
2) Only the random digit dialing (RDD) sample was used to calculate the percentage of FSU households in communities in which RDD and Distinctive Jewish Name (DJN) sampling were used because a disproportionately low percentage of FSU households have a DJN. (See Chapter 2 for an explanation of sampling methods.)

## Hispanic Jews, Sephardic Jews, and Israelis

Respondents in Jewish households in Miami were asked whether each Jewish adult in their household considered himself/herself to be a Hispanic Jew, a Sephardic Jew, or an Israeli.

Note that for simplicity, households in which a Jewish adult considers himself/herself to be a Hispanic Jew, a Sephardic Jew, or an Israeli are referred to in this report as Hispanic, Sephardic, and Israeli households, respectively.

## Hispanic Jews

Table 4-9 shows that $14.9 \%$ ( 14,730 adults) of Jewish adults consider themselves to be Hispanic Jews (Hispanic Jewish adults).
$\checkmark$ According to the 2010 US Census, 1,336,060 Hispanic adults live in Miami. Thus, in 2014, about 1.1\% of Hispanic adults in Miami are Jewish, compared to $0.9 \%$ in 2004.

Table 4-9 shows that the percentage of Hispanic Jewish adults is $17 \%$ in The Beaches, $16 \%$ in North Dade, and 12\% in South Dade. The 17\% in The Beaches compares to 12\% in 2004 and $4 \%$ in 1994. The $16 \%$ in North Dade compares to $12 \%$ in 2004 and 6\% in 1994. The 12\% in South Dade compares to 8\% in 2004 and 4\% in 1994.

Table 4-10 shows that from 2004-2014 the number of Hispanic Jewish adults increased in each of the geographic areas, most significantly in North Dade and South Dade, and in each of the geographic subareas, except for East Kendall and Middle Beach.

Community Comparisons. Table 4-11 shows that the $15 \%$ ( 14,730 adults) of Hispanic Jewish adults is the highest (measured in percent) of seven comparison Jewish communities and compares to 4\% (51,600 adults) in New York, 2\% (3,574 adults) in Broward, 1\% ( 1,559 adults) in South Palm Beach, and less than 1\% in both Cleveland (186 adults) and West Palm Beach (347 adults). The 15\% (14,730 adults) compares to $10 \%$ ( 9,531 adults) in 2004 and 5\% (5,297 adults) in 1994. The $15 \%$ compares to $2 \%$ nationally (49,500 adults).

Table 4-12 shows that 59\% of Hispanic Jewish adults live in North Dade; 25\%, in South Dade; and 16\%, in The Beaches. 36\% of Hispanic Jewish adults live in North Dade Core East.
$\boldsymbol{\checkmark}$ 15\% ( 8,355 households) of Jewish households contain a Hispanic Jewish adult (sample size $=2,020$ ). The $15 \%$ compares to $11 \%$ in 2004. The average household size of these households is 2.9262 persons.
$\checkmark 19 \%$ (24,448 persons) of persons in Jewish households live in households containing a Hispanic Jewish adult (sample size $=4,968$ ). The $19 \%$ compares to $15 \%$ in 2004.
$\checkmark$ In $64 \%$ of married households containing Hispanic Jewish adults, both spouses consider themselves to be Hispanic Jews (sample size = 238). The 64\% compares to 63\% in 2004.
$\checkmark 38 \%$ of Hispanic Jewish adults also consider themselves to be Sephardic Jews (sample size $=582$ ). The $38 \%$ compares to $38 \%$ in 2004.
$\checkmark$ 9\% of Hispanic Jewish adults also consider themselves to be Israelis (sample size = 582). The $9 \%$ compares to $8 \%$ in 2004.

Country from Which Hispanic Jews Come. Table 4-13 shows that 24\% of Hispanic Jewish adults come from Cuba; 18\%, from Argentina; 16\%, from Venezuela; 14\%, from Colombia; and 6\%, from Peru. In total, 57\% of Hispanic Jewish adults come from South America and 37\%, from Middle America.

Table 4-14 shows that the number of persons in households containing at least one Jewish Hispanic adult from Cuba remained about the same from 2004 to 2014, while the number of persons in Argentinian Jewish households increased by 44\%; Venezuelan Jewish households by 59\%, and Colombian Jewish households, by $24 \%$. The number of persons in Peruvian Jewish households increased from about 300 to about 1,950.

The preceding discussion of Hispanic Jews is based upon Jewish adults who were identified by the respondent as considering themselves to be Hispanic Jews. Another $1.4 \%$ ( 1,384 adults) of Jewish adults who do not consider themselves to be Hispanic Jews "come from" Spanish-speaking countries. Thus, the number of Hispanic Jewish adults and other Jewish adults who come from Hispanic countries is 16,114 . The 1.4\% compares to $0.9 \%$ in 2004, and the 16,114 Jewish adults compares to 10,398 Jewish adults in 2004.

## Sephardic Jews

Table 4-9 shows that $17.4 \%$ (17,202 adults) of Jewish adults consider themselves to be Sephardic Jews (Sephardic Jewish adults).

Table 4-9 shows that the percentage of Sephardic Jewish adults is $20 \%$ in North Dade, $16 \%$ in The Beaches, and 13\% in South Dade. The 20\% in North Dade compares to 16\% in 2004 and $8 \%$ in 1994. The $16 \%$ in The Beaches compares to $12 \%$ in 2004 and $5 \%$ in 1994. The 13\% in South Dade compares to 10\% in 2004 and 4\% in 1994.

Table 4-10 shows that from 2004-2014 the number of Sephardic Jewish adults increased in each of the geographic areas, most significantly in North Dade, and in each of the geographic subareas, except for East Kendall and Middle Beach.

Community Comparisons. Table 4-11 shows that the 17\% (17,202 adults) of Sephardic Jewish adults is the highest of nine comparison Jewish communities and compares to $7 \%$ ( 12,121 adults) in Washington and $4 \%$ in each of Broward ( 7,569 adults), South Palm Beach ( 5,155 adults), and West Palm Beach ( 4,048 adults). The 17\% (17,202 adults) compares to $13 \%$ (12,030 adults) in 2004 and $6 \% ~(7,370$ adults) in 1994. The 17\% compares to $7 \%$ (237,600 adults) nationally.

Table 4-12 shows that $63 \%$ of Sephardic Jewish adults live in North Dade; $23 \%$, in South Dade; and 14\%, in The Beaches. $41 \%$ of Sephardic Jewish adults live in North Dade Core East.
$\checkmark 19 \%$ of Jewish households (10,639 households) contain a Jewish adult who is a Sephardic Jew (sample size $=2,020$ ). The $19 \%$ compares to $15 \%$ in 2004. The average household size of these households is 2.9281 persons.
$\checkmark$ 24\% (31,152 persons) of persons in Jewish households live in households containing a Sephardic Jewish adult (sample size $=4,968$ ). The $24 \%$ compares to $18 \%$ in 2004.
$\checkmark$ In $50 \%$ of married households containing a Sephardic Jewish adult, both spouses consider themselves to be Sephardic Jews (sample size = 265). The $50 \%$ compares to $50 \%$ in 2004.
$\boldsymbol{\checkmark} 33 \%$ of Sephardic Jewish adults also consider themselves to be Hispanic Jews (sample size $=600$ ). The $33 \%$ compares to $30 \%$ in 2004.
$\boldsymbol{\checkmark} 26 \%$ of Sephardic Jewish adults also consider themselves to be Israelis (sample size $=600)$. The $26 \%$ compares to $24 \%$ in 2004.

## Israelis

Table 4-9 shows that $9.1 \%$ (8,996 adults) of Jewish adults consider themselves to be Israelis (Israeli Jewish adults).

Table 4-9 shows that the percentage of Israeli Jewish adults is $12 \%$ in North Dade, $9 \%$ in The Beaches, and 4\% in South Dade. The 12\% in North Dade compares to 10\% in 2004 and $8 \%$ in 1994. The $9 \%$ in The Beaches compares to $7 \%$ in 2004 and $3 \%$ in 1994. The 4\% in South Dade compares to 3\% in 2004 and 2\% in 1994.

Table 4-10 shows that from 2004-2014 the number of Israeli Jewish adults increased in each of the geographic areas, most significantly in North Dade, and in each of the geographic subareas, except West Kendall, North Beach, and Middle Beach.

Community Comparisons. Table 4-11 shows that the 9\% (8,996 adults) of Israeli Jewish adults is the highest of eight comparison Jewish communities and compares to $5 \%$ ( 7,744 adults) in Washington and $2 \%$ in each of Broward ( 4,415 adults), South Palm Beach ( 2,518 adults), and West Palm Beach (2,313 adults). The 9\% (8,996 adults) compares to 7\% (6,663 adults) in 2004 and $5 \%$ (5,758 adults) in 1994. The $9 \%$ compares to $2 \%(79,200$ adults) nationally.

Table 4-12 shows that 74\% of Israeli Jewish adults live in North Dade; 14\%, in The Beaches; and $12 \%$, in South Dade. $57 \%$ of Israeli Jewish adults live in North Dade Core East.
$11 \%(6,127$ households) of Jewish households contain an Israeli Jewish adult (sample size $=2,020$ ). The $11 \%$ compares to $8 \%$ in 2004. The average household size of these households is 2.9560 persons.
$\checkmark 14 \%$ (18,111 persons) of persons in Jewish households live in households containing an Israeli Jewish adult (sample size $=4,968$ ). The $14 \%$ compares to $10 \%$ in 2004.
$\checkmark$ In 54\% of married households containing Israeli Jewish adults, both spouses consider themselves to be Israelis (sample size = 155). The 54\% compares to 56\% in 2004.
$\checkmark 14 \%$ of Israeli Jewish adults also consider themselves to be Hispanic Jews (sample size $=311$ ). The $14 \%$ compares to $11 \%$ in 2004.
$\boldsymbol{\checkmark} 49 \%$ of Israeli Jewish adults also consider themselves to be Sephardic Jews (sample size $=311$ ). The $49 \%$ compares to $43 \%$ in 2004.

* Includes all persons who live in households containing a Hispanic Jewish adult.

## United States Citizenship

Tables 4-15 and 4-16 show the US citizenship status of all respondents and foreignborn respondents in Miami, respectively. Overall, $94 \%$ of respondents are US citizens, including $81 \%$ of foreign-born respondents. The $81 \%$ compares to $51 \%$ of all foreign born in Miami-Dade County as of 2012.

## Comparisons Among Population Subgroups.

## All Respondents

Table 4-15 shows that, overall, $94 \%$ of all respondents are US citizens. The percentage is much lower for respondents (in):

- who are Hispanic Jews (78\%) and Israelis (85\%)
- households in residence in Miami for 0-4 years (80\%) and 5-9 years (77\%)

## Foreign-Born Respondents

Table 4-16 shows that, overall, $81 \%$ of foreign-born respondents are US citizens. The percentage is much higher for respondents (in):

- from the FSU (100\%)
- households in residence in Miami for 20 or more years (95\%)
- age 75 and over (93\%)
- elderly single households (92\%)

The percentage is much lower for respondents (in):

- households in residence in Miami for 0-4 years (50\%) and 5-9 years (49\%)
- under age 35 (68\%)

## LGBT POPULATION

Respondents in Jewish households in Miami were asked if any adult in their household considered themselves to be gay, lesbian, bisexual, or transgender. 2.0\% of respondents answered affirmatively, suggesting that 1,114 Jewish households contain an adult who is LGBT.

It is likely that this is an underestimate of the LGBT population in Jewish households since some respondents may have been reluctant to disclose this information or may be unaware of the sexual orientation of a family member. $1.0 \%$ of respondents refused to answer this question.

## MONTHS IN RESIDENCE

T
able 4-17 shows that 4\% (2,395 households) of Jewish households in Miami live in Miami for 3-7 months of the year; $1.3 \%$, for $8-9$ months; $2.1 \%$, for $10-11$ months; and $92 \%$ ( 51,411 households), for 12 months. $96 \%$ ( 53,305 households) of households live in Miami for 8-12 months of the year.

Part-year households are households who live in Miami for 3-7 months of the year. Fullyear households live in Miami for 8-12 months of the year.

Community Comparisons. Table 4-19 shows that the 4\% of part-year households is the lowest of eight comparison Jewish communities and compares to $19 \%$ in both South Palm Beach and West Palm Beach and 9\% in Broward. The 4\% compares to 7\% in 2004 and 6\% in 1994.

Comparisons Among Population Subgroups. Table 4-18 shows that, overall, 4\% of households are part-year households. The percentage is much higher in:

- households in North Beach (13\%)
- Holocaust survivor households (12\%)
- households age 75 and over (11\%)
- elderly couple households (12\%)

## Location Where Part-Year Households Spend THE REMAINDER OF THE YEAR

Table 4-20 shows that 24\% (565 households) of Jewish part-year households in Miami spend the remainder of the year in New York; 14\%, in Massachusetts; and 11\%, in New Jersey. 12\% (283 households) of part-year households spend the remainder of the year in Canada.

The percentage of part-year households who spend the remainder of the year in Massachusetts increased from 5\% in 2004 to 14\% in 2014.

Table 4-21 shows that the $24 \%$ who spend the remainder of the year in New York is the lowest of six comparison Jewish communities and compares to $36 \%$ in South Palm Beach, $34 \%$ in Broward, and $33 \%$ in West Palm Beach. The $24 \%$ compares to $30 \%$ in 2004.

## Probability of Part-Year Households Becoming Full-Year Households

In a question asked in the 2004 study, but not repeated in this study, 8\% of part-year households said that they will definitely become full-year households; 17\%, probably; $28 \%$, probably not; $41 \%$, definitely not; and $7 \%$, don't know.

For comparisons of these results with other Jewish communities, see Section 4 of Ira M. Sheskin, Comparison s of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish DataBank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org.

## Location of Residence Prior to Miami

Table 4-22 shows that $10 \%$ ( 5,490 households) of respondents in Jewish full-year households in Miami have always lived in Miami and 7\% moved to Miami from elsewhere in Florida, including 4\% from Broward County or Palm Beach County and 3\% from other areas in Florida. 41\% of respondents in full-year households moved to Miami from the Northeast (including 28\% from New York); 9\%, from the Midwest; 7\%, from elsewhere in the South; and 3\%, from the West. 23\% of respondents in full-year households moved to Miami from foreign locations, including 3\% from Israel, 8\% from South America, and 4\% from Middle America.

Community Comparisons. Table 4-23 shows that the $28 \%$ who moved to Miami from New York is about average among nine comparison Jewish communities and compares to 46\% in Broward, 44\% in South Palm Beach, and 41\% in West Palm Beach. The 28\% compares to $35 \%$ in 2004 and $41 \%$ in 1994.

* Includes respondents who have always lived in the local community.

Note: Full-year households live in the Florida community for 8-12 months of the year.

## Length of Residence in Miami

■ength of residence, like place of birth, is an indicator of the levels of attachment of the local Jewish population to the local community and local institutions. Length of residence is also an important indicator of population change in that it indicates the number of Jewish households who have moved to the community in recent years.

Table 4-24 shows that 9\% (5,124 households) of Jewish households in Miami moved to Miami within the past five years (new households (1). Thus, an average of 1,025 households who currently live in Miami moved to Miami each year during the past five years (the in-migration rate), of whom 981 households are full-year households. $8 \%$ of households have lived in Miami for 5-9 years; 17\%, for 10-19 years; and 65\%, for 20 or more years (long-term households (2).

Community Comparisons. Table 4-25 shows that the 9\% of new households is about average among about 50 comparison Jewish communities and compares to 21\% in West Palm Beach, 19\% in South Palm Beach, 17\% in Washington, 16\% in Broward, 15\% in Atlanta, 4\% in Cleveland, and 3\% in New York. The 9\% compares to 12\% in both 2004 and 1994.

The 65\% of long-term households is well above average among about 50 comparison Jewish communities and compares to 85\% in Cleveland, 78\% in New York, 54\% in Washington, $45 \%$ in Atlanta, $31 \%$ in Broward, and $23 \%$ in both West Palm Beach and South Palm Beach. The 65\% compares to $62 \%$ in 2004 and $55 \%$ in 1994, implying an increasingly stable Jewish population.

Table 4-26 shows that the 1,025 households who currently live in Miami who, on average, moved to Miami each year during the past five years is above average among about 50 comparison Jewish communities and compares to 4,123 in Broward, 3,705 in New York, 3,630 in Washington, 2,953 in West Palm Beach, 2,716 in South Palm Beach, 1,839 in Atlanta, and 268 in Cleveland. The 1,025 households compares to 1,296 in 2004 and 1,541 in 1994.

## Comparisons Among Population Subgroups.

## New Households

Table 4-24 shows that, overall, $9 \%$ of households are new households. The percentage is much higher in:

- households in South Beach (26\%)
- households under age 35 (36\%)
- non-elderly single households (25\%)

The percentage is much lower in:

- households in North Dade Core West (2\%) and West Kendall (2\%)
- Holocaust survivor households (2\%)
- households age 75 and over (1\%)
- households with only adult children (2\%) and elderly single households (2\%)

## Long-Term Households

Overall, $65 \%$ of households are long-term households. The percentage is much higher in:

- households in West Kendall (91\%) and East Kendall (77\%)
- households in single family homes (75\%)
- households age 65-74 (79\%) and age 75 and over (81\%)
- households with only adult children (76\%), elderly couple households (79\%), and elderly single households (80\%)

The percentage is much lower in:

- part-year households (49\%)
- households in Middle Beach (55\%) and South Beach (38\%)
- FSU households (54\%), Hispanic households (46\%), Sephardic households (53\%), and Israeli households (45\%)
- households under age 35 (27\%) and age 35-49 (38\%)
- households with children (43\%) and non-elderly single households (48\%)
- Orthodox households (51\%)
- households who attended Chabad in the past year (50\%)

## Profiles of New and Longer-Term Households

Table 4-27 compares Jewish households in residence in Miami for 0-4 years (new households) with households in residence for five or more years (longer-term households). While Table 4-24 shows the percentage of households in each population subgroup in residence in Miami for various lengths of time (0-4 years, 5-9 years, etc.), Table 4-27 shows profiles of new households and longer-term households. As an interpretation of this table, note that while Table 4-24 shows that 8\% of households in North Dade are new households, Table 4-27 shows that 47\% of new households live in North Dade. Only important differences between new households and longer-term households are discussed below.

Compared to longer-term households, new households are (were) more likely to:

- live in Middle Beach, South Beach, and NE South Dade
- be Hispanic or Israeli households
- live in high rise buildings
- be under age 35 and age 35-49
- be households with children and non-elderly single households
- contain adults who are employed full time
- attend Chabad in the past year
- be Jewish organization members

Compared to longer-term households, new households are (were) less likely to:

- live in West Kendall and North Dade Core West
- live in single family homes
- be age 50-64, age 65-74, and 75 and over
- be households with only adult children, elderly couple households, and elderly single households
- contain retired adults
- be Reform
- be intermarried
- be synagogue members
- donate to the Jewish Federation in the past year

In addition, sample sizes are lower for Household Income and Donated to Jewish Federation in the Past Year due to missing responses. |  |  |

## Length of Residence at Current Address

Table 4-28 shows that 26\% of Jewish households in Miami have lived at their current address for 0-4 years; 12\%, for 5-9 years; 26\%, for 10-19 years; and 36\%, for 20 or more years.

The percentage of households who have lived at their current address for 0-4 years indicates the presence of households who probably have less discretionary income for charitable purposes because during this time the percentage of a household's income needed for mortgage payments and other home-related expenses (such as furniture) may be at its highest.

Community Comparisons. Table 4-29 shows that the 26\% at their current address for 0-4 years is the sixth lowest of about 45 comparison Jewish communities and compares to $45 \%$ in Atlanta, $40 \%$ in Washington, $39 \%$ in West Palm Beach, $31 \%$ in South Palm Beach, $30 \%$ in Broward, and $24 \%$ in Cleveland. The 26\% compares to $31 \%$ in 2004 and $33 \%$ in 1994.

The $36 \%$ at their current address for $\mathbf{2 0}$ or more years is the second highest of about 45 comparison Jewish communities and compares to 29\% in Cleveland, 19\% in Washington, $17 \%$ in Broward, 14\% in South Palm Beach, 12\% in Atlanta, and 10\% in West Palm Beach. The $36 \%$ compares to $26 \%$ in 2004 and $22 \%$ in 1994, indicating increasing neighborhood stability.

## Comparisons Among Population Subgroups.

## 0-4 Years in Residence

Table 4-28 shows that, overall, $26 \%$ of households have lived at their current address for $0-4$ years. The percentage is much higher in:

- households in NE South Dade (45\%), North Beach (43\%), Middle Beach (42\%), and South Beach (59\%)

The percentage is much lower in:

- households in North Dade Core West (12\%) and West Kendall (9\%)

## 20 or More Years in Residence

Overall, 36 \% of households have lived at their current address for $\mathbf{2 0}$ or more years. The percentage is much higher in:

- households in North Dade Core West (47\%) and West Kendall (64\%)

The percentage is much lower in:

- households in NE South Dade (20\%), North Beach (21\%), Middle Beach (25\%), and South Beach (13\%)

## Home Ownership

Table $4-30$ shows that $81 \%$ of Jewish households in Miami own their home. Home ownership indicates a higher level of attachment to the local community. Examining home ownership among elderly households also provides an indication of the percentage of elderly persons who, because they will have homes to sell, might be able to afford unsubsidized adult living facilities. (See the "Housing Value" section in Chapter 5.)

Community Comparisons. Table $4-31$ shows that the $81 \%$ home ownership is about average among about 45 comparison Jewish communities and compares to $92 \%$ in West Palm Beach, $91 \%$ in South Palm Beach, 85\% in Broward, 84\% in Atlanta, 79\% in both Cleveland and Washington, and 54\% in New York. The 81\% compares to 83\% in 2004 and $75 \%$ in 1994. The $81 \%$ compares to $66 \%$ nationally, $57 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 66\% of all American households (both Jewish and non-Jewish) as of 2012.

Comparisons Among Population Subgroups. Table 4-30 shows that, overall, 81\% of households own their home. The percentage is much higher in:

- part-year households (91\%)
- households in North Dade Core West (92\%) and West Kendall (92\%)
- households in single family homes (94\%)
- households age 65-74 (93\%)
- elderly couple households (96\%)
- households earning an annual income of \$200,000 and over (91\%)

The percentage is much lower in:

- households in NE South Dade (63\%), Middle Beach (65\%), and South Beach (51\%)
- households in residence in Miami for 0-4 years (48\%) and 5-9 years (59\%)
- households in high rise buildings (69\%)
- households under age 35 (36\%)
- non-elderly single households (54\%)
- households earning an annual income under \$25,000 (69\%) and \$25,000\$50,000 (70\%)

## Type of Housing

Table 4-32 shows that 42\% of Jewish households in Miami live in single family homes; $44 \%$, in high rise buildings of four or more stories; and 14\%, in townhouses, villas, non-high rise apartment complexes, and garden apartments (townhouses).

The $42 \%$ in single family homes compares to $40 \%$ in 2004 ; the $44 \%$ in high rise buildings compares to $48 \%$ in 2004. The $14 \%$ in townhouses compares to 12\% in 2004.

## Comparisons Among Population Subgroups.

## Single Family Homes

Table 4-32 shows that, overall, $42 \%$ of households live in single family homes. The percentage is much higher in:

- households in North Dade Core West (58\%), West Kendall (72\%), and East Kendall (89\%)
- households age 35-49 (56\%) and age 50-64 (58\%)
- households with children (63\%), households with only adult children (62\%), and non-elderly couple households (59\%)
- households earning an annual income of \$100,000-\$200,000 (53\%) and \$200,000 and over (61\%)
- JCC member households (58\%)

The percentage is much lower in:

- part-year households (10\%)
- households in North Dade Core East (17\%) and South Beach (15\%)
- Holocaust survivor households (17\%)
- households in residence in Miami for 0-4 years (21\%) and 5-9 years (29\%)
- households under age 35 (23\%) and age 75 and over (26\%)
- non-elderly single households (20\%) and elderly single households (18\%)
- households earning an annual income under \$25,000 (24\%) and \$25,000\$50,000 (25\%)

## High Rise Buildings

Overall, $44 \%$ of households live in high rise buildings. The percentage is much higher in:

- part-year households (85\%)
- households in North Dade Core East (71\%), North Beach (60\%), and South Beach (63\%)
- Holocaust survivor households (67\%)
- households in residence in Miami for 0-4 years (67\%) and 5-9 years (58\%)
- households under age 35 ( $63 \%$ ) and age 75 and over (62\%)
- non-elderly single households (62\%) and elderly single households (63\%)

The percentage is much lower in:

- households in North Dade Core West (28\%), West Kendall (6\%), and East Kendall (5\%),
- households age 35-49 (32\%) and age 50-64 (30\%)
- households with children (27\%), households with only adult children (21\%), and non-elderly couple households (33\%)
- households earning an annual income of $\$ 200,000$ and over (33\%)
- JCC member households (31\%)

## Townhouses

Overall, $14 \%$ of households live in townhouses. The percentage is much higher in:

- households in West Kendall (23\%) and South Beach (23\%)
- households earning an annual income under \$25,000 (22\%) and \$25,000\$50,000 (23\%)

The percentage is much lower in:

- part-year households (5\%)
- households in North Beach (2\%)

## Moving Plans

Respondents in full-year Jewish households in Miami were asked the probability that they will move within the next three years. In this question respondents are asked about prospective behavior. In examining these results it should be noted that some respondents have difficulty projecting their behavior and that unforeseen events may alter projected behavior. However, in the aggregate, the results are indicative of the community's propensity toward mobility.

Table 4-33 shows that $5 \%$ (2,665 households) of full-year households will definitely move (either within Miami or out of Miami) within the next three years. 11\% (5,597 households) of full-year households will probably move; 29\%, probably not; 51\%, definitely not; and 5\% don't know. In total, 16\% of full-year households will definitely/probably move within the next three years.

Community Comparisons. Table 4-34 shows that the 16\% definitely/probably moving is about average among about 45 comparison Jewish communities and compares to $24 \%$ in Cleveland, $21 \%$ in both Washington and Atlanta, 18\% in Broward, and 8\% in both West Palm Beach and South Palm Beach. The 16\% compares to 13\% in 2004 and 23\% in 1994. The $16 \%$ compares to $32 \%$ nationally.

The $51 \%$ definitely not moving is the sixth highest of about 45 comparison Jewish communities and compares to 58\% in South Palm Beach, 54\% in West Palm Beach, 50\% in Broward, 49\% in Atlanta, 32\% in Washington, and 27\% in Cleveland. The 51\% compares to $51 \%$ in 2004 and $42 \%$ in 1994. The $51 \%$ compares to $35 \%$ nationally.

## Comparisons Among Population Subgroups.

## Definitely/Probably Moving

Table 4-33 shows that, overall, 16\% of households are definitely/probably moving. The percentage is much higher in:

- households in residence in Miami for 0-4 years (32\%)
- households under age 35 (37\%)
- non-elderly single households (26\%)

The percentage is much lower in:

- households age 75 and over (4\%)

## Definitely Not Moving

Overall, $51 \%$ of households are definitely not moving. The percentage is much higher in:

- households in North Beach (66\%)
- households age 75 and over (64\%)

The percentage is much lower in:

- households in NE South Dade (41\%) and South Beach (32\%)
- households in residence in Miami for 0-4 years (33\%) and 5-9 years (40\%)
- households under age 35 (21\%)
- non-elderly single households (36\%)

## Expected Destination for Households Who Are Moving

Respondents in full-year Jewish households in Miami who will definitely or probably move within the next three years were asked where they expect to move. In this question respondents are asked about prospective behavior. In examining these results it should be noted that some respondents have difficulty projecting their behavior and that unforeseen events may alter projected behavior. However, in the aggregate, the results are indicative of the community's propensity to remain in the local community or move elsewhere.

Table 4-35 shows that 7\% (3,785 households) of households will definitely/probably move out of Miami within the next three years; $6 \%$ will definitely/probably move within Miami; 2\% don't know where they will definitely/probably move; and $85 \%$ will probably not/definitely not move or don't know whether they will move. Included in the 7\% of households who will definitely/probably move out of Miami are $2 \%$ ( 853 households) who will definitely/probably move to Broward County and 1\% (480 households) who will definitely/probably move to Palm Beach County. Households who expect to move out of the local community are less likely to join local institutions and are not likely to be supporters of capital campaigns.

The 6\% of households in North Dade who will definitely/probably move out of Miami compares to $7 \%$ in 2004 and $16 \%$ in 1994. The 2\% of households in North Dade who will definitely/probably move to Broward County or Palm Beach County compares to 3\% in 2004 and $11 \%$ in 1994.

The $10 \%$ of households in South Dade who will definitely/probably move out of Miami compares $9 \%$ in 2004 and 14\% in 1994. The 3\% of households in South Dade who will definitely/probably move to Broward County or Palm Beach County compares to 4\% in 2004 and 7\% in 1994.

The 6\% of households in The Beaches who will definitely/probably move out of Miami compares to $6 \%$ in 2004 and $7 \%$ in 1994. The $2 \%$ of households in The Beaches who will definitely/probably move to Broward County or Palm Beach County compares to $1 \%$ in 2004 and 4\% in 1994.

Table 4-37 shows that $2.1 \%$ (1,119 households) of households will definitely move out of Miami within the next three years.
$\boldsymbol{\checkmark} .0 \%$ (2,665 households) of households will probably move out of Miami within the next three years.

The $2.1 \%$ definitely moving out of Miami within the next three years suggests a loss of an average of 373 households per year. Some portion of the $5.0 \%$ probably moving out of Miami (an average of 888 households per year) will actually move. In total, an average of between 373 and 1,261 households will move out of Miami each year within the next three years (the out-migration rate). An average of 1,025 households who currently live in Miami
moved to Miami each year during the past five years (the in-migration rate), of whom 981 households were full-year households. (See the "Length of Residence in Miami" section in this Chapter.) Assuming that the current rate of in-migration continues for the next few years, these data suggest that the number of Jewish households in Miami will probably remain about the same as a result of migration into and out of Miami.

Community Comparisons. Table 4-36 shows that the 7\% definitely/probably moving out of the local community is about average among about 40 comparison Jewish communities and compares to 9\% in both Cleveland and Washington, 8\% in Broward, 4\% in both South Palm Beach and West Palm Beach, and 3\% in Atlanta. The 7\% compares to $7 \%$ in 2004 and $13 \%$ in 1994.

The 6\% definitely/probably moving within the local community is about average among about 40 comparison Jewish communities and compares to 14\% in Cleveland, 11\% in Atlanta, 10\% in Washington, 9\% in Broward, and 3\% in both South Palm Beach and West Palm Beach. The 6\% compares to 4\% in 2004 and $7 \%$ in 1994.

Table 4-37 shows that the $2.1 \%$ definitely moving out of the local community is about average among about 40 comparison Jewish communities and compares to $3.3 \%$ in Cleveland, $2.9 \%$ in both Washington and Broward, $1.9 \%$ in West Palm Beach, $1.7 \%$ in South Palm Beach, and 1.2\% in Atlanta. The 2.1\% compares to 3.0\% in 2004 and 6.9\% in 1994.

## Location of Adult Children

Respondents age 40 and over in Jewish households in Miami were asked whether they have adult children who have established their own homes, and if so, whether these children live in Miami (households with local adult children). The interest in this information relates to the support system that adult children can provide for their parents, particularly in times of poor health or financial crisis. Adult children living in Miami presumably will provide such a support system. The presence of adult children living in Miami also indicates the existence of multi-generational families. Such families generally show a greater level of attachment to the local community and local institutions.

While the question was asked of respondents age 40 or over, the results are reported for respondents age 50 or over because $93 \%$ of respondents age 40-49 have no adult children who have established their own homes.

Table 4-38 shows that $22 \%$ of households in which the respondent is age 50 or over have no adult children who have established their own homes; $36 \%$ have at least one adult child who has established his/her own home in Miami; 8\% have no adult child in Miami, but have at least one adult child who has established his/her own home in Broward County; 2\% have at least one adult child in Palm Beach County, but no adult children in Miami or Broward County; and $32 \%$ have adult children who have established his/her own home elsewhere (outside South Florida), but not within South Florida. These data suggest that at least $36 \%$ of households in which the respondent is age 50 or over will have a local support system as they age, although many of the $8 \%$ with adult children in Broward County will also have that support system.

Community Comparisons. Table 4-39 shows that the $36 \%$ of households with local adult children from households in which the respondent is age 50 or over is about average among about 35 comparison Jewish communities and compares to $44 \%$ in Cleveland, $40 \%$ in Washington, $21 \%$ in Broward, 20\% in South Palm Beach, and 17\% in West Palm Beach. The 36\% does not include 8\% of households with adult children who have established their own homes in Broward County or 2\%, in Palm Beach County. The $36 \%$ compares to $32 \%$ in 2004.

See the "Local Adult Children" section in Chapter 10 for a comparison with other Jewish communities of the percentage of households age 75 and over with local adult children.

Table 4-40 shows that 29\% of adult children from households in which the respondent is age 50 or over who have established their own homes live in Miami. The $29 \%$ is about average among about 25 comparison Jewish communities and compares to $45 \%$ in Washington, $42 \%$ in Cleveland, $11 \%$ in South Palm Beach, and 10\% in West Palm Beach. The $29 \%$ does not include $10 \%$ of adult children who have established their own homes in Broward County and 3\%, in Palm Beach County. The 29\% compares to 26\% in 2004.

Comparisons Among Population Subgroups. Table 4-38 shows that, overall, 36\% of households in which the respondent is age 50 or over have local adult children. The percentage is much higher in:

- households in South Beach (48\%)
- elderly couple households (49\%)

The percentage is much lower in:

- part-year households (18\%)
- households in residence in Miami for 0-4 years (14\%)
- households with children (18\%) and non-elderly single households (18\%)

## Age and Sex Distribution of Persons in Jewish Households

The age and sex distribution of a population is among the most important demographic indicators. It is a major determinant of the types of programs a Jewish community must offer. Age is related to everything from levels of religious observance to synagogue membership and levels of philanthropy. Table 5-1 shows the age and sex distribution of all persons in Jewish households in Miami. Table 5-12 shows the age distribution of Jews.

Table 5-2 shows age distribution comparisons with other Jewish communities across six age groups.

## Children Age 0-17

Table 5-1 shows that 9,987 children age 0-5 live in Jewish households, comprising 8\% of persons in Jewish households. There are 7,912 children age 6-12, comprising 6\% of persons in Jewish households, and 6,096 children age 13-17, comprising $5 \%$ of persons in Jewish households. In total, 23,995 children age 0-17 live in Jewish households, comprising 19\% of persons in Jewish households.

The number of children age 0-4 in Jewish households (8,301 children) is higher than the number of children age 5-9 ( 5,837 children), age 10-14 ( 5,447 children), and age 15-19 ( 6,744 persons). This is in contrast to age distribution for these age groups in 2004, when the number of children age $0-4$ was lower than the number of children age $5-9$, which, in turn, was lower than the number of children age 10-14, which, in turn, was lower than the number of persons age 15-19.

Community Comparisons. Table 5-3 shows that the 19\% of children age 0-17 in Jewish households is about average among about 55 comparison Jewish communities and compares to 24\% in Atlanta, 23\% in both New York and Washington, 22\% in Cleveland, $15 \%$ in Broward, and 9\% in both South Palm Beach and West Palm Beach. The 19\% compares to $18 \%$ in 2004 and $17 \%$ in 1994. The 19\% compares to $19 \%$ nationally, $22 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 23\% of all Americans (both Jewish and non-Jewish) as of 2013.

Persons Age 18-34
Table 5-1 shows that 18\% (22,698 persons) of persons in Jewish households are age 18-34.

Community Comparisons. Table 5-4 shows that the 18\% of persons age 18-34 in Jewish households is about average among about 55 comparison Jewish communities and compares to $22 \%$ in Washington, $19 \%$ in New York, $15 \%$ in both Cleveland and Atlanta, 11\% in Broward, 6\% in West Palm Beach, and 5\% in South Palm Beach. The 18\% compares to $15 \%$ in 2004 and $16 \%$ in 1994. The $18 \%$ compares to $16 \%$ nationally, $24 \%$ all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 24\% of all Americans (both Jewish and non-Jewish) as of 2013.

## Persons Age 35-49

Table 5-1 shows that $14 \%$ (18,676 persons) of persons in Jewish households are age 35-49.

Community Comparisons. Table $\mathbf{5 - 5}$ shows that the $14 \%$ of persons age $\mathbf{3 5 - 4 9}$ in Jewish households is the fifth lowest of about 55 comparison Jewish communities and compares to $24 \%$ in Atlanta, $23 \%$ in Washington, $17 \%$ in both Cleveland and New York, $16 \%$ in Broward, $11 \%$ in West Palm Beach, and 9\% in South Palm Beach. The 14\% compares to $16 \%$ in 2004 and $20 \%$ in 1994. The $14 \%$ compares to $29 \%$ nationally, $23 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 20\% of all Americans (both Jewish and non-Jewish) as of 2013.

## Persons Age 50-64

Table 5-1 shows that 19\% (23,994 persons) of persons in Jewish households are age $50-64$. The percentage of persons age 50-64 can predict, in part, the size of the elderly population over the next 15 years.

Community Comparisons. Table 5-6 shows that the 19\% of persons age 50-64 in Jewish households is about average among about 55 comparison Jewish communities and compares to $28 \%$ in Cleveland, $24 \%$ in Atlanta, $22 \%$ in Washington, $21 \%$ in New York, $17 \%$ in West Palm Beach, 16\% in South Palm Beach, and 12\% in Broward. The 19\% compares to $21 \%$ in 2004 and $16 \%$ in 1994. The 19\% compares to $19 \%$ nationally, $18 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 20\% of all Americans (both Jewish and non-Jewish) as of 2013.

## Elderly Persons Age 65 and Over

Table 5-1 shows that $31 \%$ ( 40,207 persons) of persons in Jewish households are age 65 and over, including 16\% (20,882 persons) who are age 75 and over.

Percentage of Miami-Dade County Elderly Who Are Jewish 11\% of the 352,013 persons age 65 and over in Miami-Dade County as of 2010 live in Jewish households. 13\% of the 165,037 persons age 75 and over in Miami-Dade County as of 2010 live in Jewish households.

Community Comparisons. Table 5-7 shows that the $31 \%$ of persons age 65 and over in Jewish households is well above average among about 55 comparison Jewish communities and compares to 62\% in South Palm Beach, 57\% in West Palm Beach, 46\% in Broward, 20\% in New York, 18\% in Cleveland, 11\% in Atlanta, and 10\% in Washington. The $31 \%$ compares to $30 \%$ in 2004 and $31 \%$ in 1994. The $31 \%$ compares to $16 \%$ nationally, $14 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 14\% of all Americans (both Jewish and non-Jewish) as of 2013.

Table 5-8 shows that the 40,207 persons age 65 and over in Jewish households is the eighth highest of about 55 comparison Jewish communities and compares to 354,000 persons in New York, 123,471 persons in Broward, 84,111 persons in South Palm Beach, 78,391 persons in West Palm Beach, 26,779 persons in Washington, 17,730 persons in Atlanta, and 17,400 persons in Cleveland. The 40,207 persons compares to 36,754 persons in 2004 and 45,886 persons in 1994.

Table 5-9 shows that the $16 \%$ of persons age 75 and over in Jewish households is the eighth highest of about 55 comparison Jewish communities and compares to $40 \%$ in South Palm Beach, 32\% in West Palm Beach, 29\% in Broward, 12\% in New York, 9\% in Cleveland, and 5\% in both Atlanta and Washington. The 16\% compares to 18\% in 2004 and $15 \%$ in 1994. The $16 \%$ compares to $8 \%$ nationally, $7 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 6\% of all Americans (both Jewish and non-Jewish) as of 2013.

Age Distribution of Elderly Persons. Table 5-1 shows that 48\% of elderly persons in Jewish households are age 65-74, which compares to $51 \%$ nationally, $52 \%$ of all elderly residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 56\% of all elderly Americans (both Jewish and non-Jewish) as of 2013. The 48\% compares to 42\% in 2004 and 53\% in 1994.
$34 \%$ of elderly persons in Jewish households are age 75-84, which compares to 40\% nationally, $34 \%$ of all elderly residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 30\% of all elderly Americans (both Jewish and non-Jewish) as of 2013. The $34 \%$ compares to $42 \%$ in 2004 and $33 \%$ in 1994.

18\% of elderly persons in Jewish households are age 85 and over, compared to 9\% nationally, $13 \%$ of all elderly residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 14\% of all elderly Americans (both Jewish and non-Jewish) as of 2013. The $18 \%$ compares to $16 \%$ in 2004 and $14 \%$ in 1994.

Thus, elderly persons in Jewish households in Miami are older than elderly persons in Jewish households nationally, all elderly residents (both Jewish and non-Jewish) of MiamiDade County as of 2010, and all elderly Americans (both Jewish and non-Jewish) as of 2013. (The percentages for elderly persons in Jewish households in Miami and nationally do not include persons in nursing homes who do not have their own telephone numbers.)

In 2014, a higher percentage of elderly persons in Jewish households is age 65-74 and a lower percentage is age 75-84 than in 2004, with the percentage age 85 and over being two percentage points higher.

## Voting Age Population (Age 18 and Over)

Table 5-1 shows that $82 \%$ ( 105,705 persons) of persons in Jewish households are of voting age (age 18 and over). The $82 \%$ compares to $80 \%$ nationally, $78 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 77\% of all Americans (both Jewish and non-Jewish) as of 2013. The 82\% compares to 82\% in 2004 and 83\% in 1994. The voting age population increased by more than 6,000 persons from 2004-2014. See the "United States Citizenship" section in Chapter 4 for the percentage of respondents who are US citizens and the "Registered to Vote" section in Chapter 16 for the percentage who are registered to vote.

## Median Age

Table 5-1 shows that the median age of persons in Jewish households is 49.5 years. The median age of males in Jewish households ( 46.4 years) is lower than the median age of females in Jewish households (52.5 years).

Community Comparisons. Table $\mathbf{5 - 1 0}$ shows that the median age of 49.5 years is above average among about 55 comparison Jewish communities and compares to 70.9 years in South Palm Beach, 68.5 years in West Palm Beach, 59.4 years in Broward, 47.1 years in Cleveland, 43.3 years in Atlanta, 42.8 years in New York, and 38.8 years in Washington. The 49.5 years compares to 50.7 years in 2004 and 48.1 years in 1994. The 49.5 years compares to 38.8 years nationally, 38.2 years for all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2010, and 37.6 years for all Americans (both Jewish and non-Jewish) as of 2013.

## Percentage Female

Table $5-1$ shows that $53 \%$ of persons in Jewish households are female.
Community Comparisons. Table $5-11$ shows that the $53 \%$ female is about average among about 50 comparison Jewish communities and compares to $56 \%$ in South Palm Beach, $55 \%$ in Broward, $54 \%$ in West Palm Beach, $52 \%$ in Cleveland, $51 \%$ in both Atlanta and Washington, and $50 \%$ in New York. The 53\% compares to $54 \%$ in both 2004 and 1994. The $53 \%$ compares to $51 \%$ nationally, $52 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2012, and 51\% of all Americans (both Jewish and non-Jewish) as of 2013.

Table 5-1 shows that $57 \%$ of persons age 65 and over in Jewish households are female. The $57 \%$ compares to $55 \%$ nationally, $58 \%$ of all residents (both Jewish and non-Jewish) age 65 and over of Miami-Dade County as of 2010 and $56 \%$ of all Americans (both Jewish and non-Jewish) age 65 and over as of 2013. The 57\% compares to $57 \%$ in 2004 and 58\% in 1994. (The $57 \%$ of persons age 65 and over in Jewish households in Miami who are female does not include persons in nursing homes who do not have their own telephone numbers.)

## Age Distribution of Jews

Table 5-12, in contrast to Table 5-1, shows the age distribution of the $94 \%$ of persons in Jewish households in Miami who are Jewish. (See the "Persons in Jewish Households Who Are Jewish" section in Chapter 6 for a comparison of the percentage who are Jewish with other Jewish communities.) In addition, Table 5-12 shows the number of Jews and the number of non-Jews in Jewish households in each age group and the percentage of each age group who are Jewish and non-Jewish.

Table 5-12 shows that $19 \%$ ( 23,340 persons) of Jews in Jewish households are age 0-17; $17 \%$ ( 21,018 persons) are age 18-34; 14\% (16,619 persons) are age $35-49 ; 19 \% ~(22,607$ persons) are age $50-64$; and $32 \%$ ( 38,737 persons) are age 65 and over, including $17 \%$ (20,407 persons) who are age 75 and over.

9,776 children age $0-5,7,576$ children age $6-12$, and 5,988 children age $13-17$ who are being raised Jewish or part Jewish live in Miami. In total, 23,340 children age 0-17 in Jewish households who are being raised Jewish or part Jewish live in Miami. Another 655 children age 0-17 in Jewish households (3\% of all children age 0-17 who live in Jewish households) are not being raised Jewish. Part Jewish children are included in Table 5-12 as Jewish. (See the "Religion of Children in Jewish Households" section in Chapter 6 for a discussion of the impact of intermarriage on the religion of children in Jewish households.)
$\boldsymbol{\checkmark}$ Of the 9,776 Jewish and part Jewish children age 0-5, 93\% (9,053 children) are Jewish and 723 children are part Jewish.
$\checkmark$ Of the 7,576 Jewish and part Jewish children age 6-12, 98\% (7,440 children) are Jewish and 136 children are part Jewish.
$\checkmark$ Of the 5,988 Jewish and part Jewish children age 13-17, 98\% (5,850 children) are Jewish and 138 children are part Jewish.
$\checkmark$ Of the 23,340 Jewish and part Jewish children age 0-17, 96\% (22,343 children) are Jewish and 997 children are part Jewish.

Note that "part Jewish" was not read to the respondent as a possible response to the question asking whether children in the households are currently Jewish. The respondents volunteered these responses, which may explain why the percentage of part Jewish children is much lower in Miami than in the 2013 Pew study.

97\% of children age 0-17 in Jewish households are Jewish or part Jewish, including 98\% of children age $0-5,96 \%$ of children age 6-12, and 98\% of children age 13-17."

The median age for Jews in Jewish households is 50.1 years, compared to 45.6 years for non-Jews in Jewish households and 49.5 years for all persons in Jewish households.

Community Comparisons. Note that to be comparable with the data from other Jewish communities, Tables 5-13 to 5-16 exclude part Jewish children and include children being raised Jewish only to be comparable to the other Jewish communities.

Table 5-13 shows that the 9,053 children age $\mathbf{0} \mathbf{- 5}$ being raised Jewish only is the fifth highest of about 50 comparison Jewish communities and compares to 107,274 children in New York, 15,050 children in Washington, 11,013 children in Atlanta, 8,400 children in Broward, 4,200 children in Cleveland, 3,272 children in South Palm Beach, and 2,472 children in West Palm Beach. The 9,053 children compares to 5,727 children in 2004 and 6,970 children in 1994.

Table $\mathbf{5 - 1 4}$ shows that the 7,440 children age $\mathbf{6 - 1 2}$ being raised Jewish only is the eighth highest of about 50 comparison Jewish communities and compares to 125,799 children in New York, 17,630 children in Washington, 12,720 children in Broward, 8,449 children in Atlanta, 6,600 children in Cleveland, 4,319 children in South Palm Beach, and 3,090 children in West Palm Beach. The 7,440 children compares to 7,861 children in 2004 and 9,007 children in 1994.

Table $5-15$ shows that the 5,850 Jewish children age $13-17$ being raised Jewish only is well above average among about 50 comparison Jewish communities and compares to 95,586 children in New York, 13,975 children in Washington, 8,880 children in Broward, 8,658 children in Atlanta, 5,500 children in Cleveland, 3,403 children in South Palm Beach, and 2,348 children in West Palm Beach. The 5,850 children compares to 6,177 children in 2004 and 5,468 children in 1994.

Table 5-16 shows that the 22,343 children age $\mathbf{0 - 1 7}$ being raised Jewish only is the eighth highest of about 50 comparison Jewish communities and compares to 328,659 children in New York, 46,655 children in Washington, 30,000 children in Broward, 28,120 children in Atlanta, 16,300 children in Cleveland, 10,994 children in South Palm Beach, and 7,910 children in West Palm Beach. The 22,343 children compares to 19,765 children in 2004 and 21,445 children in 1994.

Table 5-12 shows that $19 \%$ of Jews in Jewish households in Miami are age 0-17, which compares to 20\% nationally. 32\% of Jews in Jewish households in Miami are age 65 and over, which compares to $19 \%$ nationally. 17\% of Jews in Jewish households in Miami are age 75 and over, which compares to $9 \%$ nationally. The median age for Jews in Jewish households in Miami is 50.1 years, which compares to 42.0 years nationally.

## Age Distribution by Geographic Area

Table 5-19 shows the age distribution of persons in Jewish households in Miami in each large geographic area. Tables 5-20 to 5-22 show the age distribution in each geographic subarea.

While Tables 5-19 to 5-22 show the age distribution of persons in Jewish households in each geographic area (the columns add to 100\%), Tables 5-23 to 5-26 show where the various age groups live (the rows add to 100\%).

As an example of the difference between the two sets of tables, note that while Table 5-19 shows that 19\% of persons in Jewish households in North Dade are children age 0-17, Table 5-23 shows that 55\% of children age 0-17 in Jewish households live in North Dade. As a second example, while Table 5-19 shows that $29 \%$ of persons in Jewish households in South Dade are age 65 and over, Table 5-23 shows that 29\% of persons age 65 and over in Jewish households live in South Dade.

Table 5-18 shows a summary of the results in Tables 5-19 to 5-22. Table 5-18 shows that the median age for persons in Jewish households is higher in North Dade (53.6 years) and South Dade (51.1 years) than in The Beaches (36.2 years).

The percentage of persons age 0-17 in Jewish households is higher in The Beaches (25\%) than in North Dade (19\%) and South Dade (14\%).

The percentage of persons age 65 and over in Jewish households is higher in North Dade (36\%) than in South Dade (29\%) and The Beaches (20\%).

The percentage of persons age 75 and over in Jewish households is higher in North Dade (21\%) than in South Dade (11\%) and The Beaches (10\%).

## CHANGES IN THE AGE DISTRIBUTION, 1994-2014

Table 5-28 shows the change in the age distribution of persons in Jewish households in Miami from 1994-2014. Tables 5-29 to 5-31 show comparable information in each large geographic area. The results are summarized in Table 5-27.

In comparing the age distributions from 1994-2014, the most significant findings are:

1. The overall median age of persons in Jewish households remained about the same (48 years in 1994; 51 years in 2004; and 50 years in 2014).
2. The median age of persons in Jewish households in North Dade remained about the same ( 55 years in 1994 and 54 years in both 2004 and 2014), while South Dade aged considerably (from a median age of 40 years in 1994 to 51 years in 2014) and The Beaches is now a young area (from a median age of 55 years in 1994 to 36 years in 2014).
3. The percentage of children age 0-17 in Jewish households increased in North Dade (from 13\% in 1994 to $19 \%$ in 2014) and increased significantly in The Beaches (from $16 \%$ in 1994 to $25 \%$ in 2014), while the percentage decreased significantly in South Dade (from $22 \%$ in 1994 to $14 \%$ in 2014).
4. The percentage of persons age 18-34 in Jewish households increased significantly in The Beaches (from 14\% in 1994 to $24 \%$ in 2014), while the percentages remained about the same in North Dade (16\% in 1994 and 14\% in 2014) and South Dade (19\% in 1994 and 21\% in 2014).
5. The percentage of persons age 65 and over in Jewish households decreased in North Dade (from $41 \%$ in 1994 to $36 \%$ in 2014) and decreased significantly in The Beaches (from $40 \%$ in 1994 to $20 \%$ in 2014), while the percentage in South Dade increased significantly (from 14\% in 1994 to $29 \%$ in 2014).
6. The percentage of persons age 75 and over in Jewish households remained about the same in North Dade (20\% in 1994 and $21 \%$ in 2014), increased in South Dade (from $5 \%$ in 1994 to $11 \%$ in 2014), and decreased significantly in The Beaches (from $21 \%$ in 1994 to $10 \%$ in 2014).

## Miami

## Percentage of Persons in Jewish Households

Table 5-27 shows that the median age of persons in Jewish households remained relatively about the same at 48 to 51 years from 1994-2014.

The percentage of children age 0-17 increased from 17\% in 1994 to 18\% in 2004 and 19\% in 2014.

The percentage of persons age 18-34 decreased from $16 \%$ in 1994 to $15 \%$ in 2004, and then increased to $18 \%$ in 2014.

Reflecting the aging of the baby boomers, the percentage of persons age 35-49 decreased from 20\% in 1994 to 16\% in 2004 and 14\% in 2014.

The percentage of persons age 50-64 increased from $16 \%$ in 1994 to $21 \%$ in 2004, and then decreased to 19\% in 2014.

The percentage of persons age 65 and over remained about the same at $30 \%-31 \%$ from 1994-2014.

The percentage of persons age 75 and over increased from 15\% in 1994 to 18\% in 2004, and then decreased to $16 \%$ in 2014.

## Number of Persons in Jewish Households

Table 5-28 shows that the number of children age 0-17 in Jewish households, after decreasing by 2,624 persons from 1994-2004, increased by 2,283 persons from 20042014.

The number of persons age 18-34, after decreasing by 5,968 persons from 1994-2004, increased by 4,624 persons from 2004-2014.

The number of persons age 35-49, after decreasing by 15,681 persons from 1994-2004, decreased by less than 1,000 persons from 2004-2014.

The number of persons age 50-64 remained about the same over the past two decades.
The number of persons age 65 and over, after decreasing by 9,132 persons from 19942004, increased by 3,453 persons from 2004-2014. These changes reflect primarily the changes in the number of persons age 65-74.

The number of persons age 75 and over remained about the same over the past two decades; however, the number of persons age 75-84 decreased by 2,038 persons from 2004-2014, while the number of persons age 85 and over increased by 1,449 persons from 2004-2014. From 1994-2004, the number of persons age 75-84 and age 85 and over remained about the same.

## North Dade

## Percentage of Persons in Jewish Households

Table 5-27 shows that the median age of persons in Jewish households in North Dade remained about the same from 1994-2014 (55 years in 1994 and 54 years in both 2004 and 2014).

The percentage of children age 0-17 increased from 13\% in 1994 to 17\% in 2004 and 19\% in 2014.

The percentage of persons age 18-34 decreased from $16 \%$ in 1994 to $14 \%$ in both 2004 and 2014.

The percentage of persons age $\mathbf{3 5 - 4 9}$ increased from $15 \%$ in 1994 to $16 \%$ in 2004, and then decreased to $14 \%$ in 2014.

The percentage of persons age 50-64 increased from 16\% in 1994 to 17\% in 2004 and 18\% in 2014.

The percentage of persons age 65 and over decreased from 41\% in 1994 to 38\% in 2004 and $36 \%$ in 2014.

The percentage of persons age 75 and over increased from 20\% in 1994 to $23 \%$ in 2004, and then decreased to $21 \%$ in 2014.

## Number of Persons in Jewish Households

Table 5-29 shows that the number of children age 0-17 in Jewish households in North Dade increased by 1,868 persons from 1994-2004 and by 3,681 persons from 2004-2014.

The number of persons age 18-34, after decreasing by 1,571 persons from 1994-2004, increased by 1,587 persons from 2004-2014.

The number of persons age 35-49 remained stabled from 1994-2014.
The number of persons age 50-64, after remaining about the same from 1994-2004, increased by 2,537 persons from 2004-2014.

The number of persons age 65 and over, after decreasing by 3,499 persons from 19942004, increased by 2,877 persons from 2004-2014.

The number of persons age 75 and over increased by 1,389 persons from 1994-2004 and then by 1,006 from 1994-2014. The number of persons age 85 and over increased by 442 persons from 1994-2004 and then increased by 1,623 persons from 2004-2014.

## South Dade

## Percentage of Persons in Jewish Households

Table 5-27 shows that the median age of persons in Jewish households in South Dade increased from 40 years in 1994 to 47 years in 2004 and 51 years in 2014.

The percentage of children age 0-17 decreased from $21 \%-22 \%$ in 1994 and 2004 to $14 \%$ in 2014.

The percentage of persons age 18-34 decreased from $19 \%$ in 1994 to $16 \%$ in 2004 , and then increased to $21 \%$ in 2014.

The percentage of persons age 35-49 decreased from $27 \%$ in 1994 to $17 \%$ in 2004 and 15\% in 2014.

The percentage of persons age 50-64 increased from $18 \%$ in 1994 to $26 \%$ in 2004, and then decreased to $23 \%$ in 2014.

The percentage of persons age 65 and over increased from $14 \%$ in 1994 to $21 \%$ in 2004 and $29 \%$ in 2014.

The percentage of persons age 75 and over increased from 5\% in 1994 to 10\%-11\% in 2004 and 2014.

## Number of Persons in Jewish Households

Table 5-30 shows that the number of children age 0-17 in Jewish households in South Dade decreased by 2,279 persons from 1994-2004 and by 3,281 persons from 2004-2014.

The number of persons age 18-34, after decreasing by 2,885 persons from 1994-2004, increased by 1,408 persons from 2004-2014.

The number of persons age 35-49 decreased by 6,054 persons from 1994-2004 and by 1,574 persons from 2004-2014.

The number of persons age 50-64 after increasing by 1,858 persons from 1994-2004, decreased by 2,032 persons from 2004-2014.

The number of persons age 65 and over increased by 1,688 persons from 1994-2004 and by 2,548 persons from 2004-2014.

The number of persons age 75 and over increased by 2,160 persons from 1994-2004 and then by 117 persons from 1994-2014. The number of persons age 85 and over increased by 718 persons from 1994-2004 and then increased by 162 persons from 2004-2014.

## The Beaches

## Percentage of Persons in Jewish Households

Table 5-27 shows that the median age of persons in Jewish households in The Beaches decreased from 55 years in 1994 to 50 years in 2004 and 36 years in 2014.

The percentage of children age 0-17 increased from 16\%-17\% in 1994 and 2004 to $25 \%$ in 2014.

The percentage of persons age 18-34 decreased from $14 \%$ in 1994 to $16 \%$ in 2004, and to $24 \%$ in 2014.

The percentage of persons age 35-49 remained about the same from 1994-2014.
The percentage of persons age 50-64 increased from $14 \%$ in 1994 to $21 \%$ in 2004 , and then decreased to $14 \%$ in 2014.

The percentage of persons age 65 and over decreased from 40\% in 1994 to 30\% in 2004 and $20 \%$ in 2014.

The percentage of persons age 75 and over increased from $21 \%$ in 1994 to $17 \%$ in 2004 and 10\% in 2014.

Number of Persons in Jewish Households
Table 5-31 shows that the number of children age 0-17 in Jewish households in The Beaches decreased by 1,900 persons from 1994-2004, and then increased by 1,752 persons from 2004-2014.

The number of persons age 18-34, after decreasing by 1,519 persons from 1994-2004, increased by 1,602 persons from 2004-2014.

The number of persons age 35-49, after decreasing by 2,236 from 1994-2004, increased by 308 persons from 2004-2014.

The number of persons age 50-64 decreased by 719 persons from 1994-2004 and by 1,222 persons from 2004-2014.

The number of persons age 65 and over decreased by 7,591 persons from 1994-2004 and by 2,025 persons from 2004-2014.

The number of persons age 75 and over decreased by 3,754 persons from 1994-2004 and then by 352 persons from 1994-2014. The number of persons age 85 and over decreased by 1,544 persons from 1994-2004 and then by 352 persons from 2004-2014.

## Age and Sex Distribution of HOLOCAUST SURVIVORS

Table 5-33 shows the age and sex distribution of Holocaust survivors (survivors) in Miami. The median age for both males and females is about 80 years. $64 \%$ of survivors are female; $87 \%$ are age 75 and over. $43 \%$ of survivors are age 75-79.

The $87 \%$ of survivors age 75 and over compares to $71 \%$ in 2004.
These data probably underestimate the number and age of Holocaust survivors who are certainly disproportionately represented among Jews in nursing homes and among those who were judged unable to complete a telephone survey by themselves or a caregiver.

## Age Distribution by Synagogue Membership, Jewish Community Center Membership, and Jewish Organization Membership

Tables 5-34 and 5-35 show the age distribution of persons in Jewish households in Miami by synagogue membership, Chabad Attendance, JCC membership, and Jewish organization membership.

## Synagogue Membership

Compared to persons in synagogue non-member households, persons in synagogue member households are more likely to be:

- age 0-17

Compared to persons in synagogue non-member households, persons in synagogue member households are less likely to be:

- age 65 and over

The median age of synagogue member households is 43 years, compared to 55 years for synagogue non-member households.
$\checkmark 19,996$ households are synagogue members. The average household size for synagogue member households is 2.8 persons. Thus, 56,275 persons live in synagogue member households.

## Households Who Attended Chabad in the Past Year

Compared to households in which no person attended Chabad in the past year, persons in households in which someone attended Chabad in the past year are more likely to be:

- age 0-17 and age 18-34

Compared to households in which no person attended Chabad in the past year, persons in households in which someone attended Chabad in the past year are less likely to be:

- age 65 and over and age 75 and over

The median age for persons households who attended Chabad in the past year is 35 years, compared to 57 years for Chabad non-attending households.
$\checkmark 14,315$ households attended Chabad activities in the past year. The average household size for Chabad households is 2.9 persons. Thus, 41,403 persons live in Chabad households.

## JCC Membership

Compared to persons in JCC non-member households, persons in JCC member households are more likely to be:

- age 0-17

Compared to persons in JCC non-member households, persons in JCC member households are less likely to be:

- age 65 and over and age 75 and over

The median age of persons in JCC member households is 38 years, compared to 53 years for persons in JCC non-member households.
$\checkmark 6,740$ households are JCC members. The average household size for JCC member households is 3.1 persons. Thus, 20,748 persons live in JCC member households.

## Jewish Organization Membership

The age distribution of Jewish organization member households is similar to that for Jewish organization non-member households.

The median age of persons in Jewish organization member households and Jewish organization non-member households is 50 years.
$\checkmark 13,312$ households are Jewish organization members. The average household size for Jewish organization member households is 2.3 persons. Thus, 30,762 persons live in Jewish organization member households.

## Household Size

Table 5-36 shows that the average household size of Jewish households in Miami is 2.33 persons. $31 \%$ of households are one-person households, $37 \%$ are two-person households, $13 \%$ are three-person households, $12 \%$ are four-person households, $5 \%$ are five-person households, and 3\% contain six or more persons. In total, 19\% of households contain four or more persons.

Community Comparisons. Table $\mathbf{5 - 3 7}$ shows that the 2.33 average household size is below average among about 55 comparison Jewish communities and compares to 2.57 in Cleveland, 2.56 in Atlanta, 2.55 in New York, 2.43 in Washington, 2.02 in Broward, 1.99 in West Palm Beach, and 1.87 in South Palm Beach. The 2.33 compares to 2.25 in 2004 and 2.19 in 1994. The 2.33 compares to 2.31 nationally, 2.83 of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2010, and 2.63 for all American households (both Jewish and non-Jewish) as of 2012.

Table 5-38 shows that the 31\% of one-person households is the fifth highest of about 55 comparison Jewish communities and compares to $35 \%$ in both South Palm Beach and Broward, 30\% in New York, 26\% in Washington, 25\% in West Palm Beach, 24\% in Cleveland, and 18\% in Atlanta. The 31\% compares to $32 \%$ in 2004 and $31 \%$ in 1994. The $31 \%$ compares to $30 \%$ nationally, $26 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 27\% of all American households (both Jewish and non-Jewish) as of 2010.

The $19 \%$ of households with four or more persons is below average among about 50 comparison Jewish communities and compares to 27\% in Atlanta, 26\% in Cleveland, 24\% in Washington, $23 \%$ in New York, 12\% in Broward, and $7 \%$ in both South Palm Beach and West Palm Beach. The 19\% compares to $17 \%$ in 2004 and $15 \%$ in 1994. The 19\% compares to $19 \%$ nationally and $23 \%$ of all American households (both Jewish and non-Jewish) as of 2010.

## Comparisons Among Population Subgroups.

## Average Household Size

Table 5-36 shows that, overall, the average household size is 2.33 persons. The average household size is much higher for:

- households in East Kendall (2.87 persons)
- Hispanic households (2.92 persons), Sephardic households (2.93 persons), and Israeli households (2.96 persons)
- households in single family homes (2.94 persons)
- Orthodox households (3.34 persons)
- synagogue member households (2.81 persons), households who attended Chabad in the past year ( 2.89 persons), and JCC member households (3.08 persons)

The average is much lower for:

- part-year households (1.77 persons)
- Holocaust survivor households (1.86 persons)
- households in high rise buildings (1.84 persons)

## One-Person Households

Table 5-36 shows that, overall, 31\% of households are one-person households. The percentage is much higher for:

- households in high rise buildings (44\%) and townhouses (43\%)

The percentage is much lower for:

- households in East Kendall (16\%)
- FSU households (16\%) and Hispanic households (17\%)
- households in single family homes (14\%)
- Orthodox households (20\%)
- synagogue member households (18\%), households who attended Chabad in the past year (21\%), and JCC member households (19\%)

Four or More Person Households
Table 5-36 shows that, overall, $19 \%$ of households contain four or more persons. The percentage is much higher for:

- households in East Kendall (43\%) and North Beach (30\%)
- Hispanic households (32\%), Sephardic households (36\%), and Israeli households (38\%)
- households in single family homes (34\%)
- Orthodox households (42\%)
- synagogue member households (30\%), households who attended Chabad in the past year (33\%), and JCC member households (39\%)

The percentage is much lower for:

- part-year households (3\%)
- Holocaust survivor households (2\%)
- households in high rise buildings (7\%)

## Household Structure

The household structure of Jewish households in Miami is determined by a combination of age, sex, marital status, and the relationship between persons in the household. In most Jewish communities, many services offered by the organized Jewish community, such as synagogues and Jewish Community Centers, are offered under the assumption that households with children is the predominant household structure. Table 5-39 shows that Miami has $23 \%$ households with children age 0-17 at home, $9 \%$ households with only adult children age 18-29 at home, 28\% married households with no children at home, 31\% single person households, and 10\% other household structures.

Note that same-sex marriage was not legal in Florida at the time of the survey, but responses of same-sex couples being married were recorded as such in their own categories.

## Households with Children Age 0-17 at Home

Table 5-39 shows that 23\% (12,922 households) of households are households with children age 0-17 at home, including $21 \%$ (11,641 households) who are married couples, $0 \%$ (167 households) who are unmarried (opposite-sex) couples, $2 \%$ ( 1,003 households) who are single parent households, and $0 \%$ (111 households) who are other households with a child. Single parent households are households with one parent and children age 0-17 at home.
$\boldsymbol{\checkmark} 22 \%$ (12,254 households) of households with children age 0-17 at home contain Jewish or part Jewish children.

Community Comparisons. Table 5-40 shows that the $21 \%$ of married households with children age 0-17 at home is below average among about 50 comparison Jewish communities and compares to 34\% in Atlanta, 27\% in Washington, 22\% in Cleveland, 20\% in New York, 14\% in Broward, 9\% in West Palm Beach, and 8\% in South Palm Beach. The $21 \%$ compares to $19 \%$ in 2004 and $20 \%$ in 1994. The $21 \%$ compares to $19 \%$ nationally, 19\% of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 20\% of all American households (both Jewish and non-Jewish) as of 2012.

The $2 \%$ of single parent households with children age 0-17 at home is about average among about 50 comparison Jewish communities and compares to 5\% in both Cleveland and New York, 4\% in Atlanta and Washington, 2\% in Broward, and 1\% in both South Palm Beach and West Palm Beach. The 2\% compares to 2\% in both 2004 and 1994. The 2\% compares to $3 \%$ nationally, $12 \%$ of all households (both Jewish and non-Jewish) in MiamiDade County as of 2012, and 10\% of all American households (both Jewish and non-Jewish) as of 2012.

The $23 \%$ of households with children age 0-17 at home is below average among about 55 comparison Jewish communities and compares to 38\% in Atlanta, 31\% in Washington, 28\% in Cleveland, 25\% in New York, 16\% in Broward, 10\% in West Palm Beach, and 9\% in South Palm Beach. The 23\% compares to $21 \%$ in 2004 and 22\% in 1994. The 23\% compares to $22 \%$ nationally, $36 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 30\% of all American households (both Jewish and non-Jewish) as of 2012.

## Households with Only Adult Children Age 18-29 at Home

Table 5-39 shows that 9\% (4,735 households) of households are households with only adult children age 18-29 at home, of whom $73 \%$ are married households.

Community Comparisons. To compare the results for Miami to other Jewish communities, the $5 \%$ of households in which a parent lives with adult children age 30 and over must be added to the $9 \%$ of households with only adult children age 18-29 at home. Table 5-40 shows that the $13 \%$ of households with only adult children age 18 and over at home is about average among about 40 comparison Jewish communities and compares to $8 \%$ in Washington, $6 \%$ in Broward, and $5 \%$ in both South Palm Beach and West Palm Beach. The $12 \%$ compares to $11 \%$ in 2004 and $7 \%$ in 1994. The $12 \%$ compares to $6 \%$ nationally.

## Married Households-No Children at Home

Table 5-39 shows that $28 \%$ ( 15,318 households) of households are married households with no children at home, including $1 \%$ whose heads of household is under age $35 ; 1 \%$, age $35-49 ; 7 \%$, age $50-64$; and 19\%, age 65 and over.

Community Comparisons. Table 5-41 shows that the $28 \%$ of married households with no children at home is about average among about 50 comparison Jewish communities and compares to $54 \%$ in West Palm Beach, $48 \%$ in South Palm Beach, $38 \%$ in both Cleveland and Broward, 36\% in Atlanta, 25\% in New York, and 24\% in Washington. The $28 \%$ compares to $31 \%$ in 2004 and $33 \%$ in 1994. The $28 \%$ compares to $26 \%$ nationally and $29 \%$ of all American households (both Jewish and non-Jewish) as of 2012.

Table $\mathbf{5 - 4 1}$ shows that the $1 \%$ of married households under age 35 with no children at home is about average among about 50 comparison Jewish communities and compares to $5 \%$ in both Atlanta and Washington, $2 \%$ in New York, $1 \%$ in each of Cleveland, West Palm Beach, and Broward, and 0\% in South Palm Beach. The 1\% compares to 2\% in 2004 and $3 \%$ in 1994.

The $1 \%$ of married households age 35-49 with no children at home is about average among about 50 comparison Jewish communities and compares to 3\% in Washington, 2\% in each of Cleveland, New York, and Broward, and 1\% in both South Palm Beach and West Palm Beach. The 1\% compares to 2\% in 2004 and 3\% in 1994.

The 7\% of married households age 50-64 with no children at home is about average among about 50 comparison Jewish communities and compares to 21\% in Cleveland, 11\% in both West Palm Beach and Washington, 9\% in South Palm Beach, and 7\% in both New York and Broward. The 7\% compares to 8\% in both 2004 and 1994.

The 19\% of married households age 65 and over with no children at home is above average among about 50 comparison Jewish communities and compares to $41 \%$ in West Palm Beach, 38\% in South Palm Beach, 28\% in Broward, 14\% in Cleveland, 13\% in New York, and 6\% in both Atlanta and Washington. The 19\% compares to 19\% in 2004 and 20\% in 1994.

## Single Person Households

Table 5-39 shows that $31 \%$ ( 17,267 households) of households are single person households, including $21 \%$ ( 11,753 households) who are elderly single households, the majority of whom are elderly single female households. $5 \%$ of households are single male households age 65 and over and $16 \%$ are single female households age 65 and over. The imbalance between males and females among elderly single households is consistent with the findings of almost all Jewish community studies. 10\% (5,514 households) of households are non-elderly single households.
(Single person households [one-person households] are discussed further in the "Household Size" section in this Chapter. Single adults and single Jewish adults are discussed further in the "Marital Status" and "Single Jewish Adults" sections of this Chapter, respectively.)

Community Comparisons. Table 5-42 shows that the 10\% of single person households under age 65 is about average among about 55 comparison Jewish communities and compares to $17 \%$ in Washington, 15\% in Atlanta, 14\% in New York, 11\% in Cleveland, 6\% in Broward, 5\% in South Palm Beach, and 4\% in West Palm Beach. The 10\% compares to $11 \%$ in both 2004 and 1994. The 10\% compares to $18 \%$ of all American households (both Jewish and non-Jewish) as of 2012.

The $5 \%$ of single male households age 65 and over is about average among about 55 comparison Jewish communities and compares to 6\% in South Palm Beach, 5\% in New York, 4\% in each of Cleveland, West Palm Beach, and Broward, 3\% in Washington, and 2\% in Atlanta. The 5\% compares to 4\% in both 2004 and 1994.

The 16\% of single female households age 65 and over is the seventh highest of about 55 comparison Jewish communities and compares to 25\% in Broward, 24\% in South Palm Beach, 17\% in West Palm Beach, 10\% in New York, 9\% in Cleveland, 6\% in Washington, and 4\% in Atlanta. The 16\% compares to 17\% in both 2004 and 1994.

The $21 \%$ of single households age 65 and over is the fifth highest of about 50 comparison Jewish communities and compares to $30 \%$ in South Palm Beach, 29\% in Broward, 21\% in West Palm Beach, 15\% in New York, 13\% in Cleveland, 9\% in Washington, and 5\% in Atlanta. The 21\% compares to $21 \%$ in 2004 and 20\% in 1994. The 21\% compares to 10\% of all American households (both Jewish and non-Jewish) as of 2012.

## Other Household Structures

Table 5-39 shows that 3\% of households are unmarried couples with no children at home; $1 \%$ are households containing roommates/friends; $5 \%$ are households in which a parent lives with an adult child age 30 and over; $0 \%$ are unmarried same-sex couples with no children at home; and 1\% are other household structures.

Household Structure by Geographic Area. Table 5-44 shows the household structure of Jewish households in each large geographic area. Tables 5-45, 5-46, and 5-47 show the household structure of Jewish households in each geographic area and subarea.

## North Dade

Table 5-44 shows that North Dade has $23 \%$ households with children age 0-17 at home, $6 \%$ households with only adult children age 18-29 at home, $28 \%$ married households with no children at home (including 20\% elderly couple households), and 34\% single person households (including 27\% elderly single households).

Table 5-45 shows household structure by geographic subarea within North Dade.
North Dade Core East has 20\% households with children age 0-17 at home, 6\% households with only adult children age 18-29 at home, $29 \%$ married households with no children at home (including 20\% elderly couple households), and $37 \%$ single person households (including 30\% elderly single households).

North Dade Core West has 26\% households with children age 0-17 at home, 8\% households with only adult children age 18-29 at home, $28 \%$ married households with no children at home (including $21 \%$ elderly couple households), and $28 \%$ single person households (including 24\% elderly single households).

Other North Dade has 29\% households with children age 0-17 at home, $4 \%$ households with only adult children age 18-29 at home, $25 \%$ married households with no children at home (including 19\% elderly couple households), and 34\% single person households (including 19\% elderly single households).

## South Dade

Table 5-44 shows that South Dade has 20\% households with children age 0-17 at home, $13 \%$ households with only adult children age 18-29 at home, 30\% married households with no children at home, and $25 \%$ single person households.

Table 5-46 shows household structure by geographic subarea within South Dade.
West Kendall has $13 \%$ households with children age 0-17 at home, $15 \%$ households with only adult children age 18-29 at home, $34 \%$ married households with no children at home (including 23\% elderly couple households), and $28 \%$ single person households (including 21\% elderly single households).

East Kendall has 34\% households with children age 0-17 at home, 13\% households with only adult children age 18-29 at home, $32 \%$ married households with no children at home (including 20\% elderly couple households), and 16\% single person households (including $9 \%$ elderly single households).

NE South Dade has $24 \%$ households with children age 0-17 at home, $11 \%$ households with only adult children age 18-29 at home, $23 \%$ married households with no children at home (including 14\% elderly couple households), and $27 \%$ single person households (including 8\% elderly single households).

## The Beaches

Table 5-44 shows that The Beaches has 30\% households with children age 0-17 at home, $6 \%$ households with only adult children age 18-29 at home, $22 \%$ married households with no children at home (including 14\% elderly couple households), and $30 \%$ single person households (including 14\% elderly single households).

Table 5-47 shows household structure by geographic subarea within The Beaches.
North Beach has 29\% households with children age 0-17 at home, 5\% households with only adult children age 18-29 at home, 33\% married households with no children at home (including 27\% elderly couple households), and $24 \%$ single person households (including $14 \%$ elderly single households).

Middle Beach has $34 \%$ households with children age 0-17 at home, $9 \%$ households with only adult children age 18-29 at home, $21 \%$ married households with no children at home (including 12\% elderly couple households), and $26 \%$ single person households (including $12 \%$ elderly single households).

South Beach has $26 \%$ households with children age 0-17 at home, $3 \%$ households with only adult children age 18-29 at home, 16\% married households with no children at home (including 7\% elderly couple households), and 39\% single person households (including $14 \%$ elderly single households).

## Summary

The Beaches has the highest percentage of households with children age 0-17 at home. South Dade has the highest percentage of households with only adult children age 18-29. North Dade has the highest percentage of single person households.

By geographic subarea, the highest percentage of households with children age 0-17 at home is in East Kendall (34\%) and Middle Beach (34\%). The highest percentage of households with only adult children age 18-29 at home is in West Kendall (15\%). The highest percentages of married households with no children at home are in West Kendall (34\%), North Beach (33\%), and East Kendall (32\%). The highest percentage of elderly couple households is in North Beach (27\%). The highest percentage of single person households is in South Beach (39\%) and North Dade Core East (37\%). The highest percentage of non-elderly single households is in South Beach (25\%). The highest percentage of elderly single households is in North Dade Core East (30\%).

Geographic Distribution of Household Structures. While Table 5-44 shows the household structure in each geographic area (the columns add to 100\%), Table 5-48 shows where the various household structures live (the rows add to 100\%). As an example of the difference between the two tables, while Table $5-44$ shows that $23 \%$ of households in North Dade are households with children age 0-17 at home, Table 5-48 shows that 54\% of households with children age 0-17 at home live in North Dade.

## Distribution among Large Geographic Areas

Table 5-48 shows that 54\% of households with children age 0-17 at home live in North Dade, $27 \%$ live in South Dade, and $20 \%$ live in The Beaches.

49\% of households with only adult children age 18-29 at home live in South Dade, 40\% live in North Dade, and 11\% live in The Beaches.

49\% of non-elderly couple households live in North Dade, 38\% live in South Dade, and $13 \%$ live in The Beaches.

41\% of non-elderly single households live in North Dade, 35\% live in South Dade, and $24 \%$ live in The Beaches.

58\% of elderly couple households live in North Dade, 30\% live in South Dade, and 11\% live in The Beaches.

69\% of elderly single households live in North Dade, 21\% live in South Dade, and 10\% live in The Beaches.

## North Dade

Table 5-49 shows the geographic distribution of the major household structures within North Dade.
$53 \%$ of households with children age 0-17 at home in North Dade live in North Dade Core East, $27 \%$ live in North Dade Core West, and $20 \%$ live in Other North Dade.
$59 \%$ of households with only adult children age 18-29 at home in North Dade live in North Dade Core East, 33\% live in North Dade Core West, and 8\% live in Other North Dade.

65\% of non-elderly couple households in North Dade live in North Dade Core East, 22\% live in North Dade Core West, and 14\% live in Other North Dade.

57\% of non-elderly single households in North Dade live in North Dade Core East, 31\% live in Other North Dade, and 12\% live in North Dade Core West.

60\% of elderly couple households in North Dade live in North Dade Core East, 26\% live in North Dade Core West, and $14 \%$ live in Other North Dade.
$67 \%$ of elderly single households in North Dade live in North Dade Core East, $22 \%$ live in North Dade Core West, and 11\% live in Other North Dade.

## South Dade

Table 5-50 shows the geographic distribution of the major household structures within South Dade.

43\% of households with children age 0-17 at home in South Dade live in NE South Dade, 30\% live in West Kendall, and 27\% live in East Kendall.
$55 \%$ of households with only adult children age 18-29 at home in South Dade live in West Kendall, 28\% live in NE South Dade, and 16\% live in East Kendall.
$52 \%$ of non-elderly couple households in South Dade live in West Kendall, 30\% live in NE South Dade, and 18\% live in East Kendall.

61\% of non-elderly single households in South Dade live in NE South Dade, 30\% live in West Kendall, and 10\% live in East Kendall.

58\% of elderly couple households in South Dade live in West Kendall, $25 \%$ live in NE South Dade, and 17\% live in East Kendall.

70\% of elderly single households in South Dade live in West Kendall, 20\% live in NE South Dade, and 10\% live in East Kendall.

## The Beaches

Table 5-51 shows the geographic distribution of the major household structures within The Beaches.
$54 \%$ of households with children age 0-17 at home in The Beaches live in Middle Beach, $24 \%$ live in South Beach, and 22\% in North Beach.
$72 \%$ of households with only adult children age 18-29 at home in The Beaches live in Middle Beach, $17 \%$ live in North Beach, and $11 \%$ live in South Beach.

48\% of non-elderly couple households in The Beaches live in Middle Beach, 33\% live in South Beach, and 19\% live in North Beach.

44\% of non-elderly single households in The Beaches live in South Beach, $42 \%$ live in Middle Beach, and 14\% live in North Beach.

45\% of elderly couple households in The Beaches live in North Beach, 42\% live in Middle Beach, and 13\% live in South Beach.
$46 \%$ of elderly single households in The Beaches live in Middle Beach, 30\% live in South Beach, and $24 \%$ live in North Beach.

Changes in Household Structure. Table 5-52 shows the changes in some of the major household structures for Miami as a whole and by large geographic area for 1994, 2004, and 2014. This section mentions those household structures that changed by 5 percentage points or more.

## All

The changes in household structure for the county as a whole over the past two decades are relatively small.

## North Dade

The percentage of households with children age 0-17 at home increased from 14\% in 1994 to $17 \%$ in 2004 and to $23 \%$ in 2014.

The percentage of elderly couple households decreased from $25 \%$ in 1994 to $23 \%$ in 2004 and 20\% in 2014.

## South Dade

The percentage of households with children age 0-17 at home decreased from 32\% in 1994 to $29 \%$ in 2004 and to $20 \%$ in 2014.

The percentage of households with only adult children at home increased from $8 \%$ in 1994 to $11 \%$ in 2004 and $13 \%$ in 2014.

The percentage of non-elderly couple households decreased from 22\% in 1994 to 13\% in 2004 and 11\% in 2014.

The percentage of elderly couple households increased from $11 \%$ in 1994 to $15 \%$ in 2004 and $19 \%$ in 2014.

The percentage of elderly single households increased from 6\% in 1994 to 14\% in both 2004 and 2014.

The Beaches
The percentage of households with children age 0-17 at home increased from $17 \%$ in 1994 to $20 \%$ in 2004 and $30 \%$ in 2014.

The percentage of non-elderly couple households increased from 11\% in 1994 to 14\% in 2004, but then decreased to 8\% in 2014.

The percentage of non-elderly single households increased from 11\% in 1994 to 14\% in 2004 and $16 \%$ in 2014.

The percentage of elderly single households decreased from $28 \%$ in 1994 to $21 \%$ in 2004 and 14\% in 2014.

Household Structure by Jewish Identification. Table 5-53 shows the household structure within each Jewish identification group.

The $45 \%$ of Orthodox households who are households with children compares to $35 \%$ in 2004. The $16 \%$ elderly couple households compares to $17 \%$ in 2004 . The $13 \%$ elderly single households compares to $21 \%$ in 2004.
$21 \%$ of Conservative households are elderly single households, 20\% are elderly couple households and $20 \%$ are households with children. These percentages are virtually unchanged since 2004.

The 24\% of Reform households who are elderly single households compares to $21 \%$ in 2004. The $19 \%$ households with children compares to $21 \%$ in 2004 . The $18 \%$ elderly couple households compares to $18 \%$ in 2004.

The 23\% of Just Jewish households who are households with children compares to 23\% in 2004. The $21 \%$ who are elderly single households compares to $22 \%$ in 2004. The 19\% who are elderly couple households compares to $18 \%$ in 2004.

## Living Arrangements of Children

Tables 5-54 to 5-56 show various living arrangements of children in Jewish households in Miami.

## Children Living in Households with Working Parents

Table 5-54 shows that 36\% (6,390 children) of children age 0-12 in Jewish households live in households in which both parents (or the parent in a single parent household) are employed full time (households with working parents). The percentage of children age 0-12 living in households with working parents helps to determine the need for after school programs.

The percentage of children age 0-12 in Jewish households living in households with working parents is $38 \%$ in North Dade, $44 \%$ in South Dade, and $25 \%$ in The Beaches.

Community Comparisons. Table 5-57 shows that the $36 \%$ living in households with working parents is about average among about 35 comparison Jewish communities and compares to 55\% in Washington, $41 \%$ in Broward, $37 \%$ in West Palm Beach, and 30\% in South Palm Beach. The 36\% compares to 50\% in 2004 and 43\% in 1994.

## Children Living in Single Parent Households

Table 5-55 shows that 8\% (1,872 children) of children age 0-17 in Jewish households live in single parent households. Single parent households are households with one parent and children age 0-17 at home.

The percentage of children age 0-17 in Jewish households living in single parent households is 9\% in North Dade, 5\% in South Dade, and 7\% in The Beaches.

Community Comparisons. Table 5-58 shows that the $8 \%$ living in single parent households is about average among about 35 comparison Jewish communities and compares to 12\% in South Palm Beach, 11\% in Broward, 9\% in Washington, and 8\% in both Atlanta and West Palm Beach. The 8\% compares to $11 \%$ in 2004 and 3\% in 1994. The 8\% compares to $27 \%$ of all American children (both Jewish and non-Jewish) age 0-17 as of 2010.

## Children Living in Households in Which an Adult Is or Has Been Divorced

Table 5-56 shows that 20\% (4,703 children) of children age 0-17 in Jewish households live in households in which an adult is either currently divorced or divorced and remarried. The adult may or may not be the parent of the child.

The percentage of children age 0-17 in Jewish households living in households in which an adult is either currently divorced or divorced and remarried is $21 \%$ in North Dade, $22 \%$ in South Dade, and $13 \%$ in The Beaches.

Community Comparisons. Table $\mathbf{5 - 5 9}$ shows that the $20 \%$ living in households in which an adult is or was divorced is the fifth lowest of about 35 comparison Jewish communities and compares to $36 \%$ in Broward, $33 \%$ in West Palm Beach, 28\% in Washington, and 25\% in South Palm Beach. The 20\% compares to 30\% in 2004 and 25\% in 1994.

## LIVING ARRANGEMENTS OF THE ELDERLY

Table 5-60 shows the percentage of persons age 65 and over and persons age 75 and over in Jewish households in Miami who live alone.

29\% (11,753 persons) of persons age 65 and over in Jewish households live alone. 35\% (7,241 persons) of persons age 75 and over in Jewish households live alone.

The percentage of elderly living alone is related to the need for elderly social services, assisted living, senior housing, and nursing homes as persons living alone are more likely to need assistance from others. See also the "Need for Selected Social Services for Households with Persons Age 75 and Over in the Past Year" and "Caring for Elderly Relatives" sections in Chapter 10.

Community Comparisons. Table 5-61 shows that the $29 \%$ of persons age 65 and over in Jewish households who live alone is about average among about 50 comparison Jewish communities and compares to 35\% in Washington, 31\% in Broward, 30\% in both Cleveland and New York, 26\% in South Palm Beach, 19\% in West Palm Beach, and 18\% in Atlanta. The 29\% compares to $31 \%$ in 2004 and $30 \%$ in 1994. The $29 \%$ compares to $21 \%$ of all residents (both Jewish and non-Jewish) age 65 and over in Miami-Dade County as of 2010 and 27\% of all Americans (both Jewish and non-Jewish) age 65 and over as of 2011.

The 35\% of persons age 75 and over in Jewish households who live alone is about average among about 50 comparison Jewish communities and compares to $45 \%$ in Washington, $40 \%$ in Cleveland, $36 \%$ in New York, 35\% in Broward, 31\% in South Palm Beach, 28\% in Atlanta, and 22\% in West Palm Beach. The 35\% compares to 36\% in 2004 and $37 \%$ in 1994.

## MARITAL STATUS

Table $\mathbf{5 - 6 2}$ shows that $61 \%$ ( 64,057 adults) of adults age 18 and over in Jewish households in Miami are currently married; 18\% (18,816 adults) are single, never married; 8\% (8,562 adults) are currently divorced; 10\% (10,253 adults) are currently widowed; and 1\% (634 adults) are separated. 3\% (3,383 adults) of adults are living with a partner.

The divorce rate © , which is the number of divorced adults per 1,000 married adults, is 134 for adults in Jewish households. 19\% of adults in Jewish households are or have been divorced; $11 \%$ are or have been widowed; $82 \%$ are or have been married; and $12 \%$ are on their second or higher marriage.

Community Comparisons. Comparisons of adults in Jewish households with all residents (both Jewish and non-Jewish) of Miami-Dade County and all Americans (both Jewish and non-Jewish) should be treated as approximate because the US Census data are for persons age 15 and over while the data in the Jewish community studies and NJPS 2000 are for adults age 18 and over.

Table 5-63 shows that the 61\% currently married is below average among about 55 comparison Jewish communities and compares to $74 \%$ in West Palm Beach, 69\% in both Atlanta and South Palm Beach, 65\% in Broward, 63\% in Washington, 60\% in Cleveland, and $52 \%$ in New York. The 61\% compares to $62 \%$ in 2004 and $66 \%$ in 1994. The 61\% compares to $45 \%$ of all residents (both Jewish and non-Jewish) age 15 and over of MiamiDade County as of 2012 and 48\% of all Americans (both Jewish and non-Jewish) age 15 and over as of 2012.

The $18 \%$ single, never married is about average among about 55 comparison Jewish communities and compares to 27\% in Washington, 23\% in New York, 19\% in Atlanta, 16\% in Cleveland, 11\% in Broward, and 7\% in both South Palm Beach and West Palm Beach. The $18 \%$ compares to $17 \%$ in 2004 and $14 \%$ in 1994. The $18 \%$ compares to $39 \%$ of all residents (both Jewish and non-Jewish) age 15 and over of Miami-Dade County as of 2012 and $32 \%$ of all Americans (both Jewish and non-Jewish) age 15 and over as of 2012.

The $8 \%$ currently divorced is about average among about 50 comparison Jewish communities and compares to $12 \%$ in Cleveland, $9 \%$ in New York, $8 \%$ in Atlanta, $6 \%$ in both South Palm Beach and Washington, and 5\% in both West Palm Beach and Broward. The $8 \%$ compares to $8 \%$ in 2004 and $6 \%$ in 1994. The $8 \%$ compares to $10 \%$ of all residents (both Jewish and non-Jewish) age 15 and over of Miami-Dade County as of 2012 and 11\% of all Americans (both Jewish and non-Jewish) age 15 and over as of 2012.

The divorce rate of 134 is above average among about 50 comparison Jewish communities and compares to 200 in Cleveland, 176 in New York, 113 in Atlanta, 88 in Washington, 87 in South Palm Beach, 78 in Broward, and 61 in West Palm Beach. The 134 compares to 124 in 2004 and 93 in 1994. The 134 compares to 224 for all residents (both Jewish and non-Jewish) age 15 and over of Miami-Dade County as of 2012 and 213 for all Americans (both Jewish and non-Jewish) age 15 and over as of 2012.

The $10 \%$ currently widowed is about average among about 50 comparison Jewish communities and compares to $19 \%$ in both South Palm Beach and Broward, 14\% in West Palm Beach, 13\% in New York, 12\% in Cleveland, 5\% in Washington, and 4\% in Atlanta. The $10 \%$ compares to $13 \%$ in both 2004 and 1994. The $10 \%$ compares to $2 \%$ of all residents (both Jewish and non-Jewish) age 15 and over of Miami-Dade County as of 2012 and 7\% of all Americans (both Jewish and non-Jewish) age 15 and over as of 2012.

60\% of Jewish adults in Miami are currently married, compared to 55\% nationally. 18\% of Jewish adults in Miami are single, never married, compared to 25\% nationally. 8\% of Jewish adults in Miami are currently divorced, compared to $9 \%$ nationally. The divorce rate is 140 for Jewish adults in Miami, compared to 158 nationally. 10\% of Jewish adults in Miami are currently widowed, compared to 8\% nationally (Table 5-62 and 5-63).

## Martial Status by Geographic Area

Table 5-64 shows that marital status varies little among North Dade, South Dade, and The Beaches. The only exception to this is that $13 \%$ of adults in Jewish households in North Dade are widowed, compared to $7 \%$ in South Dade and $6 \%$ in The Beaches.

North Dade. Table 5-65 shows marital status by geographic subarea within North Dade. The major differences are that the percentage single, never married is higher in Other North Dade (23\%) than in North Dade Core West (18\%) and North Dade Core East (13\%) and the percentage currently widowed is higher in North Dade Core East (15\%) and North Dade Core West (13\%) than in Other North Dade (4\%).

South Dade. Table 5-66 shows marital status by geographic subarea within South Dade. $72 \%$ of adults in East Kendall are currently married, compared to $61 \%$ of adults in West Kendall and $56 \%$ of adults in NE South Dade. The percentage of adults who are single, never married is higher in NE South Dade (24\%) than in East Kendall (19\%) and West Kendall (17\%).

The Beaches. Table 5-67 shows marital status by geographic subarea within The Beaches. 74\% of adults in North Beach are currently married, compared to 58\% of adults in Middle Beach and 50\% of adults in South Beach. 43\% of adults in South Beach are currently single, compared to 37\% in Middle Beach and 22\% in North Beach. 30\% of adults in South Beach and $21 \%$ of adults in Middle Beach are single, never married, compared to $11 \%$ of adults in North Beach.

## Marital Status by Sex

Table 5-68 shows that 67\% of adult males in Jewish households are currently married, compared to $56 \%$ of adult females. $15 \%$ of adult females are currently widowed, compared to $4 \%$ of adult males. $21 \%$ of adults males are currently single, compared to $41 \%$ of adult females.

## Marital Status by Age

Table 5-69 shows that the percentage of adults in Jewish households who are currently married increases from $27 \%$ of adults under age 35 to $83 \%$ of adults age 35-64. The percentage then decreases to $75 \%$ of adults age $50-64,67 \%$ of adults age $65-74$, and $55 \%$ of adults age 75 and over.

The percentage of adults who are single, never married decreases from $65 \%$ of adults under age 35 to $1 \%-8 \%$ of adults age 35 and over.

The percentage of adults who are currently single decreases from $66 \%$ of adults under age 35 to $14 \%$ of adults age $35-49$ and then increases to $22 \%$ of adults age 50-64, 30\% of adults age 65-74, and $44 \%$ of adults age 75 and over.

The percentage of adults who are divorced and remarried is highest for adults age 50-64 (18\%) and age 65-74 (15\%).

The percentage of adults who are currently widowed is $11 \%$ of adults age 65-74 and 36\% of adults age 75 and over.

The percentage of adults who are or have been married reaches $99 \%$ of adults age 75 and over, illustrating the almost universality of marriage in the Jewish community.

## Marital Status by Age and Sex

Tables 5-70 and 5-71 show marital status by age for adult males and adult females in Jewish households, respectively.

For adults under age 35, $31 \%$ of females are currently married, compared to $22 \%$ of males. For both males and females, over $90 \%$ of adults are or have been married by age 34 .

For adults age 65-74, 79\% of males are currently married, compared to 57\% of females. For adults age 75 and over, $77 \%$ of males are currently married, compared to $39 \%$ of females.

For adults age 65-74, 5\% of males are currently widowed, compared to $17 \%$ of females. For adults age 75 and over, $14 \%$ of males are currently widowed, compared to $52 \%$ of females.

## LEVEL OF SECULAR EDUCATION

Table $5-73$ shows that only $1 \%$ ( 1,158 adults) of adults age 25 and over in Jewish households in Miami do not have a high school degree. 13\% (12,544 adults) of adults age 25 and over in Jewish households have a high school degree or a degree from a technical or trade school and have not attended college. In total, 14\% (13,702 adults) of adults age 25 and over in Jewish households have a high school degree or less and have not attended college.

8\% (7,720 adults) of adults age 25 and over in Jewish households are in college or have attended college without attaining a degree; another $7 \%$ (6,755 adults) have a two-year college degree. $71 \%$ ( 68,319 adults) of adults age 25 and over in Jewish households have a four-year college degree or higher, including 32\% (30,686 adults) with a graduate degree. $2 \%$ (2,316 adults) of adults age 25 and over in Jewish households have a medical degree; $0.3 \%$ (289 adults) have a dental degree; and 6\% (5,790 adults) have a law degree.

Table 5-80 shows that 94\% of adults age 25-34 in Jewish households are in college, attended some college, have a two-year college degree, or have a four-year college degree or higher. This implies that in recent years about 94\% of adults in Jewish households have attended college.

Community Comparisons. Table 5-74 shows that the $14 \%$ with a high school degree or less is about average among about 50 comparison Jewish communities and compares to $41 \%$ in Broward, $28 \%$ in South Palm Beach, $24 \%$ in West Palm Beach, 22\% in New York, 13\% in Cleveland, 8\% in Atlanta, and 7\% in Washington. The 14\% compares to 24\% in 2004 and $31 \%$ in 1994. The $14 \%$ compares to $50 \%$ of all adults (both Jewish and nonJewish) age 25 and over in Miami-Dade County as of 2012 and 42\% of all American adults (both Jewish and non-Jewish) age 25 and over as of 2012.

The $71 \%$ with a four-year college degree or higher is about average among about 50 comparison Jewish communities and compares to $85 \%$ in Washington, $76 \%$ in Atlanta, $66 \%$ in Cleveland, $57 \%$ in New York, $55 \%$ in West Palm Beach, $49 \%$ in South Palm Beach, and $35 \%$ in Broward. The $71 \%$ compares to $60 \%$ in 2004 and $52 \%$ in 1994. The $71 \%$ compares to $26 \%$ of all adults (both Jewish and non-Jewish) age 25 and over in MiamiDade County as of 2012 and 28\% of all American adults (both Jewish and non-Jewish) age 25 and over as of 2012.

The $32 \%$ with a graduate degree is about average among about 50 comparison Jewish communities and compares to 52\% in Washington, 33\% in both Cleveland and New York, and $32 \%$ in Atlanta, $20 \%$ in West Palm Beach, $18 \%$ in South Palm Beach, and 11\% in Broward. The 32\% compares to $26 \%$ in 2004 and $18 \%$ in 1994. The 32\% compares to $10 \%$ of all adults (both Jewish and non-Jewish) age 25 and over in Miami-Dade County as of 2012 and 11\% of all American adults (both Jewish and non-Jewish) age 25 and over as of 2012.
$70 \%$ of Jewish adults age 25 and over in Miami have a four-year college degree or higher, compared to 60\% nationally. 32\% of Jewish adults age 25 and over in Miami have a graduate degree, compared to 28\% nationally (Tables 5-73 and 5-74).

Tables 5-80 to $5-82$ show results for adults age 18-24 in Jewish households for informational purposes only, which are not included in the overall results for adults age 25 and over.

## Level of Secular Education by Geographic Area

Table 5-75 shows that 18\% of adults age 25 and over in Jewish households in North Dade have a high school degree or less, compared to $10 \%$ of adults age 25 and over in South Dade and 9\% of adults age 25 and over in The Beaches.
$79 \%$ of adults age 25 and over in The Beaches and $77 \%$ of adults age 25 and over in South Dade have a four-year college degree or higher, compared to $65 \%$ of adults age 25 and over in North Dade.
$38 \%$ of adults age 25 and over in South Dade and The Beaches have a graduate degree, compared to $27 \%$ of adults age 25 and over in North Dade.

North Dade. Table 5-76 shows the level of secular education by geographic subarea within North Dade. The percentage of adults age 25 and over with a high school degree or less is $23 \%$ in North Dade Core West and 19\% in North Dade Core East, compared to 9\% in Other North Dade.

The percentage of adults age 25 and over with a four-year college degree or higher is $75 \%$ in Other North Dade, compared to $64 \%$ in North Dade Core East and 60\% in North Dade Core West.
$38 \%$ of adults age 25 and over in Other North Dade have a graduate degree, compared to $25 \%$ of adults age 25 and over in North Dade Core East and $23 \%$ in North Dade Core West.

South Dade. Table 5-77 shows the level of secular education by geographic subarea within South Dade. The percentage of adults age 25 and over with a high school degree or less is higher in West Kendall (13\%) than in NE South Dade (7\%) and East Kendall (7\%).
$85 \%$ of adults age 25 and over in East Kendall and $83 \%$ of adults age 25 and over in NE South Dade have a four-year college degree or higher, compared to $70 \%$ of adults age 25 and over in West Kendall.

47\% of adults age 25 and over in East Kendall and NE South Dade have a graduate degree, compared to $29 \%$ of adults age 25 and over in West Kendall.

The Beaches. Table 5-78 shows the level of secular education by geographic subarea within The Beaches. The percentage of adults age 25 and over with a high school degree or less is higher in both North Beach (13\%) and Middle Beach (10\%) than in South Beach (5\%).

85\% of adults age 25 and over in South Beach have a four-year college degree or higher, compared to $78 \%$ of adults age 25 and over in Middle Beach and 73\% of adults age 25 and over in North Beach.

40\% of adults age 25 and over in Middle Beach, $36 \%$ of adults age 25 and over in Middle Beach, and $33 \%$ of adults age 25 and over in North Beach have a graduate degree or higher.

## Level of Secular Education by Sex

Table 5-79 shows that $12 \%$ of males age 25 and over in Jewish households have a high school degree or less, compared to $16 \%$ of females age 25 and over.
$77 \%$ of males age 25 and over have a four-year college degree or higher, compared to $66 \%$ of females age 25 and over.
$37 \%$ of males age 25 and over have a graduate degree, compared to $28 \%$ of females age 25 and over.

## Level of Secular Education by Age

Table 5-80 shows that the percentage of adults in Jewish households with a high school degree or less increases from 7\% of adults age 35-49, 11\% of adults age 50-64, and 14\% of adults age 65-74 to $30 \%$ of adults age 75 and over.

The percentage of adults with a four-year college degree or higher decreases from 83\% of adults age $25-49,76 \%$ of adults age $50-64$, and $70 \%$ of adults age $65-74$ to $46 \%$ of adults age 75 and over.

The percentage of adults with a graduate degree decreases from over $30 \%$ of adults age $25-74$ to $17 \%$ of adults age 75 and over.

## Level of Secular Education by Age and Sex

Tables 5-81 and 5-82 show the level of secular education by age for adult males and adult females in Jewish households, respectively.

Only small differences are seen in the percentage of adults who have a four-year college degree or higher by sex for adults under age 65.

No significant difference is seen in the percentage of adults who have a graduate degree by sex for adults under age 35 .

For adults age 35-49, $41 \%$ of males have a graduate degree, compared to $34 \%$ of females.
For adults age 50-64, 37\% of males have a graduate degree, compared to $35 \%$ of females.
For adults age 65-74, 41\% of males have a graduate degree, compared to $26 \%$ of females.
For adults age 65 and over, $70 \%$ of males have a four-year college degree or higher, compared to $49 \%$ of females.

For adults age 75 and over, 25\% of males have a high school degree or less, compared to $33 \%$ of females.

For adults age 75 and over, $60 \%$ of males have a four-year college degree or higher, compared to $36 \%$ of females.

For adults age 75 and over, $27 \%$ of males have a graduate degree, compared to $11 \%$ of females.

Thus, the traditional pattern that males attain higher levels of secular education than females has changed among younger adults.

## Employment Status

Table $\mathbf{5 - 8 3}$ shows that $44 \% ~(46,933$ adults) of adults in Jewish households in Miami are employed full time; 11\% (11,416 adults) are employed part time; 2\% (1,691 adults) were unemployed at the time of the survey; 29\% (30,654 adults) are retired; 5\% (5,391 adults) are homemakers; 8\% (8,456 adults) are students; $1 \%$ (634 adults) are disabled; and 1\% (529 adults) are full-time volunteers.

Table 5-91 shows that $28 \%$ ( 11,097 adults) of persons age 65 and over in Jewish households are employed, including 17\% full time and 11\% part time.

Two additional employment measures are shown in this section:
(1) The percentage of adults in the labor force is the sum of the percentages of adults who are employed full time, employed part time, and unemployed at the time of the survey. 57\% of adults in Jewish households are in the labor force (Table 5-83).
(2) The unemployment rate is the percentage of adults who were unemployed at the time of the survey divided by the percentage of adults in the labor force. The unemployment rate for adults in Jewish households is 2.8\%.

Community Comparisons. Comparisons of adults in Jewish households with all residents (both Jewish and non-Jewish) of Miami-Dade County and with all Americans (both Jewish and non-Jewish) should be treated as approximate, because the US Census data are for persons age 16 and over, while the data in the Jewish community studies and NJPS 2000 are for adults age 18 and over.

Table 5-84 shows that the 44\% employed full time is about average among about 45 comparison Jewish communities and compares to $62 \%$ in Washington, $52 \%$ in Cleveland, 41\% in New York, 33\% in Broward, 22\% in West Palm Beach, and 18\% in South Palm Beach. The 44\% compares to 40\% in 2004 and 43\% in 1994.

The $11 \%$ employed part time is about average among about 45 comparison Jewish communities and compares to $17 \%$ in Cleveland, $14 \%$ in New York, $11 \%$ in Washington, 8\% in South Palm Beach, 7\% in West Palm Beach, and 6\% in Broward. The 11\% compares to $9 \%$ in both 2004 and 1994.

The 29\% retired is above average among about 55 comparison Jewish communities and compares to 67\% in South Palm Beach, 64\% in West Palm Beach, 51\% in Broward, 25\% in New York, $21 \%$ in Cleveland, $16 \%$ in Atlanta, and $12 \%$ in Washington. The 29\% compares to $34 \%$ in 2004 and $35 \%$ in 1994.

The $57 \%$ in the labor force is below average among about 55 comparison Jewish communities and compares to $74 \%$ in Washington, $71 \%$ in both Cleveland and Atlanta, $60 \%$ in New York, $39 \%$ in Broward, $26 \%$ in South Palm Beach, and 30\% in West Palm Beach. The 57\% compares to 50\% in 2004 and 53\% in 1994. The 57\% compares to $63 \%$
of all residents (both Jewish and non-Jewish) age 16 and over of Miami-Dade County as of 2012 and 64\% of all Americans (both Jewish and non-Jewish) age 16 and over as of 2012.

Note that the data for all residents of Miami-Dade County and all Americans exclude employment in the military.

The $3 \%$ unemployment rate is about average among about 55 comparison Jewish communities and compares to $9 \%$ in New York, $4 \%$ in Atlanta, and $3 \%$ in each of Cleveland, South Palm Beach, West Palm Beach, Washington, and Broward. The 3\% compares to 3\% in 2004 and 2\% in 1994. The 3\% compares to $11 \%$ for all residents (both Jewish and non-Jewish) age 16 and over of Miami-Dade County as of 2012 and 9\% for all Americans (both Jewish and non-Jewish) age 16 and over as of 2012.

Tables 5-83 and 5-84 show that 44\% of Jewish adults in Miami are employed full time, compared to $49 \%$ nationally. 11\% of Jewish adults in Miami are employed part time, compared to 13\% nationally. 30\% of Jewish adults in Miami are retired, compared to 21\% nationally.

Table 5-85 shows that the $28 \%$ of elderly persons who are employed is the eighth highest of about 50 comparison Jewish communities and compares to 29\% in Atlanta, 28\% in Cleveland, $24 \%$ in New York, 22\% in Washington, 9\% in South Palm Beach, and 8\% in both West Palm Beach and Broward. The 28\% compares to $16 \%$ in 2004 and $21 \%$ in 1994. The 28\% compares to 16\% of all Americans (both Jewish and non-Jewish) age 65 and over as of 2007.

The $17 \%$ of elderly persons who are employed full time is the fifth highest of about 40 comparison Jewish communities and compares to $17 \%$ in New York, 15\% in Cleveland, 12\% in Washington, 4\% in South Palm Beach, and 3\% in both West Palm Beach and Broward. The 17\% compares to 9\% in 2004 and 14\% in 1994.

The $11 \%$ of elderly persons who are employed part time is about average among about 40 comparison Jewish communities and compares to $13 \%$ in Cleveland, $9 \%$ in Washington, 7\% in New York, 6\% in South Palm Beach, 5\% in West Palm Beach, and 4\% in Broward. The 11\% compares to 8\% in 2004 and 7\% in 1994.

## Employment Status by Geographic Area

Table 5-86 shows that the percentage of adults in Jewish households employed full time is higher in The Beaches (50\%) and South Dade (49\%) than in North Dade (40\%). 35\% of adults in North Dade are retired, compared to 24\% of adults in South Dade and 19\% of adults in The Beaches.

North Dade. Table 5-87 shows employment status by geographic subarea within North Dade. The percentage of adults employed full time is higher in Other North Dade (57\%) than in North Dade Core West (39\%) and North Dade Core East (35\%). 39\% of adults in North Dade Core East and 33\% of adults in North Dade Core West are retired, compared to $23 \%$ of adults in Other North Dade.

South Dade. Table 5-88 shows employment status by geographic subarea within South Dade. The percentage of adults employed full time is higher in NE South Dade (57\%) and East Kendall (54\%) than in West Kendall (42\%). 32\% of adults in West Kendall are retired, compared to $17 \%$ of adults in NE South Dade and $12 \%$ of adults in East Kendall.

The Beaches. Table 5-89 shows employment status by geographic subarea within The Beaches. The percentage of adults employed full time is higher in South Beach (62\%) than in North Beach ( $47 \%$ ) and Middle Beach ( $46 \%$ ). $24 \%$ of adults in North Beach are retired, compared to $18 \%$ of adults in Middle Beach and 16\% of adults in South Beach.

## Employment Status by Sex

Table 5-90 shows that, as expected, adult males in Jewish households (56\%) are more likely to be employed full time than are adult females (35\%). 32\% of adult females and 25\% of adult males are retired. 9\% of adult females are homemakers.

## Employment Status by Age

Table 5-91 shows that the percentage of adults in Jewish households employed full time is $49 \%$ of adults under age $35,73 \%$ of adults age $35-49$, $64 \%$ of adults age $50-64,31 \%$ of adults age 65-74, and 4\% of adults age 75 and over.

52\% of adults age 65-74 and 85\% of adults age 75 and over are retired. 12\% of adults age 50-64 are retired. $36 \%$ of adults under age 35 are students.

## Employment Status by Age and Sex

Tables 5-92 and 5-93 show employment status by age for adult males and adult females in Jewish households, respectively.

For adults in each age group, males are more likely to be employed full time than are females. The percentage of adults who are employed full time is highest for males age $35-49$ ( $91 \%$ ). Only $55 \%$ of females age 35-49 are employed full time. For adults age 35-49, $4 \%$ of males are employed part time, compared to $17 \%$ of females. $22 \%$ of females age $35-49$ are homemakers, compared to $10 \%$ of females age 50-64.
$58 \%$ of males age 65-74 and $16 \%$ of males age 75 and over are in the labor force, compared to $40 \%$ and $10 \%$ in 2004.

## Housing Value

Respondents in Jewish households in Miami who own their homes were asked to estimate the value of their homes using the categories under $\$ 250,000$ or over $\$ 250,000$. Housing values are based upon respondents' perceptions and may not represent actual selling prices. Some respondents have a reasonable idea of the selling prices of similar homes in their neighborhoods. Some respondents may remember what they paid for their homes, but are unaware of changes in the housing market. Table 5-95 shows that $92 \%$ of respondents in homeowner households answered this question. The type of bias introduced by the lack of a response from $8 \%$ of respondents is unknown.

Not all 8\% of respondents refused to answer this question. In some cases, particularly when an adult child was interviewed, the respondent simply did not know the housing value. By ignoring the non-responses, the assumption is made that the distribution of housing values for those respondents who were unwilling or unable to respond would be the same as the distribution for those respondents who responded.

Community Comparisons. Table 5-95 shows that the $92 \%$ housing value cooperation rate is about average among about 30 comparison Jewish communities and compares to 92\% in Broward, 90\% in Washington, and 87\% in both South Palm Beach and West Palm Beach. The 92\% compares to 86\% in 2004 and 80\% in 1994.

Comparisons Among Population Subgroups. Table 5-94 shows that, overall, 27\% of homeowners value their house under $\$ 250,000.00$. The percentage is much higher for:

- North Dade Core West (54\%)
- Holocaust survivor households (44\%)
- households living in townhouses (56\%)
- households age 75 and over ( $40 \%$ )
- elderly single households (51\%)
- households earning an annual income under \$25,000 (73\%) and \$25-\$50,000 (65\%)

The percentage is much lower for:

- part-year households (10\%)
- households in East Kendall (4\%), NE South Dade (12\%), Middle Beach (15\%), North Beach (8\%), and South Beach (8\%)
- Hispanic households (14\%)
- households living in single family homes (14\%)
- households in residence in Miami for 0-4 years (7\%) and for 5-9 years (13\%)
- households under age 35 (9\%)
- households with children (12\%) and non-elderly couple households (15\%)
- households earning an annual income of \$100,000-\$200,000 (12\%) and \$200,000 and over (2\%)
- synagogue member households (17\%)

| Median Housing Value |
| :--- |
| In a question asked in the 2004 study about housing value, the categories facilitated |
| calculating a median housing value. These categories were not repeated in this study |
| and no median value could be calculated. In 2004, the median housing value of Miami |
| was $\$ 420,000$ (adjusted for inflation to 2012 dollars). |
| For comparisons of these statistics with other communities, see Section 9 of Ira M. |
| Sheskin. ComparisonsofJewish Communities: A Compendium of Tables and BarCharts |
| (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish |
| Federations of North America, 2012) at www.jewishdatabank.org, |

## Household Income

Respondents in Jewish households in Miami were asked their household income before taxes in 2013 using the categories shown in Table 5-96. Table 5-97 shows that $79 \%$ of respondents answered this question. The type of bias introduced by the lack of a response from $21 \%$ of respondents is unknown.

Not all $21 \%$ of respondents refused to answer this question. In some cases, particularly when an adult child was interviewed, the respondent simply did not know the household income. By ignoring the non-responses, the assumption is made that the distribution of household income for those respondents who were unwilling or unable to respond would be the same as the distribution for those respondents who responded.

Although $12 \%$ of respondents were unwilling or unable to report their household income using the detailed categories shown in Table 5-96, they did report whether their household income was under or over \$100,000. 46\% of these respondents reported that their household income was $\$ 100,000$ and over, compared to the $46 \%$ of respondents who reported their household income was $\$ 100,000$ and over using the detailed categories. This is an indication that had we obtained answers from all respondents, the percentages of household income reported in this section would be not be significantly different. The subsequent analysis in this section excludes the responses of those respondents who did not report their household income using the detailed categories.

Table 5-96 shows that 5\% of households earn an annual income under \$15,000; 9\%, \$15,000-\$25,000; 17\%, \$25,000-\$50,000; 13\%, \$50,000-\$75,000; 10\%, \$75,000\$100,000; 18\%, \$100,000-\$150,000; 9\%, \$150,000-\$200,000; and 20\%, \$200,000 and over.

The median household income is $\$ 90,600$, which means that half of households earn an annual income under \$90,600 and half earn over \$90,600.

Community Comparisons. Table 5-97 shows that the $79 \%$ household income cooperation rate is about average among about 55 comparison Jewish communities and compares to 83\% in Atlanta, 82\% in Cleveland, 78\% in both New York and Washington, 67\% in Broward, and 66\% in both South Palm Beach and West Palm Beach. The 79\% compares to $66 \%$ in 2004 and $68 \%$ in 1994.

The community comparisons of median household income should be treated with caution because, although the data are adjusted for inflation to 2013 dollars, cost of living variations exist from community to community.

Table 5-98 shows that the $\$ 91,000$ median household income is about average among about 55 comparison Jewish communities and compares to $\$ 124,000$ in Washington, \$100,000 in Atlanta, \$86,000 in West Palm Beach, \$73,000 in both Cleveland and South Palm Beach, \$69,000 in New York, and \$59,000 in Broward. The \$91,000 compares to $\$ 81,000$ in 2004 and $\$ 74,000$ in 1994. The $\$ 91,000$ compares to $\$ 64,000$ nationally,
$\$ 43,464$ for all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and \$54,000 for all American households (both Jewish and non-Jewish) as of 2012.

Table 5-99 shows that the $\$ 133,000$ median household income of households with children is above average among about 50 comparison Jewish communities and compares to $\$ 171,000$ in Washington, $\$ 146,000$ in South Palm Beach, $\$ 116,000$ in both Atlanta and West Palm Beach, \$97,000 in Broward, \$92,000 in Cleveland, and \$91,000 in New York. The \$133,000 compares to \$124,000 in 2004 and \$113,000 in 1994.

Table 5-100 shows that the $\$ 65,000$ median household income of elderly households is above average among about 55 comparison Jewish communities and compares to $\$ 78,000$ in Washington, $\$ 75,000$ in West Palm Beach, $\$ 58,000$ in South Palm Beach, $\$ 52,000$ in both Cleveland and Atlanta, \$50,000 in New York, and \$36,000 in Broward. The $\$ 65,000$ compares to $\$ 47,000$ in 2004 and $\$ 40,000$ in 1994.

Household Income by Income Category. Table 5-101 shows that the 14\% earning an annual household income under $\mathbf{\$ 2 5 , 0 0 0}$ is about average among about 35 comparison Jewish communities that have completed studies since 2000 and compares to $19 \%$ in South Palm Beach, 16\% in Cleveland, 13\% in West Palm Beach, and 6\% in Washington. The $14 \%$ compares to $22 \%$ in 2004. The $14 \%$ compares to $22 \%$ nationally, $30 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 23\% of all American households (both Jewish and non-Jewish) as of 2012.

The 46\% earning an annual household income of \$100,000 and over is the seventh highest of about 30 comparison Jewish communities that have completed studies since 2000 and compares to 47\% in Washington, 37\% in Atlanta, 31\% in Cleveland, 30\% in New York, 28\% in West Palm Beach, and 25\% in South Palm Beach. The 46\% compares to $31 \%$ in 2004. The $46 \%$ compares to $21 \%$ nationally, $18 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012, and 22\% of all American households (both Jewish and non-Jewish) as of 2012.

The $20 \%$ earning an annual household income of $\$ 200,000$ and over is the second highest of about 25 comparison Jewish communities that have completed studies since 2000 and compares to $12 \%$ in Washington, and $9 \%$ in both South Palm Beach and West Palm Beach. The $20 \%$ compares to $12 \%$ in 2004 . The $20 \%$ compares to $4 \%$ of all households (both Jewish and non-Jewish) in Miami-Dade County as of 2012 and 5\% of all American households (both Jewish and non-Jewish) as of 2012.

## Household Income by Months in Residence

Table 5-96 shows that the median household income of Jewish households is \$143,000 for part-year households, compared to $\$ 88,600$ for full-year households.

9\% of part-year households earn an annual income under \$25,000, compared to $14 \%$ of full-year households. 66\% of part-year households earn an annual income of \$100,000 and over, compared to $45 \%$ of full-year households. $41 \%$ of part-year households earn an annual income of $\$ 200,000$ and over, compared to $19 \%$ of full-year households.

## Household Income by Geographic Area

Table 5-102 shows that the median household income of Jewish households is higher in South Dade ( $\$ 112,200$ ) and The Beaches ( $\$ 111,200$ ) than in North Dade ( $\$ 74,600$ ). $56 \%$ of households in South Dade and 54\% of households in The Beaches earn \$100,000 and over, compared to $38 \%$ of households in North Dade.

North Dade. Table 5-103 shows household income by geographic subarea within North Dade. The median household income is higher in Other North Dade ( $\$ 94,000$ ) and in North Dade Core East $(\$ 83,400)$ than in North Dade Core West $(\$ 48,900) .49 \%$ of households in Other North Dade and 42\% of households in North Dade Core East earn \$100,000 and over, compared to $25 \%$ of households in North Dade Core East.

South Dade. Table 5-104 shows household income by geographic subarea within South Dade. The median household income is higher in East Kendall $(\$ 175,000)$ than in NE South Dade ( $\$ 130,100$ ) and West Kendall ( $\$ 81,100$ ). $74 \%$ of households in East Kendall and $63 \%$ of households in NE South Dade earn an annual income of $\$ 100,000$ and over, compared to $44 \%$ of households in West Kendall.

42\% of households in East Kendall and 42\% of households in NE South Dade earned an annual income of $\$ 200,000$ and over, compared to $11 \%$ of households in West Kendall.

The Beaches. Table 5-105 shows household income by geographic subarea within The Beaches. The median household income is higher in North Beach $(\$ 131,900)$ than in South Beach ( $\$ 108,900$ ) and Middle Beach ( $\$ 104,100$ ). 60\% of households in North Beach, $54 \%$ of households in South Beach, and $51 \%$ of households in Middle Beach earn an annual income of $\$ 100,000$ and over.

## Household Income by Population Groups

Table 5-106 shows that the median household income of Jewish households is higher for Sephardic households (\$105,000), Israeli households (\$98,400), and Hispanic households $(\$ 94,000)$ than for FSU households $(\$ 65,200)$ and Holocaust survivor households $(\$ 35,400)$.

The percentage of households earning under $\$ 25,000$ is much higher for Holocaust survivor households (48\%) and FSU households (27\%) than all households (14\%).

## Household Income by Length of Residence

Table 5-107 shows that the median household income of Jewish households shows no consistent relationship with length of residence in Miami.

## Household Income by Home Ownership

Table 5-108 shows that, as expected, the median household income of Jewish households is much higher for households who own their homes $(\$ 99,200)$ than for households who rent ( $\$ 65,100$ ). $50 \%$ of households who own their homes earn $\$ 100,000$ and over, compared to $34 \%$ of households who rent.

## Household Income by Type of Housing

Table $5-108$ shows that, as expected, the median household income of Jewish households is much higher for households who live in single family homes $(\$ 124,200)$ than for households who live in high rise buildings ( $\$ 73,200$ ) and townhouses ( $\$ 49,100$ ). $61 \%$ of households who live in single family homes earn $\$ 100,000$ and over, compared to $38 \%$ of households who live in high rise buildings, and $27 \%$ of households who live in townhouses.

## Household Income by Age of Head of Household

Table 5-109 shows that household income peaks for households age 35-49 (\$134,400).
The median household income is $\$ 65,000$ for households age 65 and over. The median household income of households age 75 and over ( $\$ 49,200$ ) is $\$ 27,500$ less than that of households age 65-74.

The percentage of households who earn $\$ 100,000$ and over is highest for households age $35-49$ ( $62 \%$ ) and lowest for households age 75 and over (27\%).

## Household Income by Household Structure

Table $5-110$ shows that the median household income of Jewish households is higher for non-elderly couple households ( $\$ 142,400$ ) and households with children $(\$ 132,700)$ than for households with only adult children $(\$ 113,900)$ and elderly couple households ( $\$ 111,800$ ). The median household income is much lower for non-elderly single households ( $\$ 60,700$ ) and elderly single households ( $\$ 42,600$ ).
$68 \%$ of non-elderly couple households, $62 \%$ of households with children, $56 \%$ of households with only adult children, and $55 \%$ of elderly couple households earn $\$ 100,000$ and over, compared to $31 \%$ of non-elderly single households and $20 \%$ of elderly single households.

## Household Income by Jewish Identification

Table $\mathbf{5 - 1 1 1}$ shows that the median household income of Jewish households is higher for Reform Jews $(\$ 111,900)$ than for Conservative Jews $(\$ 85,100)$ and the Just Jewish $(\$ 84,700)$. Orthodox Jews $(\$ 73,300)$ have the lowest median income.
$55 \%$ of Reform households earn $\$ 100,000$ and over, compared to $43 \%$ of both Conservative and Just Jewish households and 39\% of Orthodox households.

## Household Income by Membership

Table 5-112 shows that the median household income of Jewish households is much higher for synagogue member households $(\$ 134,100)$ than for synagogue non-member households $(\$ 71,600)$. The difference for Chabad is only about $\$ 10,000$.

The median household income is much higher for JCC member households $(\$ 123,600)$ than for JCC non-member households $(\$ 86,000)$. The median household income is higher for Jewish organization member households $(\$ 114,800)$ than for Jewish organization non-member households $(\$ 82,800)$.
$62 \%$ of synagogue member households earn \$100,000 and over, compared to $37 \%$ of nonsynagogue member households. Little difference exists for Chabad.
$59 \%$ of JCC member households earn \$100,000 and over, compared to 44\% of JCC nonmember households. 56\% of Jewish organization member households earn \$100,000 and over, compared to $43 \%$ of Jewish organization non-member households.

## Low Income Households

$\square$ewish households in Miami who reported a household income under $\$ 25,000$ before taxes in 2013 are considered to be low income households. Table 5-96 shows that $14 \%$ ( 7,742 households) of households are low income households. The sample size for the following data is 179 .

* 3\% are part-year households.
* 68\% of low income households live in North Dade, 20\% live in South Dade, and 13\% live in The Beaches.
* $69 \%$ of low income households own their home.
* $6 \%$ are FSU households, $7 \%$ are Hispanic households, $12 \%$ are Sephardic households, $10 \%$ are Israeli households, and 8\% are Holocaust survivor households.
* $11 \%$ of low income households are under age $35,4 \%$ are age $35-49,20 \%$ are age $50-64,24 \%$ are age $65-74$, and $41 \%$ are age 75 and over. In total, $65 \%$ are age 65 and over.
* 47\% of low income households are elderly single households, 16\% are non-elderly single households, $14 \%$ are elderly couple households, $5 \%$ are households with only adult children, $5 \%$ are households with children, $3 \%$ are non-elderly couple households, and $10 \%$ are other household structures.
* $53 \%$ live in high rise buildings, $24 \%$ in single family homes, and $22 \%$ in townhouses.
* 38\% of Jewish respondents in low income households identify as Just Jewish, 26\% identify as Reform, 26 \% identify as Conservative, and 10\% identify as Orthodox.
* 76\% of married couples in low income households are in-married, 9\% are conversionary in-married, and $15 \%$ are intermarried.
* 20\% of low income households are synagogue members; 27\% attended Chabad in the past year; $6 \%$ are JCC members; and $15 \%$ are Jewish organization members.
* $17 \%$ of low income households contain an adult who visited Israel on a Jewish trip; 37\%, on a general trip; and $46 \%$ contain no adult who visited Israel.
* 19\% of low income households donated to the Jewish Federation in the past year, 23\% were asked but did not donate, and $59 \%$ were not asked to donate.
* $82 \%$ of low income households did not donate to the Jewish Federation in the past year, $15 \%$ donated under \$100, and 3\% donated \$100 and over.

## Households Living Below The Poverty Levels

Respondents in Jewish households in Miami who reported a relatively low household income before taxes in 2013 were asked additional income questions to determine if their households had income below the Federal poverty levels for 2012. These levels depend upon the number of persons in the household.

| Poverty Levels |  |
| :---: | :---: |
| Household Size | 2012 Federal <br> Poverty Level |
| 1 | $\$ 11,500$ |
| 2 | $\$ 15,000$ |
| 3 | $\$ 19,500$ |
| 4 | $\$ 23,500$ |
| 5 | $\$ 27,500$ |

Each household who reported an annual income below the poverty levels was analyzed to determine if the reported low income was indicative of a household living below the poverty levels within the context of the other responses for the household. For example, if a household reported an annual income below $\$ 11,500$, but the respondent was a 21-year old student living alone off campus, the low income probably would not indicate a household living below the poverty levels and the household would not be reported as such.

Table 5-113 shows that 2.0\% (1,114 households) of households reported a household income that was below the Federal poverty levels.
$\checkmark 1.9 \%$ (2,464 persons) of persons in Jewish households live below the Federal poverty levels.

Table 5-114 shows that 2.9\% (759 households) of households with elderly persons reported a household income that was below the Federal poverty levels.
$\boldsymbol{\checkmark} 3.0 \%$ (1,192 persons) of persons age 65 and over in Jewish households live below the Federal poverty levels.
$\boldsymbol{\sim} 2.0 \%$ of FSU households, $1.0 \%$ of Hispanic households, $1.6 \%$ of Sephardic households, and $2.5 \%$ of Israeli households live below the Federal poverty levels.

Community Comparisons. Table $\mathbf{5 - 1 1 3}$ shows that the $2.0 \%$ of households with incomes below the Federal poverty levels is about average among about 25 comparison Jewish communities and compares to $10.9 \%$ in New York, 1.5\% in South Palm Beach, $1.0 \%$ in West Palm Beach, and $0.4 \%$ in Washington. The $2.0 \%$ compares to $3.5 \%$ in 2004. The $2.0 \%$ compares to $5.0 \%$ nationally.

The 1.9\% of persons in Jewish households who live below the Federal poverty levels compares to $19 \%$ of all residents (both Jewish and non-Jewish) of Miami-Dade County as of 2012 and 14.9\% of all Americans (both Jewish and non-Jewish) as of 2012.

Table 5-114 shows that the $2.9 \%$ of households with elderly persons with income below the Federal poverty levels is about average among about 25 comparison Jewish communities and compares to $13.6 \%$ in New York, $1.8 \%$ in South Palm Beach, 1.0\% in West Palm Beach, and $0.5 \%$ in Washington. The $2.9 \%$ compares to $4.5 \%$ in 2004. The 2.9\% compares to $9.0 \%$ nationally.

The $3.0 \%$ of persons age 65 and over in Jewish households who live below the Federal poverty levels compares to $21.7 \%$ of all residents (both Jewish and non-Jewish) age 65 and over of Miami-Dade County as of 2012 and 9.4\% of all Americans (both Jewish and non-Jewish) age 65 and over as of 2012.

## Household Financial Situation

Respondents in Jewish households in Miami were asked about their household's financial situation. Table 5-115 shows that 3\% cannot make ends meet, $26 \%$ are just managing to make ends meet, $36 \%$ have enough money, $20 \%$ have some extra money, and $15 \%$ are well off.

In general, the results reflect the relationships seen in the income data discussed above.

## Comparisons Among Population Subgroups.

## Cannot Make Ends Meet

In total, 3\% of households cannot make ends meet. The percentage is much higher for:

- FSU households (13\%)
- Holocaust survivor households (12\%)
- households earning an annual income under \$25,000 (14\%)

> Well-Off

Table 5-115 shows that, overall, $15 \%$ of households are well off. The percentage is much higher for:

- part-year households (33\%)
- households in East Kendall (25\%)
- households earning \$200,000 and over (47\%)

The percentage is much lower for:

- households earning under \$25,000 (0\%), \$25,000-\$50,000 (1\%), and \$50,000\$100,000 (5\%)

## Changes in Household Financial Situation in the Past Five Years

Respondents in Jewish households in Miami were asked about how their financial situation had changed over the past five years. The purpose of this question was to assess the extent to which the community had recovered from the economic downturn that began in 2008. Table 5-116 shows that 28\% of respondents indicated that their financial situation had improved, $45 \%$ indicated it remained about the same, and $27 \%$ indicated it had gotten worse.

## Comparisons Among Population Subgroups.

## Improved

Table 5-116 shows that, overall, $28 \%$ of respondents indicated their financial situation had improved. The percentage is much higher for:

- households in NE South Dade (44\%) and South Beach (51\%)
- households in residence in Miami for 0-4 years (41\%) and 5-9 years (47\%)
- households who rent (44\%)
- households under age 35 (61\%) and age 35-49 (43\%)
- households with children (42\%) and non-elderly single households (39\%)
- households earning \$100,000-\$200,000 (42\%) and \$200,000 and over (47\%)

The percentage is much lower for:

- FSU households (14\%)
- Holocaust survivor households (4\%)
- households age 75 and over (12\%) and age 65 and over (16\%)
- elderly single households (13\%)
- households earning under \$25,000 (10\%)

## Gotten Worse

Overall, $27 \%$ of respondents indicated their financial situation had gotten worse. The percentage is much higher for:

- Holocaust survivor households (38\%)
- households in North Dade Core West (39\%)
- households living in townhouses (37\%)
- elderly single households (37\%)
- households earning under \$25,000 (51\%) and \$25,000-\$50,000 (37\%)

The percentage is much lower for:

- households in North Beach (12\%) and South Beach (16\%)
- households in residence for 0-4 years (15\%) and 5-9 years (14\%)
- households under age 35 (10\%)
- households earning \$100,000-\$200,000 (12\%) and \$200,000 and over (12\%)

## JEWISH IDENTIFICATION

Јewish respondents in Miami were asked whether they considered themselves to be Orthodox, Conservative, Reconstructionist, Reform, or Just Jewish. Jewish identification is a self-identification and is not necessarily based on (nor consistent with) synagogue membership, ideology, or religious practice. In fact, discrepancies between Jewish identification and practice are sometimes evident. For example, respondents may identify as Orthodox or Conservative, but report that they do not keep kosher. Respondents may identify as Reform, but report that they never attend synagogue services. Table 6-1 shows that $11 \%$ ( 5,849 households) of respondents identify as Orthodox; 26\% (14,371 households), Conservative; 1\% (390 households), Reconstructionist; 31\% (16,989 households), Reform; and 33\% (18,103 households), Just Jewish.
$\boldsymbol{\checkmark}$ Included in Conservative are 1.3\% (724 households) of respondents who volunteered that they identify as Traditional.
$\checkmark$ Of the 5,849 households in which the respondent identifies as Orthodox, respondents in $57 \%$ (3,357 households) of households reported that they keep kosher in and out of the home as well as refrain from the use of electricity on the Sabbath.
$\checkmark$ Of the Jewish children, $31 \%$ are being raised in households in which the respondent identifies as Orthodox; 23\%, Conservative; 20\%, Reform; and 25\%, Just Jewish.

Table 6-1 shows that 15\% of persons in Jewish households live in households in which the respondent identifies as Orthodox; 25\%, Conservative; 1\%, Reconstructionist; 28\%, Reform; and 31\%, Just Jewish. These percentages differ from the percentages reported above for respondents/households only due to differences in average household size among the Jewish identification groups.

Assuming that all Jewish persons in a household identify the same way as the respondent (for example, all Jewish persons in households in which the respondent identifies as Orthodox identify as Orthodox), then $16 \%$ (19,495 persons) of Jewish persons identify as Orthodox; 26\% (32,226 persons), Conservative; 1\% (808 persons), Reconstructionist; 27\% (32,978 persons), Reform; and 30\% (36,665 persons), Just Jewish. Note, however, that it is not necessarily true that all Jewish persons in a household identify the same way as the respondent. For example, we may have interviewed a respondent who identifies as Reform, whereas had we interviewed the spouse or another household member, the Jewish identification might have been Conservative or Just Jewish.

The number of Orthodox Jews increased from 13,800 in 2004 to 19,500 in 2014 (42\%). The number of Conservative Jews decreased from 38,000 in 2004 to 32,300 in 2014 (15\%). The number of Reform Jews increased from 29,700 in 2004 to 33,000 in 2014 (11\%). The number of Just Jewish increased from 29,600 in 2004 to 36,700 in 2014 (24\%).

The remainder of this section discusses Jewish identification in terms of the percentage of households, not persons.

Note that for simplicity the other chapters of this report generally refer to Orthodox, Conservative, Reform, and Just Jewish households, although technically all such references should read households in which the respondent identifies as Orthodox, Conservative, Reform, or Just Jewish.

Community Comparisons. Tables 6-8 to 6-12 compare Jewish identification in Miami with about 55 comparison Jewish communities. Table 6-8 shows the percentage Orthodox, Conservative, Reconstructionist, Reform, and Just Jewish, and the communities are ordered by the Just Jewish column. Tables 6-9 to 6-12 show the results separately for each Jewish identification group.

Table 6-9 shows that the 11\% Orthodox is the fourth highest of about 55 comparison Jewish communities and compares to $20 \%$ in New York, $10 \%$ in both Cleveland and Atlanta, 4\% in both South Palm Beach and Broward, and 2\% in both West Palm Beach and Washington. The $11 \%$ compares to $9 \%$ in both 2004 and 1994 . The $11 \%$ compares to $8 \%$ nationally.

Table 6-10 shows that the $26 \%$ Conservative is about average among about 55 comparison Jewish communities and compares to $37 \%$ in Broward, $35 \%$ in South Palm Beach, $32 \%$ in West Palm Beach, $30 \%$ in Washington, $27 \%$ in Atlanta, 25\% in Cleveland, and $19 \%$ in New York. The $26 \%$ compares to $32 \%$ in 2004 and $34 \%$ in 1994. The $26 \%$ compares to $25 \%$ nationally.

Table 6-11 shows that the 31\% Reform is below average among about 55 comparison Jewish communities and compares to $46 \%$ in Cleveland, $45 \%$ in Atlanta, $37 \%$ in West Palm Beach, 34\% in South Palm Beach, 31\% in Washington, 24\% in Broward, and 23\% in New York. The 31\% compares to $27 \%$ in 2004 and $26 \%$ in 1994. The $31 \%$ compares to $35 \%$ nationally.

Table 6-12 shows that the $33 \%$ Just Jewish is about average among about 55 comparison Jewish communities and compares to $37 \%$ in New York, $34 \%$ in both Washington and Broward, 29\% in West Palm Beach, 26\% in South Palm Beach, 18\% in Atlanta, and $16 \%$ in Cleveland. The $33 \%$ compares to $31 \%$ in 2004 and $32 \%$ in 1994. The $33 \%$ compares to $30 \%$ nationally.

## Comparisons Among Population Subgroups.

## Orthodox

Table 6-2 shows that, overall, $11 \%$ of respondents identify as Orthodox. The percentage is much higher for respondents in:

- part-year households (20\%)
- households in North Dade Core West (24\%), North Beach (34\%), and Middle Beach (22\%)
- Sephardic households (23\%), Israeli households (21\%), and Holocaust survivor households (20\%)
- households in residence in Miami for 5-9 years (22\%)
- households with children (20\%)
- synagogue member households (24\%)
- households who attended Chabad in the past year (25\%)
- JCC member households (21\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (37\%)

The percentage is much lower for respondents in:

- households in Other North Dade (3\%) and West Kendall (1\%)
- intermarried households (1\%)
- synagogue non-member households (3\%)
- households in which no adult visited Israel (2\%)

## Conservative

Table $\mathbf{6 - 2}$ shows that, overall, $26 \%$ of respondents identify as Conservative. The percentage is much higher for respondents in:

- Hispanic households (37\%) and Holocaust survivor households (39\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (37\%)

The percentage is much lower for respondents in:

- FSU households (9\%)
- intermarried households (10\%)

## Reform

Table $\mathbf{6 - 2}$ shows that, overall, $31 \%$ of respondents identify as Reform. The percentage is much higher for respondents in:

- households in East Kendall (49\%), West Kendall (43\%), and NE South Dade (41\%)
- non-elderly couple households (41\%)
- conversionary in-married households (42\%)
- households in which no adult visited Israel (41\%)

The percentage is much lower for respondents in:

- households in North Dade Core West (15\%) and North Beach (18\%)
- FSU households (16\%), Hispanic households (19\%), Sephardic households (19\%), Israeli households (7\%), and Holocaust survivor households (12\%)
- households in residence in Miami for 10-19 years (19\%)
- households who attended Chabad in the past year (19\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (9\%)
- households in which an adult visited Israel on a general trip (19\%)

## Just Jewish

Table 6-2 shows that, overall, $33 \%$ of respondents identify as Just Jewish. The percentage is much higher for respondents in:

- FSU households (70\%) and Israeli households (48\%)
- intermarried households (49\%)
- synagogue non-member households (43\%)

The percentage is much lower for respondents in:

- part-year households (23\%)
- synagogue member households (13\%), households who attended Chabad in the past year (23\%), JCC member households (21\%), and Jewish organization member households (22\%)
- households who donated under \$100 (22\%) and \$500 and over (19\%) to the Jewish Federation in the past year

Note that for simplicity the other chapters of this report generally refer to Orthodox, Conservative, Reform, and Just Jewish households, although technically all such references should read households in which the respondent identifies as Orthodox, Conservative, Reform, or Just Jewish.

Note that $1.5 \%$ of respondents were not Jewish. In almost all of these cases, the respondent was the non-Jewish spouse, partner, or significant other of a Jewish adult. In these cases, the question reported on in this section was asked of the non-Jewish respondent on behalf of the Jewish household member (in a "proxy" fashion).

Non-Jewish household members were generally interviewed when the Jewish household member would not cooperate with our survey, but the non-Jewish household member would, or when the Jewish household member was unavailable.

Geographic Distribution of Jewish Identification Groups. As an example of the interpretation of Table 6-3, note that while Table 6-2 shows that 29\% of respondents who live in North Dade identify as Conservative, Table 6-3 shows that 62\% of respondents who identify as Conservative live in North Dade. Tables 6-4 to 6-6 are comparable in interpretation to Table 6-3 within each of the geographic areas.

Table 6-3 shows that 31\% of respondents who identify as Orthodox live in The Beaches, compared to $11 \%-15 \%$ of respondents in the other Jewish identification groups. $7 \%$ of respondents who identify as Orthodox and $44 \%$ of respondents who identify as Reform live in South Dade, compared to $27 \%-28 \%$ of respondents in the other Jewish identification groups. 44\% of respondents who identify as Reform live in North Dade, compared to 57\%$62 \%$ of respondents in the other Jewish identification groups.

Table 6-4 shows that, of the 62\% of respondents in North Dade who identify as Orthodox, $48 \%$ live in North Dade Core East and $48 \%$ live in North Dade Core West. Of the $44 \%$ of respondents in North Dade who identify as Reform, 25\% live in Other North Dade and only $15 \%$ live in North Dade Core West.

Table 6-6 shows that, of the respondents in The Beaches who identify as Orthodox, 50\% live in Middle Beach, $36 \%$ live in North Beach, and only $14 \%$ live in South Beach.

Age Distribution of Jewish Identification Groups. As an example of the interpretation of Table 6-7, note that while Table 6-2 shows that $25 \%$ of respondents under age 35 identify as Conservative, Table 6-7 shows that $21 \%$ of respondents who identify as Orthodox are under age 35, compared to $12 \%-13 \%$ of respondents in the other Jewish identification groups; $25 \%$ of Orthodox respondents are age 35-49, compared to 14\%-17\% of respondents in the other Jewish identification groups; and 34\% of Orthodox respondents are age 65 and over, compared to $46 \%-50 \%$ of respondents in the other Jewish identification groups.

## IMPORTANCE OF BEING JEWISH

Table 6-13 shows that 74\% of Jewish respondents in Jewish households in Miami feel that being Jewish is very important in their lives, 20\%, somewhat important; 4\% not too important; and 2\%, not at all important.

Community Comparisons. Table $\mathbf{6 - 1 4}$ shows that the $74 \%$ who feel that being Jewish is very important is the fourth highest of about 20 comparison Jewish communities and compares to $75 \%$ in Cleveland, $57 \%$ in New York, and 56\% in Atlanta. The 74\% compares to $52 \%$ nationally and $46 \%$ in the Pew study.

Comparisons Among Population Subgroups. Table 6-13 shows that, overall, 74\% of respondents feel that being Jewish is very important in their lives. The percentage is much higher for respondents in:

- part-year households (87\%)
- FSU households (84\%), Israeli households (91\%), and Holocaust survivor households (91\%)
- Orthodox households (99\%) and Conservative households (89\%)
- synagogue member households ( $91 \%$ ), households who attended Chabad in the past year (88\%), JCC member households (85\%), and Jewish organization member households (88\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (92\%)
- households in which the respondent participated in a Jewish youth group as a teenager (84\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (87\%)
- households who donated \$100-\$500 (86\%) and \$500 and over (87\%) to the Jewish Federation in the past year

The percentage is much lower for respondents in:

- households in Other North Dade (60\%) and East Kendall (64\%)
- non-elderly single households (61\%)
- Just Jewish households (54\%)
- conversionary in-married households (59\%) and intermarried households (49\%)
- synagogue non-member households (64\%)
- households in which no adult visited Israel (62\%)

## Being Jewish Is Mainly a Matter of....

Table 6-15 shows that 8\% of Jewish respondents in Miami feel that to them personally being Jewish is mainly a matter of religion; $11 \%$, ancestry; $21 \%$, culture; 2\%, religion and ancestry; $3 \%$, religion and culture; $14 \%$, ancestry and culture; and $42 \%$, all three. Cumulatively, $54 \%$ of respondents included religion in their responses; $69 \%$, ancestry, and $80 \%$, culture.
$46 \%$ of respondents feel that being Jewish is mainly a matter of ancestry, culture, or both, thus excluding religion as a component.

The $8 \%$ who feel that being Jewish is mainly a matter of religion compares to $15 \%$ in the Pew study. The $46 \%$ who feel that being Jewish is mainly a matter of ancestry, culture, or both compares to $62 \%$ in the Pew study. The $42 \%$ who feel that being Jewish is mainly a matter of all three (ancestry, culture, and religion) compares to $23 \%$ in the Pew study.

Comparisons Among Population Subgroups. Table 6-15 shows that, overall, 8\% of respondents feel that to them being Jewish is mainly a matter of religion. The percentage is much higher for respondents in:

- Orthodox households (21\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (15\%)

## PROUD TO BE JEWISH

〕ewish respondents in Miami were asked if they agree or disagree with the statement "I am proud to be Jewish." 99\% of respondents agreed, which compares to $94 \%$ in the Pew study.

## Strong Sense OF BELONGING TO THE JEWISH PEOPLE

$T$ able 6-16 shows that $92 \%$ of Jewish respondents in Miami agree with the statement "I have a strong sense of belonging to the Jewish people." The 92\% compares to 75\% in the Pew study.

Comparisons Among Population Subgroups. Table 6-16 shows that, overall, $92 \%$ of respondents agree with the statement "I have a strong sense of belonging to the Jewish people.' The percentage is much higher for respondents in:

- Orthodox households (100\%) and Conservative households (98\%)
- synagogue member households (98\%) and JCC member households (98\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (98\%)

The percentage is much lower for respondents in:

- Just Jewish households (82\%)
- intermarried households (81\%)

## Have a Special Responsibility to TAKE CARE OF Jews in Need Around the World

Table 6-16 shows that $77 \%$ of Jewish respondents in Miami agree with the statement "I have a special responsibility to take care of Jews in need around the world." The $77 \%$ compares to $63 \%$ in the Pew study.

Comparisons Among Population Subgroups. Table 6-? shows that, overall, 77\% of respondents agree with the statement "I have a special responsibility to take care of Jews in need around the world." The percentage is much higher for respondents in:

- Hispanic households (88\%), Sephardic households (89\%), and Israeli households (93\%)
- Orthodox households (96\%) and Conservative households (87\%)
- synagogue member households (90\%), households who attended Chabad in the past year (90\%), JCC member households (89\%), and Jewish organization member households (89\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (93\%)
- households who donated \$100-\$500 (88\%) and \$500 and over (91\%) to the Jewish Federation in the past year

The percentage is much lower for respondents in:

- elderly single households (67\%)
- Just Jewish households (63\%)
- intermarried households (66\%)
- households in which no adult visited Israel (61\%)

## Religious Practices

Table 6-17 summarizes the overall results on religious practices observed by Jewish households in Miami. Some questions were asked with the responses always, usually, sometimes, and never (participate in a Passover Seder, light Chanukah candles, light Sabbath candles, and have a Christmas tree). Other questions were asked with yes and no responses (have a mezuzah on the front door, keep a kosher home, keep kosher in and out of the home, and refrain from using electricity on the Sabbath). In examining these results, it should be noted that some respondents may overstate the level of observance of religious practices.

Having a mezuzah on the front door, a ritual that generally must be observed only when one moves into a new residence, is observed by $80 \%$ of households. Participating in a Passover Seder is always/usually observed by $81 \%$ of households and lighting Chanukah candles, by $76 \%$ (both annual rituals). Lighting Sabbath candles, a weekly ritual, is always/usually observed by $32 \%$ of households. Keeping a kosher home, an ongoing practice, is observed by $20 \%$ of households and keeping kosher in and out of the home, by $13 \%$ of respondents. $7 \%$ of respondents refrain from using electricity on the Sabbath, a weekly ritual. 8\% of households always/usually have a Christmas tree in the home and $13 \%$ always/usually/sometimes have one.

Among the comparison Jewish communities, Miami has the third highest percentage of respondents who keep kosher in and out of the home (13\%) and the third highest percentage who refrain from the use of electricity on the Sabbath (7\%). Miami has the fourth highest percentage of households who always/usually light Sabbath candles (32\%), the fifth highest percentage who have a mezuzah on the front door ( $80 \%$ ), the sixth highest percentage who always/usually participate in a Passover Seder (81\%), an above average percentage who keep a kosher home (20\%), and an average percentage who always/usually light Chanukah candles (76\%).

Miami also has the third lowest percentage of households who always/usually/sometimes have a Christmas tree (13\%).

TABLE 6-17
SUMMARY OF RESULTS ON RELIGIOUS PRACTICES
Base: Jewish Households
Sample Size: 2,020, Number of Households: 55,700

| Religious Practice | Always+ <br> Usually <br> or Yes | Always <br> or Yes | Usually | Some- <br> times | Never <br> or No |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Have a Mezuzah on the Front Door | $80.2 \%$ | $80.2 \%$ |  |  | 19.8 |
| Participate in a Passover Seder | $80.8 \%$ | $69.4 \%$ | 11.4 | 12.8 | 6.4 |
| Light Chanukah Candles | $76.2 \%$ | $66.5 \%$ | 9.7 | 11.8 | 12.0 |
| Light Sabbath Candles | $31.9 \%$ | $25.0 \%$ | 6.9 | 22.0 | 46.1 |
| Keep a Kosher Home | $19.6 \%$ | $19.6 \%$ |  |  | 80.4 |
| Keep Kosher In/Out of Home | $13.3 \%$ | $13.3 \%$ |  |  | 86.7 |
| Refrain from Using Electricity | $7.4 \%$ | $7.4 \%$ |  |  | 92.6 |
| Have a Christmas Tree | $7.5 \%$ | $6.1 \%$ | 1.4 | 5.5 | 87.0 |

## Practice

Table 6-18 shows that $87 \%$ of Jewish respondents in Miami reported that someone in their household observes at least one of the following religious practices (practice):
(1) Participate in a Passover Seder (always/usually);
(2) Light Chanukah candles (always/usually);

3 Light Sabbath candles (always/usually); or
4 Keep a kosher home (yes).
Community Comparisons. Table 6-19 shows that the $87 \%$ who practice is about average among about 45 comparison Jewish communities and compares to $89 \%$ in South Palm Beach, $88 \%$ in West Palm Beach, $87 \%$ in Atlanta, $85 \%$ in Broward, $84 \%$ in Washington, 81\% in New York, and 80\% in Cleveland. The 87\% compares to 87\% in 2004 and 86\% in 1994.
$\checkmark$ If having a mezuzah on the front door is added to the list of religious practices, the 87\% of households increases to $94 \%$.

Comparisons Among Population Subgroups. Table 6-18 shows that, overall, 87\% of households practice. The percentage is much higher in:

- Israeli households (99\%)
- households with children (99\%)
- Orthodox households (100\%)
- synagogue member households (99\%) and Jewish organization member households (97\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (98\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (99\%)

The percentage is much lower for:

- Just Jewish households (72\%)
- intermarried households (77\%)
- households in which no adult visited Israel (76\%)

## Have a Mezuzah on the Front Door

Table $\mathbf{6 - 2 0}$ shows that $80 \%$ of Jewish households in Miami have a mezuzah on the front door.

Community Comparisons. Table 6-21 shows that the $80 \%$ who have a mezuzah on the front door is the fifth highest of about 40 comparison Jewish communities and compares to $87 \%$ in South Palm Beach, $83 \%$ in West Palm Beach, $79 \%$ in Broward, and $55 \%$ in Washington. The $80 \%$ compares to $82 \%$ in 2004 and $76 \%$ in 1994. The $80 \%$ compares to $61 \%$ nationally (for a mezuzah on any door of the house).

Comparisons Among Population Subgroups. Table 6-20 shows that, overall, 80\% of households have a mezuzah on the front door. The percentage is much higher in:

- part-year households (91\%)
- households in North Dade Core West (92\%)
- Sephardic households (91\%), Israeli households (98\%), and Holocaust survivor households (91\%)
- Orthodox households (98\%) and Conservative households (90\%)
- in-married households (91\%)
- synagogue member households (94\%), households who attended Chabad in the past year (19\%), and JCC member households (90\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (92\%)
- households who donated \$100-\$500 (91\%) and \$500 and over (91\%) to the Jewish Federation in the past year

The percentage is much lower for:

- households in Other North Dade (65\%) and NE South Dade (66\%)
- households who rent their home (68\%)
- non-elderly single households (68\%)
- intermarried households (56\%)
- households in which no adult visited Israel (67\%)

## Participate in a Passover Seder

Table 6-22 shows that 69\% of respondents in Jewish households in Miami reported that someone in their household always participates in a Passover Seder; 11\%, usually; $13 \%$, sometimes; and 6\%, never. In total, $81 \%$ of households always/usually participate in a Seder.

Community Comparisons. Table 6-23 shows that the $81 \%$ who always/usually participate in a Seder is sixth highest of about 55 comparison Jewish communities and compares to $80 \%$ in South Palm Beach, $79 \%$ in West Palm Beach, $77 \%$ in Washington, 75\% in Broward, 70\% in Cleveland, 69\% in New York, and 62\% in Atlanta. The 81\% compares to $79 \%$ in 2004 and $77 \%$ in 1994.

The 6\% who never participate in a Seder is the third lowest of about 50 comparison Jewish communities and compares to 19\% in Atlanta, 14\% in New York, 12\% in Cleveland, 8\% in Broward, and 7\% in each of South Palm Beach, West Palm Beach, and Washington. The 6\% compares to 7\% in 2004 and 9\% in 1994.

Comparisons Among Population Subgroups. Table 6-22 shows that, overall, 81\% of households always/usually participate in a Seder. The percentage is much higher in:

- part-year households (94\%)
- households in North Beach (94\%)
- Israeli households (97\%)
- households under age 35 (92\%)
- households with children (92\%)
- Orthodox households (97\%)
- synagogue member households (97\%), households who attended Chabad in the past year (93\%), JCC member households (91\%), and Jewish organization member households (94\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (97\%)
- households in which the respondent participated in a Jewish youth group as a teenager (91\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (91\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (98\%)

The percentage is much lower for:

- FSU households (70\%)
- households earning an annual income under \$25,000 (69\%)
- Just Jewish households (65\%)
- intermarried households (61\%)
- households in which no adult visited Israel (65\%)

## Light Chanukah Candles

Table 6-24 shows that 67\% of respondents in Jewish households in Miami reported that someone in their household always lights Chanukah candles; 10\%, usually; 12\%, sometimes; and 12\%, never. In total, $76 \%$ of households always/usually light Chanukah candles.

Community Comparisons. Table 6-25 shows that the $76 \%$ who always/usually light Chanukah candles is about average among about 55 comparison Jewish communities and compares to $77 \%$ in South Palm Beach, $76 \%$ in West Palm Beach, $74 \%$ in both Broward and Atlanta, 70\% in Washington, 69\% in Cleveland, and 68\% in New York. The 76\% compares to $77 \%$ in 2004 and $72 \%$ in 1994.

The $12 \%$ who never light Chanukah candles is about average among about 50 comparison Jewish communities and compares to $21 \%$ in New York, 18\% in Cleveland, 16\% in Broward, $13 \%$ in each of South Palm Beach, West Palm Beach, and Washington, and $12 \%$ in Atlanta. The 12\% compares to 13\% in 2004 and 17\% in 1994.

Comparisons Among Population Subgroups. Table 6-24 shows that, overall, 76\% of households always/usually light Chanukah candles. The percentage is much higher in:

- part-year households (90\%)
- Sephardic households (88\%) and Israeli households (96\%)
- households with children (94\%) and households with only adult children (86\%)
- Orthodox households (96\%) and Conservative households (87\%)
- in-married households (86\%) and conversionary in-married households (88\%)
- synagogue member households (93\%), households who attended Chabad in the past year (89\%), and JCC member households (91\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (9188\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (89\%)
- households who donated \$100-\$500 (86\%) and \$500 and over (90\%) to the Jewish Federation in the past year

The percentage is much lower for:

- FSU households (64\%)
- elderly single households (64\%)
- Just Jewish households (59\%)
- households in which no adult visited Israel (64\%)

## Light Sabbath Candles

Table 6-26 shows that 25\% of respondents in Jewish households in Miami reported that someone in their household always lights Sabbath candles; 7\%, usually; 22\%, sometimes; and $46 \%$, never. In total, $32 \%$ of households always/usually light Sabbath candles. A significant decline is seen in the percentage of households who always/usually light Sabbath candles (32\%) from the percentages for the three practices discussed previously (76\%-81\%).

Community Comparisons. Table 6-27 shows that the $32 \%$ who always/usually light Sabbath candles is the fourth highest of about 55 comparison Jewish communities and compares to 33\% in New York, 23\% in both Cleveland and Atlanta, 22\% in South Palm Beach, $21 \%$ in Broward, 19\% in Washington, and 17\% in West Palm Beach. The 32\% compares to $34 \%$ in 2004 and $29 \%$ in 1994. The $32 \%$ compares to $23 \%$ nationally.

The $46 \%$ who never light Sabbath candles is below average among about 55 comparison Jewish communities and compares to 59\% in West Palm Beach, 55\% in South Palm Beach, $52 \%$ in both Broward and Washington, $50 \%$ in both New York and Cleveland, and $48 \%$ in Atlanta. The $46 \%$ compares to $43 \%$ in 2004 and $50 \%$ in 1994. The $46 \%$ compares to $51 \%$ nationally.

Comparisons Among Population Subgroups. Table 6-26 shows that, overall, 32\% of households always/usually light Sabbath candles. The percentage is much higher in:

- part-year households (49\%)
- households in North Dade Core West (45\%), North Beach (49\%), and Middle Beach (44\%)
- Hispanic households (56\%), Sephardic households (52\%), Israeli households (69\%), and Holocaust survivor households (54\%)
- households age 35-49 (44\%)
- households with children (53\%)
- Orthodox households (86\%)
- in-married households (45\%)
- synagogue member households ( $54 \%$ ), households who attended Chabad in the past year (58\%), and JCC member households (50\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (67\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (46\%)
- households in which an adult visited Israel on a general trip (43\%)
- households who donated \$100-\$500 (42\%) and $\$ 500$ and over (42\%) to the Jewish Federation in the past year

The percentage is much lower for:

- households in Other North Dade (20\%), West Kendall (18\%), NE South Dade (19\%), and South Beach (21\%)
- non-elderly single households (14\%)
- Reform households (18\%) and Just Jewish households (21\%)
- intermarried households (17\%)
- synagogue non-member households (19\%)
- households in which the respondent attended supplemental school as a child (22\%)
- households in which no adult visited Israel (13\%)

## Keep Kosher

Table 6-28 shows that 13\% of respondents in Jewish households in Miami keep kosher in and out of the home and 6\% keep kosher in the home only. In total, 20\% (10,917 households) of households keep a kosher home, and 33,740 persons live in a kosher home. The respondent defined "kosher" for himself/herself.
$\checkmark$ If it is assumed that all persons in households in which the respondent keeps kosher in and out of the home also keep kosher in and out of the home, then 24,518 persons keep kosher in and out of the home.

Community Comparisons. Table 6-29 shows that the $20 \%$ who keep a kosher home is above average among about 55 comparison Jewish communities and compares to 32\% in New York, 20\% in Cleveland, 16\% in Broward, 14\% in South Palm Beach, 13\% in Atlanta, 12\% in Washington, and 9\% in West Palm Beach. The 20\% compares to 22\% in 2004 and $20 \%$ in 1994. The 20\% compares to $17 \%$ nationally.

The $13 \%$ who keep kosher in and out of the home is the third highest of about 35 comparison Jewish communities and compares to $7 \%$ in Washington, $5 \%$ in both Broward and South Palm Beach, and 3\% in West Palm Beach. The 13\% compares to $12 \%$ in both 2004 and 1994. The 13\% compares to 10\% nationally.

## Comparisons Among Population Subgroups.

## Keep a Kosher Home

Table 6-28 shows that, overall, $20 \%$ of households keep a kosher home. The percentage is much higher in:

- part-year households (37\%)
- households in North Dade Core West (37\%), North Beach (39\%), and Middle Beach (35\%)
- Sephardic households (42\%), Israeli households (48\%), and Holocaust survivor households (41\%)
- households age 35-49 (30\%)
- households with children (34\%)
- Orthodox households (87\%)
- synagogue member households (36\%), households who attended Chabad in the past year (39\%), and JCC member households (32\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (51\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (31\%)

The percentage is much lower for:

- households in Other North Dade (9\%), West Kendall (4\%), East Kendall (9\%), and NE South Dade (10\%)
- Reform households (3\%) and Just Jewish households (9\%)
- intermarried households (5\%)
- synagogue non-member households (10\%)
- households in which no adult visited Israel (7\%)

## Keep Kosher In and Out of the Home

Table 6-28 shows that, overall, $13 \%$ of respondents keep kosher in and out of the home. The percentage is much higher for respondents in:

- households in North Dade Core West (28\%), North Beach (24\%), and Middle Beach (29\%)
- Sephardic households (30\%), Israeli households (32\%), and Holocaust survivor households (23\%)
- households with children (25\%)
- Orthodox households (76\%)
- synagogue member households (26\%) and households who attended Chabad in the past year (28\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (39\%)

The percentage is much lower for respondents in:

- households in West Kendall (1\%)
- Reform households (1\%) and Just Jewish households (4\%)
- intermarried households (4\%)
- households in which no adult visited Israel (3\%)

## REFRAIN FROM Using Electricity on the Sabbath

Table 6-30 shows that 7\% of respondents in Jewish households in Miami refrain from using electricity on the Sabbath.

Community Comparisons. Table 6-31 shows that the $7.4 \%$ who refrain from using electricity on the Sabbath is the third highest of about 30 comparison Jewish communities and compares to $2.9 \%$ in Washington, $2.1 \%$ in South Palm Beach, $1.6 \%$ in Broward, and $0.8 \%$ in West Palm Beach. The $7.4 \%$ compares to $6.5 \%$ in 2004 and $6.9 \%$ in 1994.

Comparisons Among Population Subgroups. Table 6-30 shows that, overall, 7\% of respondents in Jewish households refrain from using electricity on the Sabbath. The percentage is much higher for respondents in:

- households in North Dade Core West (18\%), North Beach (23\%), and Middle Beach (23\%)
- households with children (17\%)
- Orthodox households (57\%)
- synagogue member households (17\%) and households who attended Chabad in the past year (19\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (31\%)

The percentage is much lower for respondents in:

- households in Other North Dade (1\%), West Kendall (1\%), and East Kendall (1\%)
- Reform households (0\%)
- intermarried households (1\%)
- households in which no adult visited Israel (1\%)

## Have a Christmas Tree

Table 6-32 shows that 6\% of Jewish households in Miami always have a Christmas tree; 1\%, usually; 6\%, sometimes; and 87\%, never. In total, 13\% of households always/usually/sometimes have a Christmas tree.

Community Comparisons. Table 6-33 shows that the $13 \%$ who always/usually/sometimes have a Christmas tree is the third lowest of about 40 comparison Jewish communities and compares to $27 \%$ in Washington, $14 \%$ in both West Palm Beach and Broward, and 8\% in South Palm Beach. The 13\% compares to 14\% in 2004 and 12\% in 1994.

Comparisons Among Population Subgroups. Table 6-32 shows that, overall, 13\% of households always/usually/sometimes have a Christmas tree. The percentage is much higher in:

- households in East Kendall (31\%)
- non-elderly couple households (24\%)
- conversionary in-married households (27\%) and intermarried households (61\%)
- households in which no adult visited Israel (23\%)

The percentage is much lower for:

- Orthodox households (1\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (2\%)
$\checkmark$ Of households in which everyone was born or raised Jewish, $2 \%$ always have a Christmas tree; 1\%, usually; 4\%, sometimes; and 94\%, never.
$\checkmark$ Of households in which everyone is currently Jewish, 2\% always have a Christmas tree; $1 \%$, usually; 4\%, sometimes; and 93\%, never.
$\checkmark$ Of households who always have a Christmas tree, $67 \%$ also always light Chanukah candles and $11 \%$ never do. Of households who always light Chanukah candles, $6 \%$ always have a Christmas tree and $90 \%$ never do.
$\checkmark 4 \%$ of households always have a Christmas tree and always light Chanukah candles. $11 \%$ of households never have a Christmas tree and never light Chanukah candles.
$\checkmark$ Of intermarried households with Jewish children, 49\% always/usually/sometimes have a Christmas tree.

## SYNAGOGUE ATTENDANCE

Table 6-34 shows that 28\% of Jewish respondents in Miami never attend synagogue services (attend services) or attend services only for weddings, b'nai mitzvah ceremonies, and other such occasions (special occasions). $33 \%$ of respondents attend services only on the High Holidays; 18\%, a few times per year; and 22\%, once per month or more, including $12 \%$ who attend services once per week or more. Thus, $72 \%$ of respondents attend services at least once per year, other than for special occasions. The discussion below focuses on the percentage of respondents who attend services once per month or more and the percentage who never attend services. Never attend services includes respondents who never attend synagogue services and respondents who attend synagogue services only for special occasions (1.

Community Comparisons. Table 6-35 shows that the $22 \%$ who attend services once per month or more is about average among about 45 comparison Jewish communities and compares to 31\% in Cleveland, 29\% in New York, 22\% in Washington, 20\% in South Palm Beach, 18\% in Broward, and 16\% in West Palm Beach. The 22\% compares to 26\% in 2004 and $22 \%$ in 1994. The $22 \%$ compares to $24 \%$ nationally.

The $28 \%$ who never attend services is about average among about 45 comparison Jewish communities and compares to $35 \%$ in New York, $32 \%$ in both Cleveland and Broward, 31\% in both Washington and West Palm Beach, and 28\% in South Palm Beach. The $28 \%$ compares to $25 \%$ in 2004 and $24 \%$ in 1994. The $28 \%$ compares to $40 \%$ nationally.

Age of Respondent. Table 6-36 shows that the $27 \%$ of respondents under age 35 who attend services once per month or more is the seventh highest of about 40 comparison Jewish communities and compares to $43 \%$ in Cleveland, $41 \%$ in New York, 20\% in South Palm Beach, 16\% in Broward, 12\% in Washington, and 9\% in West Palm Beach. The 27\% compares to $30 \%$ in 2004 and $24 \%$ in 1994. The $27 \%$ compares to $18 \%$ nationally.

The $27 \%$ of respondents age 35-49 who attend services once per month or more is about average among about 40 comparison Jewish communities and compares to $33 \%$ in New York, 28\% in Washington, 26\% in Cleveland, 24\% in South Palm Beach, 23\% in Broward, and $16 \%$ in West Palm Beach. The 27\% compares to $35 \%$ in 2004 and 22\% in 1994. The $27 \%$ compares to $29 \%$ nationally.

The $22 \%$ of respondents age 50-64 who attend services once per month or more is about average among about 40 comparison Jewish communities and compares to $32 \%$ in Cleveland, 29\% in New York, 23\% in Washington, and 15\% in each of South Palm Beach, Broward, and West Palm Beach. The 22\% compares to $24 \%$ in 2004 and 20\% in 1994. The $22 \%$ compares to $24 \%$ nationally.

The 20\% of respondents age 65-74 who attend services once per month or more is below average among about 40 comparison Jewish communities and compares to $27 \%$ in Cleveland, $26 \%$ in Washington, $21 \%$ in New York, 18\% in both South Palm Beach and Broward, and 16\% in West Palm Beach. The 20\% compares to $24 \%$ in 2004 and 20\% in
1994. The $20 \%$ compares to $22 \%$ nationally.

The $17 \%$ of respondents age 75 and over who attend services once per month or more is the fourth lowest of about 40 comparison Jewish communities and compares to $29 \%$ in Cleveland, $26 \%$ in New York, $21 \%$ in South Palm Beach, 20\% in Washington, and 18\% in both Broward and West Palm Beach. The 17\% compares to $20 \%$ in 2004 and $23 \%$ in 1994. The $17 \%$ compares to $26 \%$ nationally.

The $18 \%$ of respondents age 65 and over who attend services once per month or more is the fifth lowest of about 40 comparison Jewish communities and compares to $28 \%$ in Cleveland, $24 \%$ in New York, 22\% in Washington, 20\% in South Palm Beach, 18\% in Broward, and $17 \%$ in West Palm Beach. The $18 \%$ compares to $22 \%$ in 2004 and $21 \%$ in 1994. The $18 \%$ compares to $24 \%$ nationally.

Comparisons Among Population Subgroups.

## Attend Services Once per Month or More

Table 6-34 shows that, overall, $22 \%$ of respondents attend services once per month or more. The percentage is much higher for respondents in:

- part-year households (35\%)
- households in North Beach (43\%) and Middle Beach (34\%)
- Sephardic households (31\%) and Holocaust survivor households (33\%)
- households with children (33\%)
- Orthodox households (73\%)
- synagogue member households (48\%), households who attended Chabad in the past year (41\%), JCC member households (38\%), and Jewish organization member households (35\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (43\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (37\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (37\%)

The percentage who attend services once per month or more is much lower for respondents in:

- households in Other North Dade (11\%)
- Just Jewish households (6\%)
- intermarried households (11\%)
- synagogue non-member households (7\%)
- households in which no adult visited Israel (10\%)

## Never Attend Services

Table 6-34 shows that, overall, $28 \%$ of respondents never attend services. The percentage is much higher for respondents (in):

- households in West Kendall (39\%)
- age 75 and over (40\%)
- Just Jewish households (50\%)
- intermarried households (40\%)
- synagogue non-member households (41\%)
- households in which the respondent did not attend Jewish education as a child (39\%)
- households in which no adult visited Israel (45\%)

The percentage is much lower for respondents in:

- Sephardic households (16\%) and Israeli households (16\%)
- households in residence in Miami for 0-4 years (13\%)
- under age 35 (13\%) and age 35-49 (16\%)
- households with children (16\%)
- households earning an annual income of \$200,000 and over (16\%)
- Orthodox households (5\%) and Conservative households (12\%)
- synagogue member households (4\%), households who attended Chabad in the past year (9\%), JCC member households (16\%), and Jewish organization member households (13\%)
- households in which the respondent attended a Jewish day school as a child (9\%)
- households in which the respondent attended or worked at a Jewish overnight camp as a child (17\%)
- households in which the respondent participated in a Jewish youth group as a teenager (15\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (8\%)
- households in which an adult visited Israel on a Jewish trip (14\%)
- households who donated \$100-\$500 (17\%) and \$500 and over (5\%) to the Jewish Federation in the past year

Note that $1.5 \%$ of respondents were not Jewish. In almost all of these cases, the respondent was the non-Jewish spouse, partner, or significant other of a Jewish adult. In these cases, the question reported on in this section was asked of the non-Jewish respondent on behalf of the Jewish household member (in a "proxy" fashion).

Non-Jewish household members were generally interviewed when the Jewish household member would not cooperate with our survey, but the non-Jewish household member would, or when the Jewish household member was unavailable.

## Types Of MARriAge

$\square$ntermarriage has developed into one of the most important issues for the Jewish community and has clearly reached significant proportions in most American Jewish communities. As a result, intermarriage must be taken into account in local Jewish community planning. Although some intermarried couples are contributing significantly to the Jewish community, it is also clear that when measures of "Jewishness" for intermarried and in-married couples are compared in this and other community studies, intermarriage is affecting Jewish continuity.

## Definitions

Three different types of marriage are defined in this study:
(1) In-marriage: An in-marriage is a marriage in which both spouses were born or raised Jewish and currently consider themselves Jewish.
(2) Conversionary In-marriage: A conversionary in-marriage is a marriage in which one spouse was born or raised Jewish and currently considers himself/herself Jewish and the other spouse was not born or raised Jewish but currently considers himself/herself Jewish (no question about formal conversion was asked).
(3 Intermarriage: An intermarriage is a marriage in which one spouse currently considers himself/herself Jewish and the other spouse does not currently consider himself/herself Jewish.

An additional measure is calculated from the last two types of marriage defined above:
(4) Couples Conversion Rate: The couples conversion rate is calculated by dividing the percentage of conversionary in-married couples (2) by the total percentage of married couples involving marriages between Jewish persons and persons not born or raised Jewish (conversionary in-married couples (2) and intermarried couples (3)).

Note that an adult is defined in this study as born or raised Jewish if he/she considers himself/herself to have been born or raised Jewish. No question was asked about whether a formal conversion occurred. Note as well that while Halakhah (Jewish law) makes no distinction between in-marriages between two persons born or raised Jewish and conversionary in-marriages in which formal conversion has occurred, social scientists make this distinction to study several aspects of marital choice and its influence on Jewish behaviors.

## Various Types of Intermarriage Rates

Intermarriage rates may be reported based on married couples or individuals. As an illustration, imagine that two weddings occur. In wedding one, Moshe (a Jew) marries Rachel (also a Jew). In wedding two, Abraham (a Jew) marries Christine (a non-Jew). Thus, there are two married couples, one of whom is intermarried. In this illustration, the couples intermarriage rate is $50 \%$. Another method of calculating an intermarriage rate,
however, is to note that there are three Jews (Moshe, Rachel, and Abraham) and one of the three (Abraham) is married to a non-Jew (Christine). In this illustration, the individual intermarriage rate is $33 \%$.

The intermarriage rates most frequently reported in local Jewish community studies are based on persons who currently consider themselves Jewish. Persons born or raised Jewish who have converted to another religion or attend services of another religion on a regular basis (irrespective of formal conversion), are normally not interviewed as Jews in most Jewish community studies. Thus, all intermarriage rates are based on persons currently Jewish, not all persons born or raised Jewish.

Note as well that the rates reported in this section are for all existing married couples, not for marriages that have occurred recently (in the past five years, for example) as are reported in both the 1990 and 2000-01 National Jewish Population Surveys.

## Intermarriage by Age

Table 6-37 shows that the Miami Jewish community contains 31,750 married couples. 74\% ( 23,622 married couples) of married couples involve in-marriages between two persons born or raised Jewish, $9 \%$ (2,984 married couples) involve conversionary in-marriages, and $16 \%$ ( 5,144 married couples) involve intermarriages.

The couples intermarriage rate decreases from $25 \%$ in households age $35-49$ to $15 \%$ in households age $50-64,13 \%$ in households age $65-74$, and $8 \%$ in households age 75 and over.

Row A shows that the couples conversion rate is $37 \%$ ( $9 \% /(9 \%+16 \%)$, where $9 \%$ is the percentage of conversionary in-married couples and $16 \%$ is the percentage of intermarried couples. Note that no question was asked about whether a formal conversion occurred. No consistent relationship is seen between the conversion rate and the age of the head of the household.

Row B shows that 15\% of married born or raised Jewish persons (rather than married couples) are married to persons not born or raised Jewish. 18\% of married born or raised Jewish persons in households under age 35 and $20 \%$ of married born or raised Jewish persons in households age $35-49$ are married to persons not born or raised Jewish, compared to $16 \%$ of married born or raised Jewish persons in households age 50-64, 11\% of married born or raised Jewish persons in households age 65-74, and 8\% of married born or raised Jewish persons in households age 75 and over.

Note that while, overall, $16 \%$ of married couples are intermarried and $9 \%$ are conversionary in-married, $15 \%$ of married born or raised Jewish persons are married to persons not born or raised Jewish.

Row C shows that 9\% of married Jewish persons (rather than married couples) are married to persons not currently Jewish, that is, are intermarried. 11\% of married Jews in households under age 35 and $15 \%$ of married Jews in households age 35-49 are intermarried, compared to $8 \%$ of married Jews in households age 50-64, 7\% of married Jews in households age 65-74, and 4\% of married Jews in households age 75 and over.

Note that while, overall, $26 \%$ of married couples involve marriages between persons born or raised Jewish and persons not born or raised Jewish, 16\% of married couples are intermarried, 9\% of married Jewish persons are intermarried. Thus, the couples intermarriage rate in Miami is $16 \%$ and the individual intermarriage rate is $9 \%$.

Since 60\% of Jewish adults are married (Chapter 5) and 9\% of married Jews are intermarried, $5 \%$ of all Jewish adults (both married and single) in Miami are intermarried.

Row D shows that 5\% of married born or raised Jewish persons (rather than married couples) are married to Jews-by-Choice. Note that while, overall, $9 \%$ of married couples involve conversionary in-marriages, $5 \%$ of married Jewish persons are married to Jews-by-Choice.

Community Comparisons. Table 6-39 shows that the $16 \%$ couples intermarriage rate is the third lowest of about 55 comparison Jewish communities and compares to $50 \%$ in Atlanta, 41\% in Washington, 38\% in Cleveland, 22\% in New York, 18\% in Broward, 16\% in West Palm Beach, and 9\% in South Palm Beach. The 16\% compares to $16 \%$ in 2004 and $12 \%$ in 1994. The $16 \%$ compares to $48 \%$ nationally. The $16 \%$ compares to $61 \%$ in the Pew Research Center's Survey of Jewish Americans (www.pewforum.org)

The $37 \%$ couples conversion rate is the second highest of about 50 comparison Jewish communities and compares to $24 \%$ in South Palm Beach, $23 \%$ in New York, 22\% in West Palm Beach, 19\% in Broward, 17\% in Atlanta, and 13\% in Washington. The 37\% compares to 38\% in 2004 and 28\% in 1994.

Age of Head of Household. Table 6-40 shows that the $19 \%$ of married couples in households under age 35 who are intermarried is the third lowest of about 40 comparison Jewish communities and compares to $62 \%$ in Atlanta, $57 \%$ in Broward, $53 \%$ in Washington, $42 \%$ in both West Palm Beach and South Palm Beach, and 14\% in New York. The $19 \%$ compares to $28 \%$ in 2004 and $18 \%$ in 1994. The $19 \%$ compares to $59 \%$ nationally.

The $25 \%$ of married couples in households age 35-49 who are intermarried is the fourth lowest of about 45 comparison Jewish communities and compares to 51\% in Atlanta, 49\% in Washington, $45 \%$ in West Palm Beach, $42 \%$ in Cleveland, $36 \%$ in Broward, 29\% in New York, and 26\% in South Palm Beach. The 25\% compares 20\% in 2004 and 22\% in 1994. The $25 \%$ compares to $58 \%$ nationally.

The $15 \%$ of married couples in households age 50-64 who are intermarried is the fourth lowest of about 50 comparison Jewish communities and compares to 42\% in Atlanta, 40\% in Cleveland, $32 \%$ in Washington, $24 \%$ in both West Palm Beach and New York, 20\% in Broward, and $14 \%$ in South Palm Beach. The $15 \%$ compares to $17 \%$ in 2004 and 12\% in 1994. The $15 \%$ compares to $46 \%$ nationally.

The $13 \%$ of married couples in households age 65-74 who are intermarried is about average among about 45 comparison Jewish communities and compares to $64 \%$ in Atlanta, $52 \%$ in Cleveland, $27 \%$ in Washington, 19\% in New York, 6\% in West Palm Beach, $5 \%$ in South Palm Beach, and 4\% in Broward. The 13\% compares to 11\% in 2004 and $5 \%$ in 1994. The $13 \%$ compares to $24 \%$ nationally.

The 8\% of married couples in households age 75 and over who are intermarried is about average among about 45 comparison Jewish communities and compares to $40 \%$ in Atlanta, $37 \%$ in Washington, $14 \%$ in Cleveland, $12 \%$ in New York, $5 \%$ in West Palm Beach, 4\% in South Palm Beach, and 3\% in Broward. The 8\% compares to 7\% in 2004 and $1 \%$ in 1994. The $8 \%$ compares to $19 \%$ nationally.

The 11\% of married couples in households age 65 and over who are intermarried is about average among about 50 comparison Jewish communities and compares to $55 \%$ in Atlanta, 36\% in Cleveland, 32\% in Washington, 15\% in New York, 6\% in West Palm Beach, 4\% in South Palm Beach, and 3\% in Broward. The 11\% compares to 9\% in 2004 and 4\% in 1994.

Comparisons Among Population Subgroups. Table 6-38 shows that, overall, 16\% of married couples are intermarried. The percentage is much higher for married couples in:

- households in Other North Dade (30\%), East Kendall (28\%), and NE South Dade (30\%)
- households in which no adult visited Israel (34\%)

The percentage is much lower for married couples in:

- part-year households (6\%)
- households in North Dade Core East (6\%)
- Orthodox households (3\%)
- households who donated \$500 and over to the Jewish Federation in the past year (4\%)

## Interest in Singles Programs in the Past Year

In a question asked in the 2004 study, but not repeated in this study, 12\% of households with single Jewish adults age 18-64 were interested in Singles Programs. 8\% attended Jewish singles programs; 1\%, attended other singles programs; and 4\% did not attend singles programs.

For comparisons of these statistics with other communities, see Section 12 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish DataBank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org.

## Used a Jewish Internet Dating Service

In a question asked in the 2004 study, but not repeated in this study, 18\% of households with single Jewish adults age 18-64 used a Jewish Internet Dating Service.

For comparisons of these statistics with other communities, see Section 12 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish DataBank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org.

## Religion of Children in Jewish Households

$\square$able 6-41 shows that 46\% of children age 0-17 in intermarried households in Miami are being raised Jewish only; 30\%, part Jewish; and 24\%, non-Jewish. Note that respondents identified each child in their household as being raised Jewish, part Jewish, or non-Jewish.

Table 6-42 shows that 80\% of Jewish children age 0-17 in married households are being raised in in-married households; 11\%, in conversionary in-married households; and 9\%, in intermarried households. Note that while part Jewish children are included as Jewish in many sections of this report, Table 6-42 reports the results for children being raised Jewish only so as to be comparable to the other communities. $93 \%$ of the part Jewish children are being raised in intermarried households and $7 \%$ in conversionary in-married households.

Table 6-43 shows that 93\% of children age 0-17 in Jewish households are being raised Jewish. Again, to be comparable to other communities, the $93 \%$ refers only to children being raised as Jewish only.

Community Comparisons. Table 6-41 shows that the $46 \%$ of children in intermarried households who are being raised Jewish is above average among about 50 comparison Jewish communities and compares to 75\% in South Palm Beach, 45\% in Washington, 43\% in Broward, 39\% in Atlanta, 34\% in West Palm Beach, 33\% in Cleveland, and 31\% in New York. The 46\% compares to 42\% in 2004 and 65\% in 1994.

Table 6-42 shows that the 9\% of Jewish children in married households who are being raised in intermarried households is the fifth lowest of about 50 comparison Jewish communities and compares to $27 \%$ in both West Palm Beach and Washington, $25 \%$ in Atlanta, 23\% in Broward, 19\% in South Palm Beach, 13\% in Cleveland, and 5\% in New York. The 9\% compares to 7\% in 2004 and 14\% in 1994.

The $11 \%$ of Jewish children in married households who are being raised in conversionary in-married households is about average among about 45 comparison Jewish communities and compares to 16\% in West Palm Beach, 15\% in Atlanta, 10\% in both Washington and Broward, 9\% in South Palm Beach, and 4\% in New York. The 11\% compares to 16\% in 2004 and 9\% in 1994.

Table 6-43 shows that the 93\% of children in Jewish households who are being raised Jewish is the highest of about 50 comparison Jewish communities and compares to $92 \%$ in South Palm Beach, 81\% in New York, 77\% in Broward, 76\% in Washington, 75\% in Cleveland, $74 \%$ in Atlanta, and 67\% in West Palm Beach. The 93\% compares to 91\% in 2004 and $90 \%$ in 1994.

The community comparisons should be treated with caution due to differences in how the information about the religion of children in Jewish households is queried among the various communities. Some communities include "no religion," "undecided," and "part Jewish" as possible responses while others do not, which affects the comparability of the results. In some cases these possible responses are read to the respondent, while in other cases they are not read to the respondent and are reported only if the respondent volunteers the information.

## Persons in Jewish Households Who Are Jewish

Table 6-44 shows that $94 \%$ of persons in Jewish households in Miami consider themselves to be Jewish, or are identified as Jewish by the respondent, or, in the case of children, are being raised Jewish. Note that respondents identified themselves and the other persons in their household as Jewish, part Jewish, or non-Jewish. Not all persons who consider themselves to be Jewish were born or raised Jewish nor underwent a formal conversion. Part Jewish children and adults are included as Jews in this section.

Community Comparisons. Table 6-44 shows that the $94 \%$ who consider themselves to be Jewish is the second highest of about 55 comparison Jewish communities and compares to $96 \%$ in South Palm Beach, $90 \%$ in West Palm Beach, 89\% in Broward, 87\% in New York, 82\% in Cleveland, 80\% in Washington, and 76\% in Atlanta. The 94\% compares to $93 \%$ in both 2004 and 1994. The $94 \%$ compares to $78 \%$ nationally.

## JEWS-BY-CHOICE

Table 6-45 shows that $3.8 \%$ (4,643 persons) of Jewish persons in Jewish households in Miami are Jews-by-Choice. A Jew-by-Choice is defined in this study as any adult (age 18 or over) who was not born or raised Jewish but currently considers himself/herself Jewish or any child (age 0-17) who was not born Jewish but is being raised Jewish (irrespective of formal conversion). Note that respondents identified themselves and the other persons in their household as born, raised, and currently Jewish or non-Jewish.

Community Comparisons. Table 6-45 shows that the $3.8 \%$ Jews-by-Choice is about average among about 35 comparison Jewish communities and compares to $5.8 \%$ in Washington, 2.0\% in West Palm Beach, 1.4\% in Broward, and 1.3\% in South Palm Beach. The 3.8\% compares to $3.8 \%$ in 2004 and $2.3 \%$ in 1994.

## Summary of Memberships

Table $7-1$ shows information on membership in, and participation in the activities of, the organized Jewish community by Jewish households in Miami which is used in the next several sections. The table shows that:
(1) 36\% of households are synagogue members (33\% are members of synagogues located in Miami).
(2) $26 \%$ of households participated in activities organized by Chabad in the past year.
(3) 12\% of households are members of one of the three Jewish Community Centers (JCC) in Miami or a JCC outside South Florida (11\% are members of a JCC in Miami);
(4) 31\% of households participated in or attended a program at one of the three local JCCs in the past year;
(5 24\% of households are members of a Jewish organization other than a synagogue or JCC, such as B'nai B'rith, The Tribe, or WIZO; and
© 51\% of households are associated with the Jewish community; that is, they are members of a synagogue, a JCC, or a Jewish organization.

Tables 7-14, 7-15, and 7-16 show information on JCC membership and JCC participation in each of the three local JCCs in Miami. These tables show that:
(1) 11\% of households in North Dade are members of the Michael-Ann Russell Jewish Community Center (Russell JCC);
(2) 27\% of households in North Dade participated in or attended a program at the Russell JCC in the past year;
(3) 9\% of households in South Dade are members of the Alper Jewish Community Center (Alper JCC);
(4) $21 \%$ of households in South Dade participated in or attended a program at the Alper JCC in the past year;
(5) 16\% of households in The Beaches are members of the Miami Beach Jewish Community Center (Galbut Family Miami Beach JCC); and
(6) 27\% of households in The Beaches participated in or attended a program at the Galbut Family Miami Beach JCC in the past year.

Special Note: With the exception of the results for All and by Geographic Area, the results shown in Tables 7-14, 7-15, and 7-16 reflect only households who live in the geographic area served by the JCC as indicated in the bold font in each table.

## Lifetime Synagogue Membership

In questions asked in the 2004 study, but not repeated in this study, 10\% of respondents in Jewish households who were not currently synagogue members, but were members in the past, planned to join in the future and $24 \%$ did not plan to join in the future. $6 \%$ who were not members in the past planned to join in the future and $21 \%$ did not plan to join in the future. The total who were not members in the past, but planned to join in the future was 16\%.

For comparisons of these statistics with other communities, see Section 13 of Ira M. Sheskin. Comparison s of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org.

## SYNAGOGUE MEMBERSHIP

Table $\mathbf{7 - 1}$ shows that $36 \%$ (19,997 households) of Jewish households in Miami are synagogue members. Table 7-6 shows that $33 \%$ (18,214 households) of households reported synagogue membership in a synagogue located in Miami.

Community Comparisons. Table 7-2 shows that the $36 \%$ synagogue membership is below average among about 55 comparison Jewish communities and compares to 44\% in New York, $42 \%$ in Cleveland, $37 \%$ in Washington, $33 \%$ in both Atlanta and South Palm Beach, 30\% in West Palm Beach, and 27\% in Broward. The 36\% compares to 39\% in 2004 and $37 \%$ in 1994. The 36\% compares to $40 \%$ nationally.

Age of Head of Household. Table 7-3 shows that the 30\% synagogue membership of households under age 35 is about average among about 45 comparison Jewish communities and compares to 57\% in New York, 54\% in Cleveland, 31\% in Atlanta, 27\% in South Palm Beach, 19\% in Washington, 17\% in Broward, and 10\% in West Palm Beach. The $30 \%$ compares to $31 \%$ in 2004 and $40 \%$ in 1994. The $30 \%$ compares to $34 \%$ nationally.

The 45\% synagogue membership of households age 35-49 is about average among about 50 comparison Jewish communities and compares to $45 \%$ in New York, $42 \%$ in both Washington and Cleveland, 38\% in South Palm Beach, 36\% in Broward, 33\% in Atlanta, and $22 \%$ in West Palm Beach. The $45 \%$ compares to $51 \%$ in 2004 and $42 \%$ in 1994. The $45 \%$ compares to $41 \%$ nationally.

The 40\% synagogue membership of households age 50-64 is about average among about 50 comparison Jewish communities and compares to $46 \%$ in Washington, $43 \%$ in New York, $40 \%$ in Cleveland, $31 \%$ in both Atlanta and West Palm Beach, 27\% in South Palm Beach, and 22\% in Broward. The 40\% compares to 39\% in 2004 and 36\% in 1994. The $40 \%$ compares to $42 \%$ nationally.

The $34 \%$ synagogue membership of households age 65-74 is well below average among about 50 comparison Jewish communities and compares to $44 \%$ in Washington, $33 \%$ in New York and South Palm Beach, 31\% in West Palm Beach, 30\% in Broward, 29\% in Cleveland, and 24\% in Atlanta. The 34\% compares to $37 \%$ in 2004 and $34 \%$ in 1994. The $34 \%$ compares to $40 \%$ nationally.

The 29\% synagogue membership of households age 75 and over is the fifth lowest of about 50 comparison Jewish communities and compares to 60\% in Atlanta, 51\% in Cleveland, $43 \%$ in New York, $34 \%$ in both South Palm Beach and West Palm Beach, 32\% in Washington, and 26\% in Broward. The 29\% compares to 34\% in 2004 and 33\% in 1994. The $29 \%$ compares to $41 \%$ nationally.

The $32 \%$ synagogue membership of households age 65 and over is the fifth lowest of about 50 comparison Jewish communities and compares to $41 \%$ in Cleveland, $40 \%$ in Atlanta, 39\% in New York, 37\% in Washington, 34\% in South Palm Beach, 33\% in West Palm Beach, and $28 \%$ in Broward. The 32\% compares to $35 \%$ in 2004 and $33 \%$ in 1994. The $32 \%$ compares to $40 \%$ nationally.

Household Structure. Table $7-4$ shows that the $51 \%$ of households with children who are synagogue members is about average among about 50 comparison Jewish communities and compares to $64 \%$ in New York, $60 \%$ in Cleveland, $56 \%$ in Washington, 46\% in South Palm Beach, 44\% in Atlanta, 40\% in Broward, and 31\% in West Palm Beach. The 51\% compares to $64 \%$ in 2004 and 55\% in 1994. The 51\% compares to 55\% nationally.

Type of Marriage. Table 7-5 shows that the $22 \%$ of intermarried households who are synagogue members is about average among about 55 comparison Jewish communities and compares to $19 \%$ in Washington, $15 \%$ in New York, 13\% in both Cleveland and South Palm Beach, 11\% in Broward, 10\% in West Palm Beach, and 7\% in Atlanta. The 22\% compares to $13 \%$ in 2004 and $22 \%$ in 1994. The $22 \%$ compares to $23 \%$ nationally.

Comparisons Among Population Subgroups. Table 7-1 shows that, overall, 36\% of households are synagogue members. The percentage is much higher in:

- part-year households (58\%)
- households in East Kendall (53\%), North Beach (61\%), and Middle Beach (47\%)
- Sephardic households (47\%)
- households with children (51\%) and households with only adult children (49\%)
- households earning an annual income of \$200,000 and over (61\%)
- Orthodox households (81\%) and Conservative households (47\%)
- in-married households (51\%)
- households who attended Chabad in the past year (50\%), JCC member households (61\%), and Jewish organization member households (53\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (55\%) and for 1-6 years (47\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (48\%)
- households in which an adult visited Israel on a Jewish trip (52\%)
- households who donated to the Jewish Federation in the past year (52\%)
- households who donated \$100-\$500 (57\%) and \$500 and over ( $85 \%$ ) to the Jewish Federation in the past year

The percentage is much lower in:

- non-elderly single households (16\%) and elderly single households (23\%)
- households earning an annual income under \$25,000 (20\%) and \$25,000\$50,000 (22\%)
- Just Jewish households (14\%)
- intermarried households (22\%)
- households in which no adult attended Jewish education as a child (25\%)
- households in which no adult visited Israel (17\%)

## LOCATION OF SYNAGOGUE MEMBERSHIP

Table 7-1 shows that $36 \%$ of Jewish households in Miami reported synagogue membership in a synagogue located either in Miami or elsewhere. Table 7-6 shows that $33 \%$ (18,214 households) of households reported synagogue membership in a synagogue located in Miami. Thus, $91 \%$ of the synagogue memberships are local. (See the "Results of the Synagogue Survey-Synagogue Membership" section in this Chapter for synagogue membership according to the Synagogue Survey.)

Table $7-7$ shows that the $91 \%$ local synagogue membership is below average among about 35 comparison Jewish communities and compares to 100\% in Washington, 73\% in Broward, 57\% in South Palm Beach, and 51\% in West Palm Beach. The 91\% compares to $89 \%$ in 2004 and $87 \%$ in 1994.

## Results of the Synagogue SurveySynagogue Membership

Table $\mathbf{7 - 1}$ shows that, according to the Telephone Survey, 36\% (19, 996 households) of Jewish households in Miami reported synagogue membership. Table 7-6 shows that $33 \%$ ( 18,214 households) of households reported synagogue membership in a synagogue located in Miami (local synagogue membership). Table 7-8 shows that, according to the Synagogue Survey, 13,720 households who live in Miami (25\%) are members of a synagogue located in Miami. Thus, the Telephone Survey implies that local synagogue membership is 8 percentage points higher than that suggested by the Synagogue Survey.

Community Comparisons. Table 7-9 shows that the 25\% local synagogue membership according to the Synagogue Survey is well below average among about 35 comparison Jewish communities and compares to $26 \%$ in Washington, and $13 \%$ in each of South Palm Beach, West Palm Beach, and Broward. The 25\% compares to $23 \%$ in 2004 and $19 \%$ in 1994.

## Disparity Between Telephone Survey and Synagogue Survey

The 8 percentage point disparity between the percentage of households who are members of a local synagogue according to the Telephone Survey and the percentage of households who are members of a local synagogue according to the Synagogue Survey is about average among about 35 comparison Jewish communities and compares to 11 percentage points in Washington, 6 percentage points in both South Palm Beach and Broward, and 3 percentage points in West Palm Beach. The 8 percentage points compares to 11 percentage points in 2004 and 13 percentage points in 1994.

Such a disparity is common in Jewish community studies. Why the disparity?
(1) Not all potential respondents cooperated with the Telephone Survey. It is likely that synagogue member households formed a disproportionately high share of households who responded to the Telephone Survey.
(2) Many former synagogue members still attend synagogue services on High Holidays, as well as for various other functions, and may report membership when in fact they are not actually current members.
(3) Even with an anonymous survey, there may be a certain reluctance on the part of respondents to state they are not synagogue members. As a result, some respondents may claim to be synagogue members when in fact they are not.
(4) Despite assurances to the contrary, some respondents may feel that questions concerning synagogue membership will lead to an appeal for membership. As a result, respondents may claim to be synagogue members when in fact they are not.
(6) The estimate of Jewish households $(55,700)$ may be too high, resulting in a lower calculated percentage of synagogue membership according to the Synagogue Survey.

## Changes in Synagogue Membership, 1994-2014

Table 7-8 shows synagogue membership of households in Miami in synagogues located in Miami for 1994, 2004, and 2014 according to the Synagogue Survey. From 1994-2014, membership of Miami households in synagogues located in Miami changed from 12,940 households in 1994 to 12,525 households in 2004 and 13,720 households in 2014. From 2004 to 2014, synagogue membership increased by $10 \%$.

From 1994-2014, membership of Miami households in Orthodox synagogues located in Miami increased from 2,399 households in 1994 to 3,027 households in 2004 and 5,444 households in 2014. From 1994 to 2014, Orthodox synagogue membership increased by 127\%. From 2004 to 2014, Orthodox synagogue membership increased by $80 \%$.

Within the Orthodox membership category, Chabad synagogues increased from 448 households in 1994 to 1,060 households in 2004 and 2,714 households in 2014. Young Israel increased from 328 in 1994 to 596 in 2004 and remained about the same in 2014. Other Orthodox synagogues decreased from 1,623 households in 1994 to 1,371 households in 2004 and then increased to 2,136 households in 2014.

In 1994, 3\% of synagogue member households were members of Chabad. This increased to $8 \%$ in 2004 and $20 \%$ in 2014.

In 1994, 19\% of Orthodox synagogue member households were members of Chabad. This increased to $35 \%$ in 2004 and $50 \%$ in 2014.

From 1994-2014, membership of Miami households in Sephardic synagogues located in Miami increased from 175 households in 1994 to 285 households in 2004 and 410 households in 2014. From 1994 to 2014, Sephardic synagogue membership increased by $134 \%$. From 2004 to 2014, Sephardic synagogue membership increased by $44 \%$.

From 1994-2014, membership of Miami households in Conservative synagogues located in Miami decreased from 5,720 households in 1994 to 4,652 households in 2004 and 3,413 households in 2014. From 1994 to 2014, Conservative synagogue membership decreased by $40 \%$. From 2004 to 2014, Conservative synagogue membership decreased by $27 \%$.

From 1994-2014, membership of Miami households in Reconstructionist synagogues located in Miami remained about the same at just over 200 households.

From 1994-2014, membership of Miami households in Reform synagogues located in Miami decreased from 4,416 households in 1994 to 4,346 households in 2004 and 4,148 households in 2014. From 1994 to 2014, Reform synagogue membership decreased by 6\%. From 2004 to 2014, Reform synagogue membership decreased by 5\%.

Note that Temple Samu-EI Or Olom (which was Conservative in 1994 and 2004) merged with Bet Breira (which is Reform) in 2009. The merged entity is now classified as Reform. This recategorization somewhat inflates the $27 \%$ decrease in Conservative membership and somewhat moderates the 5\% decrease in Reform membership.

## Denomination of Synagogue Membership

Table 7-10 shows that, according to the Synagogue Survey, $43 \%$ of households who are members of a synagogue located in Miami are members of an Orthodox synagogue (including 20\% in Chabad, 4\% in Young Israel, 16\% in "general" Orthodox synagogues, and $3 \%$, Sephardic), $25 \%$, a Conservative synagogue; $1 \%$, a Reconstructionist synagogue; $30 \%$, a Reform synagogue; and $1 \%$, other synagogues.

Community Comparisons. Table 7-11 shows that the $43 \%$ membership in Orthodox synagogues (which includes the 3\% membership in Sephardic synagogues) is the second highest of about 40 comparison Jewish communities and compares to $19 \%$ in South Palm Beach, $16 \%$ in West Palm Beach, 12\% in Broward, and 11\% in Washington. The $43 \%$ compares to $26 \%$ in 2004 and $20 \%$ in 1994. The $43 \%$ compares to $21 \%$ nationally.

Table 7-12 shows that the $25 \%$ membership in Conservative synagogues is the third lowest of about 40 comparison Jewish communities and compares to $54 \%$ in West Palm Beach, $51 \%$ in Broward, $46 \%$ in South Palm Beach, and 42\% in Washington. The 25\% compares to $37 \%$ in 2004 and $45 \%$ in 1994. The $25 \%$ compares to $33 \%$ nationally.

Table 7-13 shows that the $30 \%$ membership in Reform synagogues is well below average among about 40 comparison Jewish communities and compares to $38 \%$ in Washington, 32\% in South Palm Beach, 29\% in Broward, and 28\% in West Palm Beach. The 30\% compares to $35 \%$ in 2004 and $34 \%$ in 1994. The $30 \%$ compares to $39 \%$ nationally.

## ATTEND ANY ACTIVITIES ORGANIZED BY CHABAD IN THE PAST YEAR

Table 7 -1 shows that $26 \%$ ( 14,315 households) of Jewish households in Miami attended activities organized by Chabad in the past year.

Comparisons Among Population Subgroups. Table 7-1 shows that, overall, 26\% of households attended activities organized by Chabad in the past year. The percentage is much higher in:

- households in North Beach (42\%)
- Hispanic households (42\%), Sephardic households (41\%), and Israeli households (46\%)
- households in residence in Miami for 0-4 years (43\%)
- households under age 35 ( $47 \%$ ) and age 35-49 (36\%)
- households with children (42\%)
- Orthodox households (61\%)
- synagogue member households (36\%), JCC member households (39\%), and Jewish organization member households (36\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (51\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (42\%)

The percentage is much lower in:

- households age 75 and over (10\%)
- elderly couple households (15\%) and elderly single households (12\%)
- Reform households (16\%)
- households in which no adult visited Israel (15\%)

## Jewish Community Center Membership

Table $\mathbf{7 - 1}$ shows that 12\% (6,740 households) of Jewish households in Miami reported membership in a Jewish Community Center (JCC), including 11\% (6,350 households) who are members in Miami. Table 7-18 shows that the 11\% compares to $11 \%$ in 2004 and $8 \%$ in 1994. The $11 \%$ compares to $18 \%$ nationally.

Table 7-17 show that 6\% of households throughout Miami reported membership in the Michael-Ann Russell JCC; 3\%, in the Dave and Mary Alper JCC; and 3\%, in the Galbut Family Miami Beach JCC.

## Community Comparisons.

Table 7-18 shows that the 11\% local JCC membership is about average among about 50 comparison JCCs and compares to 18\% in Cleveland, 10\% in Atlanta, 9\% in Washington, $7 \%$ in West Palm Beach, and 4\% in both South Palm Beach and Broward. The $11 \%$ compares to $11 \%$ in 2004 and $8 \%$ in 1994. The $11 \%$ compares to $18 \%$ nationally for any JCC.

The 11\% of households in North Dade who reported membership in the Michael-Ann Russell JCC (MARJCC) is about average among about 50 comparison JCCs and compares to 18\% in Cleveland, 16\% in Miami (Miami Beach), 11\% in Washington (Greater Washington), 10\% in both Atlanta and Washington (DCJCC), 9\% in Miami (Alper JCC), 7\% in West Palm Beach (Kaplan), 6\% in Broward (Posnack), 5\% in both West Palm Beach (Boynton) and Washington (NOVA),4\% in South Palm Beach, and 1\% in Broward (Soref). The $11 \%$ compares to $10 \%$ in 2004 and $7 \%$ in 1994.

22\% of households with children in North Dade are members of the MARJCC. The 22\% is about average among about 50 comparison JCCs and compares to 28\% in Miami (Miami Beach), 26\% in Cleveland, 19\% in West Palm Beach (Boynton), 16\% in Atlanta, 15\% in both Washington (DCJCC) and Washington (Greater Washington), 14\% in Broward (Posnack), 13\% in South Palm Beach, 12\% in Miami (Alper), 6\% in Washington (NOVA), and 3\% in Broward (Soref). The 22\% compares to 33\% in 2004 and 19\% in 1994.

The 9\% of households in South Dade who reported membership in the Alper JCC is below average among about 50 comparison JCCs and compares to $18 \%$ in Cleveland, $16 \%$ in Miami (Miami Beach), 11\% in both Miami (Russell) and Washington (Greater Washington), 10\% in both Atlanta and Washington (DCJCC), 7\% in West Palm Beach (Kaplan), 6\% in Broward (Posnack), 5\% in both West Palm Beach (Boynton) and Washington (NOVA), 4\% in South Palm Beach, and 1\% in Broward (Soref). The 9\% compares to 13\% in both 2004 and 1994.
$12 \%$ of households with children in South Dade are members of the Alper JCC. The $12 \%$ is well below average among about 50 comparison JCCs and compares to $28 \%$ in Miami (Miami Beach), 26\% in Cleveland, 22\% in Miami (MARJCC), 19\% in West Palm Beach (Boynton), 16\% in Atlanta, 15\% in both Washington (DCJCC) and Washington
(Greater Washington), 14\% in Broward (Posnack), 13\% in South Palm Beach, 6\% in Washington (NOVA), and 3\% in Broward (Soref). The 12\% compares to 23\% in 2004 and 27\% in 1994.

The $16 \%$ of households in The Beaches who reported membership in the Miami Beach JCC is about average among about 50 comparison JCCs and compares to $18 \%$ in Cleveland, $11 \%$ in both Miami (Russell) and Washington (Greater Washington), 10\% in both Atlanta and Washington (DCJCC), $9 \%$ in Miami (Alper JCC), $7 \%$ in West Palm Beach (Kaplan), 6\% in Broward (Posnack), 5\% in both West Palm Beach (Boynton) and Washington (NOVA), 4\% in South Palm Beach, and 1\% in Broward (Soref). The 16\% compares to $5 \%$ in 2004 and $3 \%$ in 1994. This increase is due to the replacement of a facility that was not a full service facility with a new facility.

28\% of households with children in The Beaches are members of the Miami Beach JCC. The $28 \%$ is above average among about 50 comparison JCCs and compares to $26 \%$ in Cleveland, 22\% in Miami (Russell), 19\% in West Palm Beach (Boynton), 16\% in Atlanta, $15 \%$ in both Washington (DCJCC) and Washington (Greater Washington), 14\% in Broward (Posnack), 13\% in South Palm Beach, 12\% in Miami (Alper), 6\% in Washington (NOVA), and 3\% in Broward (Soref). The 22\% compares to 8\% in 2004 and 11\% in 1994.

Table 7-19 shows that the $22 \%$ local JCC membership of households with children is about average among about 50 comparison JCCs and compares to $26 \%$ in Cleveland, $17 \%$ in West Palm Beach, $16 \%$ in Atlanta, $13 \%$ in both South Palm Beach and Broward, and $12 \%$ in Washington. The $22 \%$ compares to $27 \%$ in 2004 and $21 \%$ in 1994. The $22 \%$ compares to $25 \%$ nationally for any JCC.

Table 7-20 shows that the 8\% local JCC membership of intermarried households is about average among about 45 comparison JCCs and compares to $7 \%$ in West Palm Beach, 5\% in both Cleveland and Broward, 4\% in both South Palm Beach and Washington, and 3\% in Atlanta. The 8\% compares to 5\% in 2004 and 4\% in 1994. The 8\% compares to $10 \%$ nationally for any JCC.

Table 7-21 shows that the 13 percentage point disparity between the percentage of intermarried households who are members of a local synagogue and the percentage of households who are members of a local JCC is about average among about 45 comparison Jewish communities and compares to 15 percentage points in Washington, 9 percentage points in South Palm Beach, 8 percentage points in Cleveland, 6 percentage points in Broward, 4 percentage points in Atlanta, and 3 percentage points in West Palm Beach. The 13\% percentage points compares to 8 percentage points in 2004 and 18 percentage points in 1994.

## Comparisons Among Population Subgroups.

## Results for all Three JCCs and Non-Local JCCs Combined

Table 7-1 shows that, overall, $12 \%$ of households are JCC members. The percentage is much higher in:

- households in Middle Beach (25\%)
- households with children (22\%)
- Orthodox households (24\%)
- households who donated \$100-\$500 (22\%) and \$500 and over (23\%) to the Jewish Federation in the past year

The percentage is much lower in:

- FSU households (2\%)

## Michael Ann Russell JCC

Table 7-14 shows that, overall, 11\% of North Dade households are JCC members. The percentage is much higher in:

- households age 35-49 (23\%)
- households with children (22\%) and households with only adult children (24\%)
- households earning an annual income of \$200,000 and over (22\%)
- Orthodox households (21\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (22\%) and 1-6 years (26\%)
- households who donated \$100-\$500 (23\%) and \$500 and over (25\%) to the Jewish Federation in the past year

The percentage is much lower in:

- part-year households (0\%)
- FSU households (0\%)

## Dave and Mary Alper JCC

Table 7-15 shows that, overall, 9\% of South Dade households are JCC members. The percentage is much lower in:

- households in NE South Dade (2\%)

## Galbut Family Miami Beach JCC

Table 7-16 shows that, overall, $16 \%$ of households are JCC members. The percentage is much higher in:

- Israeli households (29\%)
- households who live in single family homes (29\%)
- households with children (28\%) and households with only adult children (29\%)
- households earning an annual income of \$200,000 and over (29\%)
- households who donated \$100-\$500 to the Jewish Federation in the past year (26\%)

The percentage is much lower in:

- part-year households (0\%)
- households who live in townhouses (3\%)
- households earning an annual income under \$50,000 (4\%)

## LOCATION OF JCC MEMBERSHIP

$\mathbf{R}$ ecall that 12\% of Jewish households in Miami reported JCC membership (Table 7-1). Table $7-17$ shows that $11 \%$ of the JCC memberships are located in Miami. Thus, $11 \%$ ( 6,350 households) of all Jewish households in Miami reported JCC membership in a local JCC. (See the section on "Results of the JCC Survey-JCC Membership" for the number of JCC members based upon the JCC Survey.)

| * In communities with more than one JCC and where data are available for each JCC, results reflect only the membership of households who live in the service area of each JCC. <br> ** The JCCs are located in neighboring communities. <br> - JCC is not a full service facility. <br> ${ }^{1}$ NJPS 2000 data are for the more Jewishly-connected sample. JCC membership is in any JCC, not just the local JCC. <br> Note: Non-local JCC membership is not included in the table. This understates JCC membership in communities with a large number of part-year households. |  |  |  |  |

# RESULTS OF THE JCC SURVEYJewish Community Center Membership 

Table 7-17 shows that, according to the Telephone Survey, 11\% (6,350 households) of Jewish households in Miami reported membership in one of the three Jewish Community Centers of Miami (JCCs). Table 7-22 shows that, according to the JCC Survey, 4,740 Jewish households who live in Miami (9\%) are members of a JCC. Thus, the Telephone Survey implies that local JCC membership is 3 percentage points higher than that suggested by the JCC Survey. The 9\% JCC membership according to the JCC Survey is just outside the margin of error of the $11 \%$ according to the Telephone Survey.

Community Comparisons. Table 7-23 shows that the 9\% JCC membership according to the JCC Survey is about average among about 30 comparison Jewish communities and compares to $6 \%$ in Washington, $4 \%$ in both South Palm Beach and West Palm Beach, and 2\% in Broward. The 9\% compares to 8\% in 2004 and 6\% in 1994.

## Disparity Between Telephone Survey and Synagogue Survey

The 3 percentage point disparity between the percentage of households who are members of the local JCC according to the Telephone Survey and the percentage of households who are members of the local JCC according to the JCC Survey is about average among about 30 comparison Jewish communities and compares to 3 percentage points in both West Palm Beach and Washington and 1 percentage point in both South Palm Beach and Broward. The 3 percentage point disparity compares to 3 percentage points in 2004 and 2 percentage points in 1994.

Such a disparity is common in Jewish community studies. Why the disparity?
(1) Not all potential respondents cooperated with the Telephone Survey. It is likely that JCC member households formed a disproportionately high share of households who responded to the Telephone Survey.
(2) Many former JCC members still attend various JCC events and programs and may report membership when in fact they are not actually paying dues.

3 Despite assurances to the contrary, some respondents may feel that questions concerning JCC membership will lead to an appeal for membership. As a result, respondents may claim to be JCC members when in fact they are not.
(4) The Telephone Survey estimate of the number of Jewish households may be too high, resulting in a lower calculated percentage of JCC membership according to the JCC Survey.

Change in JCC Membership, 1994-2014.
Table 7-22 shows that, according to the JCC Survey, from 2004-2014 membership in the JCC of Jewish households who live in Miami increased by 7\%, from 4,439 households in 2004 to 4,740 households in 2014.

TABLE 7-22
Results of the JCC Survey-Number of Member Households

|  |  | Number of Jewish Households |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Jewish Community Center | Location | 1994 | 2004 | 2014 | 2004-2014 Increase/ (Decrease) |
| Michael-Ann Russell JCC | North Dade | 1,775 | 2,144 | 1,700 | (444) |
| Dave and Mary Alper JCC | South Dade | 1,675 | 1,800 | 1,603 | (197) |
| Galbut Family Miami Beach JCC | The Beaches | 720 | 495 | 1,440 | 945 |
| Total |  | 4,170 | 4,439 | 4,743 | 304 |

Note that, particularly for the Alper JCC, many older former members continue to be involved via the Silver Sneakers program.

# MAJOR REASONS FOR NOT JOINING THE JEWISH COMMUNITY CENTER 

Respondents in Jewish households in Miami who are not currently members of one of the Jewish Community Centers (JCCs) in Miami (non-member households) were asked: "What is the major reason you have not joined the JCC? Would you say it is distance from your home, cost, quality of the programs, you have no need for the services offered, or some other reason?"

Tables 7-24, 7-26, and 7-28 show the major reasons for not joining the JCC most commonly reported by respondents in non-member households. The tables also show results for non-member households who participated in a local JCC program in the past year.

## Michatl-AnN RUSSELL JCC

Table 7-24 shows that, overall, 48\% of respondents in Jewish households who are not members of the JCC responded no need for the services offered; $17 \%$, cost; $9 \%$, too old; $8 \%$, lack of time; and $5 \%$, distance from home. The major difference for JCC non-members who participated in the JCC in the past year is that $24 \%$ of these participants responded cost.

Community Comparisons. Table 7-30 shows that the 48\% who reported no need for the services offered is the seventh highest of about 40 comparison JCCs and compares to $55 \%$ in West Palm Beach (Boynton), 54\% in both Broward (Posnack) and Broward (Soref), $50 \%$ in South Palm Beach, 48\% in Washington (Gr. Wash), 45\% in Washington (DCJCC), 43\% in Miami (Miami Beach), 42\% in both Miami (Alper) and Washington (NOVA), and 41\% in West Palm Beach (Kaplan). The 48\% compares to 49\% in 2004 and 47\% in 1994.

Table 7-31 shows that the $17 \%$ who reported cost is about average among about 40 comparison JCCs and compares to 18\% in each of Miami (Alper), Miami (Miami Beach), and Washington (DCJCC), 15\% in Broward (Posnack), 14\% in both South Palm Beach and Washington (Gr. Wash), 13\% in Washington (NOVA), 12\% in Broward (Soref), and 11\% in both West Palm Beach (Boynton) and West Palm Beach (Kaplan). The 17\% compares to $19 \%$ in 2004 and 12\% in 1994.

Table 7-32 shows that the $8 \%$ who reported lack of time is the seventh highest of about 40 comparison JCCs and compares to $14 \%$ in Miami (Miami Beach), 11\% in Washington (DCJCC), $9 \%$ in Miami (Alper), $8 \%$ in both West Palm Beach (Boynton) and Washington (Gr. Wash), 7\% in both South Palm Beach and West Palm Beach (Kaplan), 6\% in Washington (NOVA), 5\% in Broward (Soref), and 4\% in Broward (Posnack). The 8\% compares to 6\% in 2004 and $7 \%$ in 1994.

Table 7-33 shows that the 5\% who reported distance from home is the second lowest of about 40 comparison JCCs and compares to 19\% in Washington (NOVA), 16\% in both Miami (Alper) and Washington (Gr. Wash), 15\% in West Palm Beach (Kaplan), 11\% in Broward (Posnack), 10\% in Broward (Soref), 7\% in Washington (DCJCC), 6\% in both Miami (Miami Beach) and South Palm Beach, and 4\% in West Palm Beach (Boynton). The $5 \%$ compares to $5 \%$ in 2004 and $11 \%$ in 1994.

Table 7-34 shows that the $1 \%$ who reported quality of the programs is about average among about 40 comparison JCCs and compares to $4 \%$ in Miami (Alper), 3\% in Washington (Gr. Wash), 2\% in each of Miami (Miami Beach), West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (DCJCC), and Washington (NOVA), 1\% in both South Palm Beach and Broward (Soref) and 0\% in Broward (Posnack). The 1\% compares to $2 \%$ in 2004 and $3 \%$ in 1994.

## Comparisons Among Population Subgroups.

## No Need for the Services Offered

Table 7-25 shows that, overall, 48\% of respondents in non-member households reported no need for the services offered as the major reason for not joining the Michael-Ann Russell JCC. The percentage is much higher for respondents in:

- Hispanic households (62\%)
- non-elderly couple households (65\%) and elderly couple households (61\%)
- households earning an annual income of \$100,000-\$200,000 (60\%) and \$200,000 and over (72\%)
- households who donated \$100-\$500 (59\%) and \$500 and over (70\%) to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- age 35-49 (38\%)
- households earning an annual income of under $\$ 25,000$ (28\%) and $\$ 25,000$ \$50,000 (35\%)
- households who were asked but did not donate to the Jewish Federation in the past year (38\%)

## Cost

Table 7-25 shows that, overall, 17\% of respondents in non-member households reported cost as the major reason for not joining the Michael-Ann Russell JCC. The percentage is much higher for respondents (in):

- households in residence in Miami for 0-4 years (32\%)
- under age 35 (33\%) and age 35-49 (27\%)
- households with children (31\%)
- households earning an annual income under \$25,000 (30\%) and \$25,000\$50,000 (30\%)
- Orthodox households (31\%)
- households who attended Chabad in the past year (30\%)
- households who were asked but did not donate to the Jewish Federation in the past year (28\%)

The percentage is much lower for respondents (in):

- part-year households (0\%)
- age 75 and over (6\%)
- elderly couple households (7\%)
- households earning an annual income of \$200,000 and over (1\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (3\%)

## Too Old

Table 7-25 shows that, overall, 9\% of respondents in non-member households reported too old as the major reason for not joining the Michael-Ann Russell JCC. The percentage is much higher for respondents (in):

- age 75 and older (25\%)
- elderly single households (25\%)

The percentage is much lower for respondents (in):

- Hispanic households (1\%) and Israeli households (2\%)
- households in residence in Miami for 0-4 years (0\%)
- under age 35 (0\%), age 35-49 (1\%), and age 50-64 (2\%)
- households earning an annual income of \$100,000-\$200,000 (1\%)
- conversionary in-married households (0\%) and intermarried households (2\%)

## Lack of time

Table 7-25 shows that, overall, 8\% of respondents in non-member households reported lack of time as the major reason for not joining the Michael-Ann Russell JCC. The percentage is much higher for respondents in:

- conversionary in-married households (22\%) and intermarried households (18\%)

The percentage is much lower for respondents in:

- part-year households (0\%)

## Distance from Home

Table 7-25 shows that, overall, $5 \%$ of respondents in non-member households reported distance from home as the major reason for not joining the Michael-Ann Russell JCC. No population subgroups show important differences from the overall percentage.

TABLE 7-24
SUMMARY OF MAJOR REASONS FOR NOT JOINING the Michael AnN Russell JCC

Base: Respondents in Jewish Households Who Are Not Members of the JCC

| Reason | All | JCC Participants |
| :--- | :---: | :---: |
| No Need for Services Offered * | $48.0 \%$ | $46.0 \%$ |

* These responses were read to the respondents. The responses Too Old and Lack of Time were not read to the respondents, but were volunteered by respondents as major reasons. All other reasons volunteered by the respondents, none of which were individually significant, are reported as Other.

## Dave and Mary Alper JCC

Tables 7-26 shows that, overall, 42\% of respondents in Jewish households who are not members of the JCC responded no need for the services offered; 18\%, cost; 16\%, distance from home; and $9 \%$, lack of time. For JCC non-member households who participated in the JCC in the past year, $34 \%$ responded no need for the services offered; $27 \%$, cost; $23 \%$, lack of time; and $10 \%$, distance from home.

Community Comparisons. Table 7-30 shows that the $42 \%$ who reported no need for the services offered is about average among about 40 comparison JCCs and compares to 55\% in West Palm Beach (Boynton), 54\% in both Broward (Posnack) and Broward (Soref), 50\% in South Palm Beach, $48 \%$ in both Miami (Russell) and Washington (Gr. Wash), $45 \%$ in Washington (DCJCC), 43\% in Miami (Miami Beach), 42\% in Washington (NOVA), and 41\% in West Palm Beach (Kaplan). The 42\% compares to 45\% in 2004 and 47\% in 1994.

Table 7-31 shows that the $18 \%$ who reported cost is about average among about 40 comparison JCCs and compares to $18 \%$ in both Miami (Miami Beach) and Washington (DCJCC), $17 \%$ in Miami (Russell), $15 \%$ in Broward (Posnack), $14 \%$ in both South Palm Beach and Washington (Gr. Wash), 13\% in Washington (NOVA), 12\% in Broward (Soref), and 11\% in both West Palm Beach (Boynton) and West Palm Beach (Kaplan). The 18\% compares to 18\% in 2004 and 20\% in 1994.

Table 7-33 shows that the 16\% who reported distance from home is about average among about 40 comparison JCCs and compares to 19\% in Washington (NOVA), 16\% in Washington (Gr. Wash), 15\% in West Palm Beach (Kaplan), 11\% in Broward (Posnack), 10\% in Broward (Soref), $7 \%$ in Washington (DCJCC), $6 \%$ in both Miami (Miami Beach) and South Palm Beach, 5\% in Miami (Russell), and 4\% in West Palm Beach (Boynton). The 16\% compares to 18\% in 2004 and $14 \%$ in 1994.

Table 7-32 shows that the $9 \%$ who reported lack of time is the sixth highest of about 40 comparison JCCs and compares to 14\% in Miami (Miami Beach), 11\% in Washington (DCJCC), 8\% in each of Miami (Russell), West Palm Beach (Boynton Beach), and Washington (Gr. Wash), 7\% in both South Palm Beach and West Palm Beach (Kaplan), 6\% in Washington (NOVA), 5\% in Broward (Soref) and 4\% in Broward (Posnack). The 9\% compares to $6 \%$ in 2004 and $5 \%$ in 1994.

Table 7-34 shows that the $4 \%$ who reported quality of the programs is the fourth highest of about 40 comparison JCCs and compares to 3\% in Washington (Gr. Wash), 2\% in each of Miami (Miami Beach), West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (DCJCC), and Washington (NOVA), and 1\% in each of Miami (Russell), South Palm Beach, Broward (Soref), and 0\% in Broward (Posnack). The 4\% compares to 2\% in both 2004 and 1994.

## Comparisons Among Population Subgroups.

## No Need for the Services Offered

Table 7-27 shows that, overall, 42\% of respondents in non-member households reported no need for the services offered as the major reason for not joining the Alper JCC. The percentage is much higher for respondents (in):

- households in residence in Miami for 0-4 years (57\%)
- under age 35 (53\%)
- non-elderly single households (55\%) and elderly couple households (61\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (58\%)

The percentage is much lower for respondents (in):

- Hispanic households (28\%)
- townhouses (26\%)
- age 35-49 (27\%)
- households with children (28\%) and elderly single households (29\%)
- households earning an annual income under \$50,000 (26\%)

## Cost

Table 7-27 shows that, overall, 18\% of respondents in non-member households reported cost as the major reason for not joining the Alper JCC. The percentage is much higher for respondents in:

- elderly single households (29\%)
- households earning an annual income under \$50,000 (41\%)
- households who donated under $\$ 100$ to the Jewish Federation in the past year (29\%)

The percentage is much lower for respondents (in):

- East Kendall (8\%)
- households in residence in Miami for 0-4 years (7\%)
- high rises (8\%)
- age 35-49 (7\%)
- non-elderly couple households (8\%)
- households earning \$200,000 and over (1\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (0\%)

## Distance from Home

Table 7-27 shows that, overall, 16\% of respondents in non-member households reported distance from home as the major reason for not joining the Alper JCC. The percentage is much higher for respondents (in):

- age 35-49 (37\%)
- households with children (33\%)
- households earning an annual income of $\$ 200,000$ and over (31\%)

The percentage is much lower for respondents in:

- West Kendall (6\%)

## Lack of time

Table 7-27 shows that, overall, 9\% of respondents in non-member households reported lack of time as the major reason for not joining the Alper JCC. The percentage is much higher for respondents in:

- households who participated in a JCC program in the past year (23\%)

The percentage is much lower for respondents in:

- Sephardic households (2\%)

TABLE 7-26

* These responses were read to the respondents. The response Lack of Time was not read to the respondents, but was volunteered by respondents as a major reason. All other reasons volunteered by the respondents, none of which were individually significant, are reported as Other.

## Galbut Family MiAmi Beach JCC

Tables 7-28 shows that, overall, 43\% of respondents in Jewish households who are not members of the JCC responded no need for the services offered; 18\%, cost; $14 \%$, lack of time, $7 \%$, lack of information about the JCC; and 6\%, distance from home. For JCC nonmember households who participated in the JCC in the past year, 43\% responded cost; 33\%, no need for the services offered; and $15 \%$, lack of time.

Community Comparisons. Table $7-30$ shows that the $43 \%$ who reported no need for the services offered is about average among about 40 comparison JCCs and compares to 55\% in West Palm Beach (Boynton), 54\% in both Broward (Posnack) and Broward (Soref), 50\% in South Palm Beach, $48 \%$ in both Miami (Russell) and Washington (Gr. Wash), $45 \%$ in Washington (DCJCC), 42\% in both Miami (Alper) and Washington (NOVA), and 41\% in West Palm Beach (Kaplan). The 43\% compares to 49\% in 2004 and 56\% in 1994.

Table 7-31 shows that the $18 \%$ who reported cost is about average among about 40 comparison JCCs and compares to $18 \%$ in both Miami (Alper) and Washington (DCJCC), $17 \%$ in Miami (Russell), 15\% in Broward (Posnack), 14\% in both South Palm Beach and Washington (Gr. Wash), 13\% in Washington (NOVA), 12\% in Broward (Soref), and 11\% in both West Palm Beach (Boynton) and West Palm Beach (Kaplan). The 18\% compares to $11 \%$ in 2004 and $10 \%$ in 1994.

Table 7-32 shows that the 14\% who reported lack of time is the second highest of about 40 comparison JCCs and compares to 11\% in Washington (DCJCC), 9\% in Miami (Alper), 8\% in each of Miami (Russell), West Palm Beach (Boynton Beach), and Washington (Gr. Wash), 7\% in both South Palm Beach and West Palm Beach (Kaplan), 6\% in Washington (NOVA), 5\% in Broward (Soref), and 4\% in Broward (Posnack). The 14\% compares to 6\% in both 2004 and 1994.

Table 7-33 shows that the 6\% who reported distance from home is the third lowest of about 40 comparison JCCs and compares to 19\% in Washington (NOVA), 16\% in both Miami (Alper) and Washington (Gr. Wash), 15\% in West Palm Beach (Kaplan), 11\% in Broward (Posnack), 10\% in Broward (Soref), 7\% in Washington (DCJCC), 6\% in South Palm Beach, 5\% in Miami (Russell), and 4\% in West Palm Beach (Boynton). The 6\% compares to 6\% in 2004 and 9\% in 1994.

Table 7-34 shows that the $2 \%$ who reported quality of the programs is about average among about 40 comparison JCCs and compares to 4\% in Miami (Alper), 3\% in Washington (Gr. Wash), $2 \%$ in each of West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (DCJCC), and Washington (NOVA), and 1\% in each of Miami (Russell), South Palm Beach, Broward (Soref), and 0\% in Broward (Posnack). The 2\% compares to 2\% in 2004 and 3\% in 1994.

## Comparisons Among Population Subgroups.

## No Need for the Services Offered

Table 7-29 shows that, overall, 43\% of respondents in non-member households reported no need for the services offered as the major reason for not joining the Miami Beach JCC. The percentage is much higher for respondents (in):

- age 50-64 (61\%)
- Jewish organization member households (57\%)

The percentage is much lower for respondents (in):

- age 75 and over (26\%)
- households with children (29\%)

## Cost

Table 7-29 shows that, overall, 18\% of respondents in non-member households reported cost as the major reason for not joining the Miami Beach JCC. The percentage is much higher for respondents in:

- households who participated in a JCC program in the past year (43\%)
- households with children (35\%)

The percentage is much lower for respondents (in):

- age 75 and over (0\%)
- elderly couple households (3\%)
- households who donated to the Jewish Federation in the past year (8\%)

Lack of time
Table 7-29 shows that, overall, 14\% of respondents in non-member households reported lack of time as the major reason for not joining the Miami Beach JCC. No population subgroups show important differences from the overall percentage.

## Distance from Home

Table 7-29 shows that, overall, 6\% of respondents in non-member households reported distance from home as the major reason for not joining the Miami Beach JCC. The percentage is much higher for respondents in:

- households in North Beach (16\%)
- Orthodox households (18\%)

## Too Old

Table 7-29 shows that, overall, 4\% of respondents in non-member households reported too old as the major reason for not joining the Miami Beach JCC. The percentage is much higher for respondents:

- age 75 and older (27\%)

TABLE 7-28

## JEWISH COMMUNITY CENTER PARTICIPATION IN THE PAST YEAR

Table $7-1$ shows that $31 \%$ ( 17,211 households) of Jewish households in Miami contain a member who participated in or attended a program at, or sponsored by, one of the three Jewish Community Centers (JCCs) (participated in a JCC program) in Miami in the past year. Table 7-35 shows that the $31 \%$ compares to $31 \%$ in 2004 and $24 \%$ in 1994. The $31 \%$ compares to $34 \%$ nationally.

Note that all households who are members of the JCC were assumed to participate in a JCC program in the past year.

Table 7-36 shows that 20\% of households contain a member who participated in a JCC program in the past year without being a member of a JCC. The $20 \%$ is calculated by subtracting the percentage of households who are JCC members from the percentage of households who contain a member who participated in a JCC program in the past year. The $20 \%$ compares to $20 \%$ in 2004 and $16 \%$ in 1994 . The $20 \%$ compares to $16 \%$ nationally for any JCC.

## Community Comparisons.

## Michael Ann Russell JCC

Table 7-35 shows that the $27 \%$ who participated in a JCC program in the past year is below average among about 50 comparison JCCs and compares to $44 \%$ in Washington (DCJCC), 38\% in Washington (Gr. Wash), 32\% in New York, 28\% in Cleveland, 27\% in Miami (Miami Beach), 23\% in West Palm Beach (Kaplan), 21\% in Miami (Alper), 20\% in West Palm Beach (Boynton), 19\% in South Palm Beach, 17\% in Broward (Posnack), 14\% in Washington (NOVA), and 5\% in Broward (Soref). The 27\% compares to 28\% in 2004 and 21\% in 1994. The $27 \%$ compares to $34 \%$ nationally for any JCC.

Table $7-36$ shows that the $17 \%$ who participated in a JCC program in the past year without being a member is about average among about 45 comparison JCCs and compares to $35 \%$ in Washington (DCJCC), $27 \%$ in Washington (Gr. Wash), 16\% in West Palm Beach (Kaplan), 15\% in both South Palm Beach and West Palm Beach (Boynton), 13\% in Miami (Alper), $11 \%$ in both Broward (Posnack) and Miami (Miami Beach), $9 \%$ in both Cleveland and Washington (NOVA), and 4\% in Broward (Soref). The 17\% compares to 17\% in 2004 and $13 \%$ in 1994. The $17 \%$ compares to $16 \%$ nationally for any JCC.

## Dave and Mary Alper JCC

Table 7-35 shows that the $21 \%$ who participated in a JCC program in the past year is well below average among about 50 comparison JCCs and compares to $44 \%$ in Washington (DCJCC), $38 \%$ in Washington (Gr. Wash), 32\% in New York, 28\% in Cleveland, 27\% in both Miami (Miami Beach) and Miami (Russell), 23\% in West Palm Beach (Kaplan), 20\% in West Palm Beach (Boynton), 19\% in South Palm Beach, 17\% in Broward (Posnack), 14\% in Washington (NOVA), and 5\% in Broward (Soref). The 21\% compares to 34\% in 2004 and $30 \%$ in 1994. The $21 \%$ compares to $34 \%$ nationally for any JCC.

Table 7-36 shows that the 13\% who participated in a JCC program in the past year without being a member is about average among about 45 comparison JCCs and compares to 35\% in Washington (DCJCC), 27\% in Washington (Gr. Wash), 17\% in Miami (Russell), 16\% in West Palm Beach (Kaplan), 15\% in both South Palm Beach and West Palm Beach (Boynton), 11\% in both Broward (Posnack) and Miami (Miami Beach), 9\% in both Cleveland and Washington (NOVA), and 4\% in Broward (Soref). The 13\% compares to 20\% in 2004 and $17 \%$ in 1994. The $13 \%$ compares to $16 \%$ nationally for any JCC.

## Galbut Family Miami Beach JCC

Table 7-35 shows that the $27 \%$ who participated in a JCC program in the past year is below average among about 50 comparison JCCs and compares to $44 \%$ in Washington (DCJCC), 38\% in Washington (Gr. Wash), 32\% in New York, 28\% in Cleveland, 27\% in Miami (Russell), 23\% in West Palm Beach (Kaplan), 21\% in Miami (Alper), 20\% in West Palm Beach (Boynton), 17\% in Broward (Posnack), 14\% in Washington (NOVA), and 5\% in Broward (Soref). The $27 \%$ compares to $16 \%$ in 2004 and $21 \%$ in 1994. The $27 \%$ compares to $34 \%$ nationally for any JCC.

Table 7-36 shows that the 11\% who participated in a JCC program in the past year without being a member is below average among about 45 comparison JCCs and compares to 35\% in Washington (DCJCC), 27\% in Washington (Gr. Wash), 17\% in Miami (Russell), 16\% in West Palm Beach (Kaplan), 15\% in both South Palm Beach and West Palm Beach (Boynton), 13\% in Miami (Alper), 11\% in Broward (Posnack), 9\% in both Cleveland and Washington (NOVA), and 4\% in Broward (Soref). The 11\% compares to 11\% in 2004 and $18 \%$ in 1994. The $11 \%$ compares to $16 \%$ nationally for any JCC.

## Comparisons Among Population Subgroups.

## County-Wide Results for all Three JCCs Combined

Table 7-1 shows that, overall, 31\% of households participated in a JCC program in the past year. The percentage is much higher in:

- Israeli households (48\%)
- households with children (47\%)
- households earning an annual income of \$200,000 and over (41\%)
- Orthodox households (43\%)
- synagogue member households (44\%), households who attended Chabad in the past year (46\%), and Jewish organization member households (42\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (45\%) and 1-6 years (44\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (41\%)
- households who donated $\$ 100-\$ 500(47 \%)$ and $\$ 500$ and over (50\%) to the Jewish Federation in the past year

The percentage is much lower in:

- part-year households (20\%)
- households in Other North Dade (18\%) and NE South Dade (21\%)
- FSU households (9\%)
- non-elderly single households (18\%)
- intermarried households (20\%)
- JCC non-member households (21\%)
- households in which no adult attended Jewish education as a child (21\%)

## Michael Ann Russell JCC

Table 7-14 shows that, overall, 27\% of households participated in a JCC program in the past year. The percentage is much higher in:

- Hispanic households (40\%), Sephardic households (41\%), and Israeli households (47\%)
- households in residence in Miami for 0-4 years (40\%)
- households age 35-49 (40\%)
- households with children (45\%) and households with only adult children (37\%)
- households earning an annual income of \$200,000 and over (40\%)
- Orthodox households (38\%)
- synagogue member households (39\%), households who attended Chabad in the past year (47\%), and Jewish organization member households (40\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (45\%) and 1-6 years (40\%)
- households who donated \$100-\$500 (44\%) and \$500 and over (53\%) to the Jewish Federation in the past year

The percentage is much lower in:

- part-year households (15\%)
- households in Other North Dade (10\%)
- FSU households (5\%)
- non-elderly couple households (17\%) and non-elderly single households (17\%)
- intermarried households (15\%)
- households in which no adult attended Jewish education as a child (17\%)
- households in which no adult visited Israel (15\%)

## Dave and Mary Alper JCC

Table 7-15 shows that, overall, $21 \%$ of households participated in a JCC program in the past year. The percentage is much higher in:

- households in West Kendall (32\%)
- synagogue member households (31\%)
- households who donated under \$100 (33\%), \$100-\$500 (30\%), and \$500 and over (31\%) to the Jewish Federation in the past year

The percentage is much lower in:

- households in NE South Dade (7\%)
- Hispanic households (9\%) and Sephardic households (11\%)
- households in residence in Miami for 0-9 years (8\%)
- households who live in high rise buildings (8\%)
- households under age 35 (10\%)

## Galbut Family Miami Beach JCC

Table 7-16 shows that, overall, 27\% of households participated in a JCC program in the past year. The percentage is much higher in:

- households who live in single family homes (39\%)
- households with children (45\%)
- households earning an annual income of \$200,000 and over (41\%)
- Conservative households (38\%)
- households who donated $\$ 100-\$ 500$ to the Jewish Federation in the past year (40\%)

The percentage is much lower in:

- part-year households (5\%)
- households in residence in Miami for 5-9 years (17\%)
- households age 75 and over (13\%)
- elderly couple households (16\%)
- Just Jewish households (14\%)
- households in which no adult attended Jewish education as a child (13\%)

- JCC is not a full service facility.
${ }^{1}$ NJPS 2000 data are for the more Jewishly-connected sample. Both participation and membership are in any JCC, not just the local JCC.

## OVERLAP BETVEEN SYNAGOGUE AND JEWISH COMMUNITY CENTER MEMBERSHIPS

Table 7-37 shows that 7\% of Jewish households in Miami are members of both a synagogue and a Jewish Community Center (JCC); $29 \%$ are synagogue members but are not JCC members (synagogue members only); 5\% are JCC members but are not synagogue members (JCC members only); and 59\% are neither synagogue nor JCC members. The $7 \%$ who are members of both a JCC and a synagogue compares to $9 \%$ in 2004 and $6 \%$ in 1994. The $7 \%$ compares to $14 \%$ nationally. The $29 \%$ who are synagogue members only compares to $29 \%$ in 2004 and $31 \%$ in 1994. The $29 \%$ compares to $26 \%$ nationally. The 5\% who are JCC members only compares to $3 \%$ in 2004 and $2 \%$ in 1994. The $5 \%$ compares to $4 \%$ nationally. The $59 \%$ who are neither synagogue nor JCC members compares to $58 \%$ in 2004 and $61 \%$ in 1994. The $59 \%$ compares to $56 \%$ nationally.

Table $7-1$ shows that $61 \%$ of JCC members are synagogue members and $20 \%$ of synagogue members are JCC members.

For information on overlapping memberships among synagogues, the JCC, and Jewish organizations, see the "Association with the Jewish Community" section in this Chapter.

## Community Comparisons.

## Michael Ann Russell JCC

Table 7-1 shows that 7\% of households in North Dade are members of both a synagogue and a JCC; $28 \%$ are synagogue members, but are not JCC members; $4 \%$ are JCC members, but are not synagogue members; and 60\% are neither synagogue nor JCC members.

Table 7-37 shows that the 7\% who are both synagogue and JCC members is about average among about 45 comparison JCCs and compares to $13 \%$ in both Miami (Miami Beach) and Cleveland, 9\% in West Palm Beach (Kaplan), 8\% in both Atlanta and Broward (Posnack), $7 \%$ in Washington (Gr. Wash), 6\% in both South Palm Beach and Washington (DCJCC), $5 \%$ in each of Miami (Alper), West Palm Beach (Boynton) and Washington (NOVA), and 4\% in Broward (Soref). The 7\% compares to 11\% in 2004 and 5\% in 1994. The 7\% compares to $14 \%$ nationally.

The $28 \%$ who are synagogue members only is about average among about 45 comparison JCCs and compares to 38\% in Washington (Gr. Wash), 33\% in Miami (Miami Beach), 29\% in Cleveland, 28\% in West Palm Beach (Kaplan), 27\% in both Miami (Alper) and Washington (NOVA), 26\% in both South Palm Beach and Washington (DCJCC), $25 \%$ in Atlanta, 22\% in both West Palm Beach (Boynton) and Broward (Soref), and 21\% in Broward (Posnack). The $28 \%$ compares to $26 \%$ in both 2004 and 1994. The $28 \%$ compares to $26 \%$ nationally.

The $4 \%$ who are JCC members only is about average among about 45 comparison JCCs and compares to $5 \%$ in each of Miami (Alper), Cleveland, and Washington (DCJCC), 4\% in each of West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (Gr. Wash),
and Broward (Posnack), 3\% in South Palm Beach, 2\% in each of Miami (Miami Beach), Atlanta, and Washington (NOVA), and 1\% in Broward (Soref). The 4\% compares to 3\% in both 2004 and 1994. The 4\% compares to 4\% nationally.

The 60\% who are neither synagogue nor JCC members is above average among about 45 comparison JCCs and compares to 73\% in Broward (Soref), 69\% in West Palm Beach (Boynton), 67\% in both Washington (NOVA) and Broward (Posnack), 65\% in Atlanta, 64\% in South Palm Beach, 63\% in both Miami (Alper) and Washington (DCJCC), 59\% in West Palm Beach (Kaplan), $53 \%$ in Cleveland, $51 \%$ in Washington (Gr. Wash), and 48\% in Miami (Miami Beach). The 60\% compares to 61\% in 2004 and $67 \%$ in 1994. The 60\% compares to $56 \%$ nationally.

## Dave and Mary Alper JCC

Table 7-1 shows that 5\% of households in South Dade are members of both a synagogue and a JCC; $27 \%$ are synagogue members, but are not JCC members; 5\% are JCC members, but are not synagogue members; and $63 \%$ are neither synagogue nor JCC members.

Table 7-37 shows that the 5\% who are both synagogue and JCC members is the sixth lowest of about 45 comparison JCCs and compares to $13 \%$ in both Miami (Miami Beach) and Cleveland, 9\% in West Palm Beach (Kaplan), 8\% in both Atlanta and Broward (Posnack), 7\% in both Miami (Russell) and Washington (Gr. Wash), 6\% in both South Palm Beach and Washington (DCJCC), $5 \%$ in both West Palm Beach (Boynton) and Washington (NOVA), and 4\% in Broward (Soref). The 5\% compares to 9\% in 2004 and 10\% in 1994. The 5\% compares to $14 \%$ nationally.

The $27 \%$ who are synagogue members only is about average among about 45 comparison JCCs and compares to 38\% in Washington (Gr. Wash), 33\% in Miami (Miami Beach), 29\% in Cleveland, 28\% in both Miami (Russell) and West Palm Beach (Kaplan), 27\% in Washington (NOVA), 26\% in both South Palm Beach and Washington (DCJCC), 25\% in Atlanta, 22\% in both West Palm Beach (Boynton) and Broward (Soref), and 21\% in Broward (Posnack). The $27 \%$ compares to $30 \%$ in 2004 and $33 \%$ in 1994. The $27 \%$ compares to $26 \%$ nationally.

The $5 \%$ who are JCC members only is about average among about 45 comparison JCCs and compares to $5 \%$ in both Cleveland and Washington (DCJCC), $4 \%$ in each of Miami (Russell), West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (Gr. Wash), and Broward (Posnack), 3\% in South Palm Beach, 2\% in each of Miami (Miami Beach), Atlanta, and Washington (NOVA), and 1\% in Broward (Soref). The 5\% compares to 4\% in 2004 and $3 \%$ in 1994. The 5\% compares to 4\% nationally.

The $63 \%$ who are neither synagogue nor JCC members is well above average among about 45 comparison JCCs and compares to 73\% in Broward (Soref), 69\% in West Palm Beach (Boynton), 67\% in both Washington (NOVA) and Broward (Posnack), 65\% in Atlanta, $64 \%$ in South Palm Beach, 63\% in Washington (DCJCC), 60\% in Miami (Russell), 59\% in West Palm Beach (Kaplan), 53\% in Cleveland, 51\% Washington (Gr. Wash), and 48\% in Miami (Miami Beach). The 63\% compares to $56 \%$ in 2004 and $54 \%$ in 1994. The 63\% compares to $56 \%$ nationally.

## Galbut Family Miami Beach JCC

Table 7-1 shows that 13\% of households in The Beaches are members of both a synagogue and a JCC; $33 \%$ are synagogue members, but are not JCC members; $2 \%$ are JCC members, but are not synagogue members; and $48 \%$ are neither synagogue nor JCC members.

Table 7-37 shows that the $13 \%$ who are both synagogue and JCC members is about average among about 45 comparison JCCs and compares to $13 \%$ in Cleveland, $9 \%$ in West Palm Beach (Kaplan), 8\% in both Atlanta and Broward (Posnack), 7\% in both Miami (Russell) and Washington (Gr. Wash), 6\% in both South Palm Beach and Washington (DCJCC), 5\% in each of Miami (Alper), West Palm Beach (Boynton), and Washington (NOVA), and 4\% in Broward (Soref). The 13\% compares to $7 \%$ in 2004 and $2 \%$ in 1994. The $13 \%$ compares to 14\% nationally.

The 33\% who are synagogue members only is about average among about 45 comparison JCCs and compares to 38\% in Washington (Gr. Wash), 29\% in Cleveland, 28\% in both Miami (Russell) and West Palm Beach (Kaplan), 27\% in both Miami (Alper) and Washington (NOVA), $26 \%$ in both South Palm Beach and Washington (DCJCC), $25 \%$ in Atlanta, 22\% in both West Palm Beach (Boynton) and Broward (Soref), and 21\% in Broward (Posnack). The 33\% compares to $39 \%$ in 2004 and $38 \%$ in 1994. The $33 \%$ compares to $26 \%$ nationally.

The $2 \%$ who are JCC members only is about average among about 45 comparison JCCs and compares to 5\% in each of Miami (Alper), Cleveland, and Washington (DCJCC), 4\% in each of Miami (Russell), West Palm Beach (Boynton), West Palm Beach (Kaplan), Washington (Gr. Wash), and Broward (Posnack), 3\% in South Palm Beach, 2\% in both Atlanta and Washington (NOVA), and 1\% in Broward (Soref). The 2\% compares to 2\% in 2004 and $1 \%$ in 1994. The $2 \%$ compares to $4 \%$ nationally.

The 48\% who are neither synagogue nor JCC members is about average among about 45 comparison JCCs and compares to 73\% in Broward (Soref), 69\% in West Palm Beach (Boynton), $67 \%$ in both Washington (NOVA) and Broward (Posnack), $65 \%$ in Atlanta, 64\% in South Palm Beach, 63\% in both Miami (Alper) and Washington (DCJCC), 60\% in Miami (Russell), 59\% in West Palm Beach (Kaplan), 53\% in Cleveland, and 51\% Washington (Gr. Wash). The 48\% compares to 52\% in 2004 and 59\% in 1994. The 48\% compares to 56\% nationally.

* In communities with more than one JCC and where data are available for each JCC, results reflect only the memberships of households who live in the service area of each JCC.
** The JCCs are located in neighboring communities.
J JCC is not a full service facility.
${ }^{1}$ NJPS 2000 data are for the more Jewishly-connected sample.
Note: Synagogue membership includes both local and non-local synagogues where available. In some communities, mostly communities with a significant number of part-year households, membership in non-local JCCs is also included.

## Jewish Organization Membership

Table $7-1$ shows that $24 \%$ of Jewish households in Miami are members or regular participants of a Jewish organization other than a synagogue or Jewish Community Center (JCC) (Jewish organization). In querying whether anyone in the household is a member of a Jewish organization, respondents were given the examples of B'nai B'rith, The Tribe, and WIZO.

Community Comparisons. Table 7-38 shows that the $24 \%$ Jewish organization membership is below average among about 45 comparison Jewish communities and compares to $43 \%$ in West Palm Beach, $40 \%$ in South Palm Beach, 37\% in Broward, 24\% in both New York and Atlanta, 20\% in Washington, and 19\% in Cleveland. The 24\% compares to $31 \%$ in 2004 and $38 \%$ in 1994. The $24 \%$ compares to $25 \%$ nationally.

This significant decrease since 1994 occurred despite that fact that, unlike in previous Miami studies, someone who was a regular participant in a Jewish organization was "counted" as a member.

Table 7-39 shows that the 18\% Jewish organization membership among households who are neither synagogue nor JCC members is above average among about 40 comparison Jewish communities and compares to 34\% in West Palm Beach, 30\% in Broward, 28\% in South Palm Beach, 13\% in Washington, 10\% in Atlanta, and 9\% in Cleveland. The 18\% compares to $20 \%$ in 2004 and $25 \%$ in 1994. The $18 \%$ compares to $12 \%$ nationally.

Comparisons Among Population Subgroups. Table 7-1 shows that, overall, 24\% of households are Jewish organization members. The percentage is much higher in:

- part-year households (46\%)
- synagogue member households (35\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (37\%)
- households in which an adult visited Israel on a Jewish trip (39\%)
- households who donated \$100-\$500 (35\%) and \$500 and over (52\%) to the Jewish Federation in the past year

The percentage is much lower in:

- FSU households (13\%)
- conversionary in-married households (11\%) and intermarried households (13\%)
- households in which no adult visited Israel (14\%)

## Association with the Jewish Community

While synagogue membership, Jewish Community Center (JCC) membership, and Jewish organization membership often suggest different involvements in the organized Jewish community, it is useful to examine overall association with the Jewish community. Jewish households in Miami are defined as associated with the Jewish community (associated) for the purpose of this analysis if someone in the household is a member of a synagogue, a JCC, or a Jewish organization. Table 7-1 shows that, by this definition, $51 \%$ of households are associated.

Community Comparisons. Table 7-40 shows that the $51 \%$ who are associated is below average among about 45 comparison Jewish communities and compares to $57 \%$ in West Palm Beach, $54 \%$ in South Palm Beach, $52 \%$ in Cleveland, $50 \%$ in Broward, $48 \%$ in Washington, and $42 \%$ in Atlanta. The $51 \%$ compares to $54 \%$ in 2004 and $53 \%$ in 1994. The $51 \%$ compares to $51 \%$ nationally.

Comparisons Among Population Subgroups. Table 7-1 shows that, overall, $51 \%$ of households are associated. The percentage is much higher in:

- part-year households (70\%)
- households in East Kendall (65\%), North Beach (69\%), and Middle Beach (65\%)
- Sephardic households (61\%)
- households under age 35 (61\%)
- households with children (63\%) and households with only adult children (64\%)
- households earning an annual income of $\$ 200,000$ and over ( $72 \%$ )
- Orthodox households (87\%) and Conservative households (61\%)
- in-married households (62\%)
- households who attended Chabad in the past year (69\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years ( $70 \%$ ) and for $1-6$ years (61\%)
- households in which the respondent participated in a Jewish youth group as a teenager (61\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (68\%)
- households in which an adult visited Israel on a Jewish trip (72\%)
- households who donated \$100-\$500 (72\%) and \$500 and over (93\%) to the Jewish Federation in the past year

The percentage is much lower in:

- households in Other North Dade (37\%)
- FSU households (35\%)
- non-elderly single households (41\%) and elderly single households (41\%)
- households earning an annual income under $\$ 25,000(35 \%)$ and $\$ 25,000-\$ 50,000$ (39\%)
- Just Jewish households (31\%)
- intermarried households (37\%)
- synagogue non-member households (24\%) and Jewish organization non-member households (36\%)
- households in which no adult attended Jewish education as a child (40\%)
- households in which no adult visited Israel (32\%)

## Profiles of Member Households and Chabad Attendees

While Table 7-1 shows the percentages of Jewish households in each population subgroup in Miami who are members of a synagogue, a Jewish Community Center (JCC), and a Jewish organization, and who attended activities organized by Chabad in the past year. Table 7-41 shows profiles of synagogue, JCC, and Jewish organization member households and Chabad households in comparison to one another. The information has been collated here from other parts of this report to facilitate comparison between the four groups. As an example of the interpretation of this table, note that while Table 7-1 shows that $35 \%$ of households in North Dade are synagogue members, Table 7-41 shows that 53\% of synagogue member households live in North Dade.

The bolded percentages in Table 7-41 are discussed below.

## Geographic Profile

- most households in all four groups live in North Dade, which is the geographic area in which the largest percentage of households live
- a higher percentage of Hispanic, Sephardic, and Israeli households attended Chabad than for the other groups
- Chabad households are less likely to live in Miami for 20 or more years than are the other groups

## Demographic Profile

- Chabad households are more likely to be under age 35 than the other groups
- Jewish organization member households are less likely to be age 35-49 and more likely to be age 75 and over than are the other groups
- JCC member households and Chabad households are more likely to be households with children than are the other groups
- Jewish organization member households are less likely to be households with children
- Jewish organization member households and synagogue member households are more likely to be elderly couple households than are the other groups
- Chabad households are more likely to earn an annual income under \$50,000
- synagogue member and Jewish organization member households are more likely to earn an annual income of \$200,000 and over than the other groups

## Religious Profile

- Jewish respondents in Jewish organization members households are less likely to be Orthodox than are the other groups
- Jewish respondents in Chabad households are less likely to identify as Reform than are respondents in the other groups
- Jewish respondents in synagogue member households are less likely to be Just Jewish than are respondents in the other groups
- few important differences are seen in the observance of religious practices and Jewish behaviors among the four groups
- respondents in Jewish organization member households are less likely to keep a kosher home, to keep kosher in and out of the home, and to refrain from using electricity on the Sabbath
- Jewish respondents in synagogue member households are more likely to attend synagogue services once per month or more and less likely to never attend services than are respondents in the other groups

## Membership Profile

- Synagogue member households are more likely to be JCC member households than to be Jewish organization member households or Chabad households

## Formal and Informal Jewish Education of Adults

- Chabad households are more likely to contain a respondent who participated in Hillel/Chabad while in college (excluding High Holidays) than are synagogue member and JCC member households

## Familiarity with and Perception of the Jewish Federation

- respondents in Chabad households are less likely to be very familiar with the Jewish Federation than are respondents in the other groups

## Israel

- Chabad households are less likely to contain an adult who visited Israel on a Jewish trip than the other groups

## Philanthropic Profile

- Chabad households were less likely to donate and more likely not to be asked to donate to the Jewish Federation in the past year than were the other groups
- Chabad households were less likely to donate $\$ 100$ and over to the Jewish Federation in the past year than were the other groups
- Chabad households were more likely not to donate to other Jewish charities and non-Jewish charities in the past year than were the other groups

| Note: Sample sizes and numbers of households are lower for Type of Marriage (based on number of married couples), Any Adult Participated in Hillel/Chabad While in College (Excluding High Holidays) (based on number of households in which a born or raised Jewish adult attended college), and Perception of Jewish Federation (based on number of households in which the respondent is very/somewhat familiar with the Jewish Federation). In addition, sample sizes are lower for Household Income, Jewish Federation Market Segments in the Past Year, Donated to Jewish Federation in the Past Year, Donated to Other Jewish Charities in the Past Year, and Donated to Non-Jewish Charities in the Past Year due to missing responses. |  |  |  |  |

## Feel Part Of The Miami Jewish Community

〕ewish respondents in Miami were asked: "How much do you feel like you are part of the Miami Jewish community? Would you say very much, somewhat, not very much, or not at all?" Table 7-42 shows that 22\% of respondents feel very much part of the Miami Jewish community (Jewish community); $38 \%$, somewhat; $26 \%$, not very much; and $15 \%$, not at all. In total, $59 \%$ of respondents feel very much/somewhat part of the Jewish community.

Community Comparisons. Table 7-43 shows that the 59\% who feel very much/somewhat part of the Jewish community is above average among about 30 comparison Jewish communities and compares to 67\% in Cleveland, 63\% in New York, 61\% in South Palm Beach, 55\% in West Palm Beach, 51\% in Washington, and 44\% in Atlanta. The 59\% compares to $60 \%$ in 2004.

The $15 \%$ who feel not at all part of the Jewish community is the fourth lowest of about 30 comparison Jewish communities and compares to 24\% in Atlanta, 22\% in Washington, 18\% in both New York and West Palm Beach, 16\% in South Palm Beach, and 11\% in Cleveland. The $15 \%$ compares to $14 \%$ in 2004.

Comparisons Among Population Subgroups. Table 7-42 shows that, overall, 59\% of respondents feel very much/somewhat part of the Jewish community. The percentage is much higher in respondents in:

- households in North Beach (85\%) and Middle Beach (72\%)
- Sephardic households (70\%)
- households age 35-49 (73\%)
- households with children (74\%)
- households earning an annual income of \$200,000 and over (71\%)
- Orthodox households (84\%) and Conservative households (71\%)
- intermarried households with Jewish children (71\%)
- synagogue member households ( $81 \%$ ), households who attended Chabad in the past year (76\%), JCC member households (77\%), and Jewish organization member households (79\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (77\%)
- households in which the respondent participated in a Jewish youth group as a teenager (69\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (75\%)
- households in which an adult visited Israel on a Jewish trip (72\%)
- households who donated \$100-\$500 (81\%), and \$500 and over (85\%) to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- FSU households (40\%) and Holocaust survivor households (43\%)
- age 75 and over (47\%)
- Just Jewish households (41\%)
- intermarried households (48\%)
- synagogue non-member households (47\%)
- households in which no adult attended Jewish education as a child (49\%)
- households in which no adult visited Israel (47\%)

Note that $1.5 \%$ of respondents were not Jewish. In almost all of these cases, the respondent was the non-Jewish spouse, partner, or significant other of a Jewish adult. In these cases, the question reported on in this section was asked of the non-Jewish respondent on behalf of the Jewish household member (in a "proxy" fashion).

Non-Jewish household members were generally interviewed in two situations. First, in some cases, the Jewish household member would not cooperate with our survey, but the nonJewish household member would. Second, in some cases, the Jewish household member was simply unavailable at the time of the survey.

${ }^{*}$ Question was asked using the responses a lot, some, only a little, not at all.

## OVERALL INVOLVEMENT IN JEWISH ACTIVITY

Table 7-44 shows that 93\% of Jewish households in Miami are involved in Jewish activity (overall involvement) in that they either 1 are associated with the Jewish community (are members of a synagogue, a Jewish Community Center (JCC), or a Jewish organization), or (2) practice (always/usually participate in a Passover Seder, always/usually light Chanukah candles, always/usually light Sabbath candles, or keep a kosher home), or (3 contain a Jewish respondent who attends synagogue services at least once per year (other than for special occasions), or 4 donated to a Jewish charity in the past year.

Community Comparisons. Table 7-45 shows that the $93 \%$ overall involvement is about average among about 40 comparison Jewish communities and compares to $95 \%$ in both South Palm Beach and West Palm Beach, 93\% in Broward, 90\% in Washington, and 88\% in Cleveland. The 93\% compares to 95\% in both 2004 and 1994.

Comparisons Among Population Subgroups. Table 7-44 shows that, overall, overall involvement is $93 \%$ of households. The percentage is much higher in:

- part-year households (99\%)
- Israeli households (100\%)
- households under age 35 (99\%)
- households with children (99\%)
- Orthodox households (100\%) and Conservative households (99\%)
- households who attended Chabad in the past year (99\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (100\%) and for 1-6 years (100\%)
- households in which the respondent participated in a Jewish youth group as a teenager (99\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (99\%)

The percentage is much lower in:

- Just Jewish households (83\%)
- intermarried households (84\%)
- FSU households (83\%)

Impress them upon your children. Recite them when you stay at home and when you are away, when you lie down, and when you get up. (DeUTERONOMY 6:7)

## FORMAL JEWISH EDUCATION OF ADULTS

Table 8-1 shows that $77 \%$ of born or raised Jewish respondents (age 18 and over) (born Jewish respondents) in Jewish households in Miami received some formal Jewish education as children. 52\% of born Jewish respondents attended a supplemental school as children; $21 \%$ attended a Jewish day school, including $14 \%$ who attended for 7-12 years and 7\% who attended for 1-6 years; 3\% were educated in Israel; and 1\% had a tutor.

Table 8-2 repeats the two columns of Jewish day school results from Table 8-1 and totals the two columns.

Community Comparisons. Table $8-3$ shows that the $77 \%$ who received some formal Jewish education as children is about average among about 40 comparison Jewish communities and compares to $82 \%$ in Washington, $78 \%$ in Cleveland, $77 \%$ in West Palm Beach, $75 \%$ in South Palm Beach, 73\% in Broward, and 72\% in Atlanta. The 77\% compares to $76 \%$ in 2004 and $75 \%$ in 1994. The $77 \%$ compares to $73 \%$ nationally.

Table 8-4 shows that the $21 \%$ who attended a Jewish day school as a child is the second highest of about 40 comparison Jewish communities and compares to $13 \%$ in Cleveland, $11 \%$ in Atlanta, $9 \%$ in both South Palm Beach and Washington, $8 \%$ in Broward, and $5 \%$ in West Palm Beach. The $21 \%$ compares to $18 \%$ in 2004 and $14 \%$ in 1994. The $21 \%$ compares to $12 \%$ nationally.

## Received Some Formal Jewish Education as a Child

Comparisons Among Population Subgroups. Table 8-1 shows that, overall, 77\% of born Jewish respondents received some formal Jewish education as a child. The percentage is much higher for born Jewish respondents (in):

- households in South Beach (87\%)
- under age 35 (87\%)
- who are males ( $90 \%$ overall and $86 \%-94 \%$ in each age group)
- households who donated $\$ 1,000$ and over to the Jewish Federation in the past year (87\%)

The percentage is much lower for born Jewish respondents (in):

- FSU households (33\%) and Holocaust survivor households (55\%)
- age 75 and over (65\%)
- who are females age 50-64 (67\%) and age 75 and over (56\%)
- intermarried households (66\%)

## Attended a Jewish Day School as a Child for 7-12 Years

Table 8-1 shows that, overall, 14\% of born Jewish respondents attended a Jewish day school as a child for 7-12 years. The percentage is much higher for born Jewish respondents (in):

- households in North Beach (24\%)
- Hispanic households (33\%) and Israeli households (32\%)
- under age $35(27 \%)$ and age 35-49 ( $27 \%$ )
- who are males under age $35(31 \%)$ and age 35-49 ( $24 \%$ )
- who are females age $35-49$ (30\%)
- Orthodox households (48\%)
- households who attended Chabad in the past year (27\%)

The percentage is much lower for born Jewish respondents (in):

- households in West Kendall (3\%)
- who are age 75 and over (3\%)
- who are females age 75 and over ( $2 \%$ )
- Reform households (4\%)

## Attended a Jewish Day School as a Child

Table $\mathbf{8 - 2}$ shows that, overall, $21 \%$ of born Jewish respondents attended a Jewish day school as a child. The percentage is much higher for born Jewish respondents (in):

- households in North Beach (36\%) and South Beach (31\%)
- Hispanic households (44\%), Sephardic households (33\%), and Israeli households (42\%)
- under age 35 (40\%) and age 35-49 (35\%)
- who are males under age $35(41 \%)$ and age $35-49$ ( $33 \%$ )
- who are females under age 35 (37\%) and age 35-49 (38\%)
- Orthodox households (55\%)
- synagogue member households (31\%), households who attended Chabad in the past year (36\%), and JCC member households (35\%)

The percentage is much lower for born Jewish respondents (in):

- households in West Kendall (7\%)
- FSU households (10\%)
- who are age 75 and over (7\%)
- who are females age 75 and over (3\%)
- Reform households (10\%)

## Informal Jewish Education of Adults

As more concerns are raised about Jewish continuity, interest has been sparked in identifying factors which may be related to encouraging Jews to lead a "Jewish life." Thus, the three types of informal Jewish education are examined below - $\mathbf{1}$ attended or worked at a Jewish overnight camp as children, (2) participated in a Jewish youth group as teenagers, and 3 participated in Hillel/Chabad while in college (excluding High Holidays). These are then used in this and other chapters as variables to help explain differing levels of Jewish involvement as adults. The Executive Report contains a section that collates the information on the correlations of these types of informal Jewish education with Jewish identity measures. This section examines the percentage of born or raised Jewish respondents (born Jewish respondents) in Jewish households in Miami who participated in each type of informal Jewish education as a child.

## Attended or Worked at a Jewish Overnight Camp as Children

Table 8-5 shows that $33 \%$ of born Jewish respondents attended or worked at a Jewish overnight camp as children. A Jewish overnight camp is defined as one that holds religious services or has significant Jewish content.

Community Comparisons. Table 8-6 shows that the $33 \%$ who attended or worked at a Jewish overnight camp as children is about average among about 30 comparison Jewish communities and compares to 37\% in Washington, 31\% in Cleveland, 24\% in South Palm Beach, 23\% in West Palm Beach, and 17\% in Broward. The 33\% compares to $31 \%$ in 2004 and $18 \%$ in 1994. The $33 \%$ compares to $31 \%$ nationally.

Comparisons Among Population Subgroups. Table 8-5 shows that, overall, 33\% of born Jewish respondents attended or worked at a Jewish overnight camp as children. The percentage is much higher for born Jewish respondents (in):

- households in North Beach (48\%) and South Beach (48\%)
- Hispanic households (44\%)
- under age 35 ( $51 \%$ ) and age 35-49 (50\%)
- who are males under age 35 (47\%) and age 35-49 (53\%)
- who are females under age 35 (54\%) and age 35-49 (46\%)
- Orthodox households (48\%)
- households who attended Chabad in the past year (45\%) and JCC member households (45\%)
- households who donated \$1,000 and over to the Jewish Federation in the past year (45\%)

The percentage is much lower for born Jewish respondents (in):

- households in West Kendall (22\%)
- FSU households (18\%) and Holocaust survivor households (14\%)
- age 75 and over (17\%)
- who are females age 75 and over (14\%)

## Participated in a Jewish Youth Group as Teenagers

Table 8-5 shows that 42\% of born Jewish respondents regularly participated (participated) in a Jewish youth group as teenagers.

Community Comparisons. Table 8-7 shows that the $42 \%$ who participated in a Jewish youth group as teenagers is about average among about 25 comparison Jewish communities and compares to $42 \%$ in Washington, $34 \%$ in West Palm Beach, $33 \%$ in South Palm Beach, and 30\% in Broward. The 42\% compares to 43\% in 2004 and $36 \%$ in 1994. The $42 \%$ compares to $38 \%$ nationally.

Comparisons Among Population Subgroups. Table 8-5 shows that, overall, 42\% of born Jewish respondents participated in a Jewish youth group as teenagers. The percentage is much higher for born Jewish respondents (in):

- part-year households (54\%)
- Hispanic households (60\%)
- age 35-49 (53\%)
- who are females under age 35 (52\%) and age 35-49 (56\%)
- Orthodox households (59\%)
- synagogue member households (53\%), households who attended Chabad in the past year (52\%), JCC member households (55\%), and Jewish organization member households (52\%)

The percentage is much lower for born Jewish respondents (in):

- FSU households (25\%)
- age 75 and over (30\%)
- who are males and females age 75 and over (30\%)

## Participated in Hillel/Chabad While in College

Table 8-5 shows that $28 \%$ of born Jewish respondents who attended college (either a two-year or a four-year college) participated in Jewish activities (other than on High Holidays) sponsored by Jewish college groups such as Hillel or Chabad (participated in Hillel/Chabad while in college).

Community Comparisons. Table $8-8$ shows that the $28 \%$ who participated in Hillel/Chabad while in college is about average among about 25 comparison Jewish communities and compares to $36 \%$ in Washington, $25 \%$ in West Palm Beach, $24 \%$ in South Palm Beach, and 23\% in Broward. The 28\% compares to 34\% in 2004 and 31\% in 1994. The 28\% compares to 30\% nationally.

Comparisons Among Population Subgroups. Table 8-5 shows that, overall, 28\% of born Jewish respondents participated in Hillel/Chabad while in college. The percentage is much higher for born Jewish respondents (in):

- part-year households (40\%)
- households in Middle Beach (38\%)
- Israeli households (40\%)
- under age 35 (43\%) and age 35-49 (38\%)
- who are males under age 35 (42\%) and age 35-49 (46\%)
- who are females under age 35 ( $43 \%$ )
- Orthodox households (44\%)
- households who attended Chabad in the past year (43\%) and Jewish organization member households (40\%)

The percentage is much lower for born Jewish respondents in:

- FSU households (12\%) and Holocaust survivor households (8\%)
- conversionary in-married households (15\%)

## Attended Any Adult Jewish Education Program or Class, Engaged in Other Type of Jewish Study or Learning, Visited a Jewish Museum or Attended a Jewish Cultural Event In the Past Year

Table 8-9 shows that $24 \%$ of Jewish respondents in Miami attended an adult Jewish education program or class (attended adult Jewish education) in the past year. 30\% engaged in "any other type" of Jewish study or learning, and $52 \%$ visited a Jewish museum or attended a Jewish cultural event, such as a lecture by an author, a film, a play, or a musical performance in the past year.

Community Comparisons. Table 8-10 shows that the $24 \%$ who attended adult Jewish education in the past year is about average among about 25 comparison Jewish communities and compares to $33 \%$ in New York, 28\% in Washington, and 19\% in both South Palm Beach and West Palm Beach. The $24 \%$ compares to $26 \%$ in 2004. The $24 \%$ compares to $24 \%$ nationally.

## Attended Any Organized Jewish Education Program or Class in the Past Year

Comparisons Among Population Subgroups. Table 8-9 shows that, overall, 24\% of respondents attended adult Jewish education in the past year. The percentage is much higher for respondents (in):

- part-year households (43\%)
- households in North Beach (48\%) and Middle Beach (37\%)
- who are females under age 35 (34\%)
- Orthodox households (55\%)
- synagogue member households (41\%), households who attended Chabad in the past year (44\%), JCC member households (42\%), households who participated in a JCC program in the past year (39\%), and Jewish organization member households (44\%)
- households in which the respondent attended a Jewish day school for 7-12 years as children (44\%)
- households in which the respondent attended or worked at a Jewish overnight camp as children (34)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (40\%)
- households in which an adult visited Israel on a Jewish trip (35\%)
- households who donated \$100-\$500 (41\%), \$500-\$1,000 (37\%), and \$1,000 and over (50\%) to the Jewish Federation in the past year

The percentage is much lower for respondents in:

- households in Other North Dade (12\%)
- FSU households (14\%)
- Just Jewish households (14\%)
- intermarried households (11\%)
- synagogue non-member households (14\%)
- households in which no adult visited Israel (14\%)

## Engaged in Any Other Type of Jewish Study or Learning in the Past Year

Overall, 30\% of respondents engaged in any other type of Jewish study or learning in the past year. The percentage is much higher for respondents (in):

- households in North Beach (41\%) and Middle Beach (43\%)
- Israeli households (41\%)
- who are under age 35 ( $44 \%$ )
- who are males under age 35 (42\%)
- who are females under age 35 ( $45 \%$ )
- Orthodox households (59\%) and Conservative households (41\%)
- synagogue member households ( $46 \%$ ), households who attended Chabad in the past year (53\%), JCC member households (42\%), households who participated in a JCC program in the past year ( $41 \%$ ), and Jewish organization member households (47\%)
- households in which the respondent attended a Jewish day school for 7-12 years as children (50\%)
- households in which the respondent attended or worked at a Jewish overnight camp as children (43\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (49\%)
- households who donated $\$ 100-\$ 500(41 \%)$ and $\$ 1,000$ and over ( $47 \%$ ) to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- Holocaust survivor households (17\%)
- who are age 75 and over (20\%)
- who are female age 75 and over ( $17 \%$ )
- Just Jewish households (20\%)
- intermarried households (19\%)
- households in which no adult visited Israel (16\%)

## Visited a Jewish Museum or Attended a Jewish Cultural Event in the Past Year

Overall, $52 \%$ of respondents visited a Jewish museum or attended a Jewish cultural event such as a lecture by an author, a film, a play, or a musical performance in the past year. The percentage is much higher for respondents (in):

- part-year households (72\%)
- households in North Beach (69\%)
- Hispanic households (70\%) and Israeli households (66\%)
- who are female age 35-49 (62\%)
- Orthodox households (67\%) and Conservative households (64\%)
- synagogue member households ( $69 \%$ ), households who attended Chabad in the past year (70\%), JCC member households (73\%), households who participated in a JCC program in the past year (73\%), and Jewish organization member households (70\%)
- households in which the respondent attended a Jewish day school for 7-12 years as children (71\%)
- households in which the respondent attended or worked at a Jewish overnight camp as children (62\%)
- households in which the respondent participated in a Jewish youth group as a teenager (66\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (66\%)
- households in which an adult visited Israel on a Jewish trip (63\%)
- households who donated \$100-\$500 (74\%), \$500-\$1,000 (88\%), and \$1,000 and over ( $83 \%$ ) to the Jewish Federation in the past year

The percentage is much lower for respondents in:

- households in West Kendall (42\%)
- FSU households (42\%)
- Just Jewish households (40\%)
- intermarried households (37\%)
- households in which no adult visited Israel (33\%)

## RESULTS OF THE JEWISH INSTITUTIONS SURVEYJEWISH EDUCATION OF CHILDREN

Table 8-11 shows information about the Jewish education of Jewish children age 0-17 in Miami according to the Jewish Institutions Survey. These data are discussed in the appropriate sections of this Chapter. The table shows the number of:
(1) Jewish children age 0-5 who attend a Jewish preschool or child care program;
(2) Jewish children age 5-12 who attend formal Jewish education pre-b'nai mitzvah;
(3) Jewish children age 13-17 who attend formal Jewish education post-b'nai mitzvah;
4 Jewish children age 3-17 who attended or worked at a Jewish day camp this past summer (the summer of 2013); and
© Jewish children age 13-17 who participate in a Jewish teenage youth group.

## Preschool/Child Care Program Attended by Jewish Children

Table 8-12 shows that, according to the Telephone Survey, $54 \%$ (4,852 children) of Jewish children age 0-5 in Miami attend a Jewish preschool/child care program; 7\%, a non-Jewish preschool/child care program; and 39\%, do not attend a preschool/child care program. These results vary little when part-Jewish children are added.

The Jewish Preschool/Child Care Market Share (market share) © is defined as the percentage of Jewish children age 0-5 in a preschool/child care program who attend a Jewish preschool/child care program. Jewish preschool/child care programs have an 88\% market share of the preschool/child care market for Jewish children age 0-5.

Community Comparisons. Table 8-13 shows that the $54 \%$ who attend a Jewish preschool/child care program is the third highest of about 40 comparison Jewish communities and compares to $49 \%$ in Cleveland, $44 \%$ in both New York and South Palm Beach, 36\% in Broward, 34\% in West Palm Beach, 31\% in Washington, and 29\% in Atlanta. The 54\% compares to 52\% in both 2004 and 1994. The 53\% compares to 19\% nationally.

The 7\% who attend a non-Jewish preschool/child care program is the second lowest of about 40 comparison Jewish communities and compares to 45\% in Atlanta, 40\% in Washington, 36\% in West Palm Beach, 30\% in Broward, 23\% in South Palm Beach, 13\% in New York, and 11\% in Cleveland. The 7\% compares to 14\% in 2004 and 11\% in 1994. The $7 \%$ compares to $34 \%$ nationally.

The $39 \%$ who do not attend a preschool/child care program is about average among about 40 comparison Jewish communities and compares to 43\% in New York, 39\% in Cleveland, 34\% in Broward, 33\% in South Palm Beach, 30\% in West Palm Beach, 29\% in Washington, and 25\% in Atlanta. The 39\% compares to 34\% in 2004 and 39\% in 1994. The $39 \%$ compares to $47 \%$ nationally.

The $88 \%$ market share is the third highest of about 40 comparison Jewish communities and compares to $81 \%$ in Cleveland, $78 \%$ in New York, $65 \%$ in South Palm Beach, $55 \%$ in Broward, 49\% in West Palm Beach, 44\% in Washington, and 39\% in Atlanta. The 88\% compares to $79 \%$ in 2004 and $82 \%$ in 1994. The $88 \%$ compares to $36 \%$ nationally.

## Jewish Institutions Survey

Table 8-11 shows that, according to the Synagogue Survey, 1,464 Jewish children age 0-5 attend a preschool/child care program at a synagogue, of whom $18 \%$ attend an Orthodox synagogue (including 4\% at an Orthodox-General synagogue and 14\% at Chabad), 41\% attend at a Conservative synagogue, and $41 \%$ attend at a Reform synagogue.

According to the JCC Survey, 256 Jewish children age 0-5 attend a preschool/child care program at either the Michael-Ann Russell JCC (140 children) or the Dave and Mary Alper JCC (116 children). The Galbut Family Miami Beach JCC does not operate a preschool.

According to the Jewish Day School Survey, 420 Jewish children age 0-5 attend a preschool/child care program at a Jewish day school.

According to the Jewish Institutions Survey, in total, 2,140 Jewish children age 0-5 attend a Jewish preschool/child care program, of whom $68 \%$ attend at a synagogue; 12\%, at a JCC; and 20\%, at a Jewish day school.

A total of 9,053 Jewish children age 0-5 live in Miami. (Counting only those age 5 who are in preschool and not in kindergarten reduces this number to 8,610 Jewish children.)

Thus, according to the Jewish Institutions Survey, 25\% of Jewish children age 0-5 attend a Jewish preschool/child care program, including $17 \%$ who attend at a synagogue; $3 \%$, at a JCC; and 5\%, at a Jewish day school.

The $25 \%$ who attend a Jewish preschool/child care program, according to the Jewish Institutions Survey, is not within the margin of error of the $54 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Institutions Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who attend a Jewish preschool/child care program constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, the Telephone Survey estimate of the number of Jewish children age 0-5 may be too high, resulting in a lower calculated percentage according to the Jewish Institutions Survey.

Comparisons Among Population Subgroups. Table 8-12 shows that, overall, 54\% of Jewish children age 0-5 attend a Jewish preschool/child care program. The percentage is much higher in:

- Orthodox households (67\%)

The percentage is much lower in:

- households earning an annual income of under \$100,000 (43\%)
- Reform households (41\%)
- synagogue non-member households (39\%)

Jewish children age 5 who already attend kindergarten are excluded from these results and are included in the results for Jewish children age 5-17 in the "Type of School Attended by Jewish Children" section in this Chapter.

Note: Sample sizes for this table are generally small and only differences in results that are at least 20 percentage points apart should be treated as important.
Note: See page 8-45 for an explanation of $\mathbf{0}$.

## Type of School Attended by Jewish Children

## Jewish Children Age 5-17

Table 8-14 shows that, according to the Telephone Survey, 46\% (6,271 children) of Jewish children age 5-17 in Miami attend a Jewish day school; 11\%, a non-Jewish private school; and 42\%, a public school. These results vary little when part-Jewish children are added.

Note that, in 2011, Florida was $38^{\text {th }}$ among the states in spending per pupil in public schools.

The Jewish Day School Market Share (market share) © is defined as the percentage of Jewish children in a private school who attend a Jewish day school. Jewish day schools have an $81 \%$ market share of the private school market for Jewish children age 5-17. Market shares are generally calculated from small sample sizes and the results should be treated with caution.

Community Comparisons. Table 8-15 shows that the $46 \%$ who attend a Jewish day school is the third highest of about 45 comparison Jewish communities and compares to 63\% in New York, 26\% in Cleveland, 19\% in South Palm Beach, 14\% in Washington, 13\% in Broward, 12\% in Atlanta, and 7\% in West Palm Beach. The 46\% compares to 39\% in 2004 and $24 \%$ in 1994. The $46 \%$ compares to $22 \%$ nationally.

The $11 \%$ who attend a non-Jewish private school is about average among about 45 comparison Jewish communities and compares to $16 \%$ in South Palm Beach, 15\% in Washington, $11 \%$ in each of Atlanta, West Palm Beach, and Broward, $8 \%$ in Cleveland, and $7 \%$ in New York. The $11 \%$ compares to $13 \%$ in 2004 and $11 \%$ in 1994. The $11 \%$ compares to $10 \%$ nationally.

The $43 \%$ who attend a public school is the third lowest of about 45 comparison Jewish communities and compares to $82 \%$ in West Palm Beach, $77 \%$ in Atlanta, $76 \%$ in Broward, $71 \%$ in Washington, $66 \%$ in South Palm Beach, $65 \%$ in Cleveland, and $30 \%$ in New York. The $43 \%$ compares to $48 \%$ in 2004 and $65 \%$ in 1994. The $43 \%$ compares to $68 \%$ nationally.

The $81 \%$ market share is the seventh highest of about 45 comparison Jewish communities and compares to $90 \%$ in New York, $77 \%$ in Cleveland, $55 \%$ in Broward, $54 \%$ in South Palm Beach, 50\% in Atlanta, 49\% in Washington, and 39\% in West Palm Beach. The $81 \%$ compares to $75 \%$ in 2004 and $69 \%$ in 1994. The $81 \%$ compares to $68 \%$ nationally.

## Jewish Institutions Survey

Table 8-11 shows that, according to the Jewish Day School Survey, 3,775 Jewish children age 5-17 attend a Jewish day school. A total of 13,724 Jewish children age 5-17 live in Miami, including those age 5 who are in kindergarten. Thus, according to the Jewish Day School Survey, 28\% of Jewish children age 5-17 attend a Jewish day school.

The $28 \%$ according to the Jewish Day School Survey is not within the margin of error of the $46 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Day School Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who attend a Jewish day school constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, some of the Jewish children age 5-17 who attend a Jewish day school may not attend a Jewish day school located in Miami. Third, the Telephone Survey estimate of the number of Jewish children age 5-17 may be too high, resulting in a lower calculated percentage according to the Jewish Day School Survey.

Comparisons Among Population Subgroups. Table 8-14 shows that, according to the Telephone Survey, overall, 46\% of Jewish children age 5-17 attend a Jewish day school. The percentage is much higher for Jewish children age 5-17 in:

- North Dade Core West (58\%), North Beach (83\%), and Middle Beach (67\%)
- households earning an annual income under \$50,000 (68\%)
- Orthodox households (90\%)
- households who attended Chabad in the past year (59\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (70\%)

The percentage is much lower for Jewish children age 5-17 in:

- North Dade Core East (33\%), West Kendall (14\%), and East Kendall (34\%)
- households earning an annual income of \$50,000-\$100,000 (32\%) and \$100,000-\$200,000 (34\%)
- Reform households (22\%) and Just Jewish households (15\%)
- conversionary in-married households (14\%) and intermarried households (20\%)
- synagogue non-member households (29\%) and households who did not participate in Chabad in the past year (32\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (26\%), households in which the respondent attended a supplemental school as a child (28\%), and households in which the respondent did not attend Jewish education as a child (36\%)
- households in which no adult visited Israel (19\%)

## Jewish Children Age 5-12

Table 8-14 shows that, according to the Telephone Survey, 52\% (4,094 children) of Jewish children age 5-12 attend a Jewish day school; 8\%, a non-Jewish private school; and 40\%, a public school. Jewish day schools have an $87 \%$ market share of the private school market for Jewish children age 5-12.

Community Comparisons. Table 8-16 shows that the $52 \%$ who attend a Jewish day school is the third highest of about 40 comparison Jewish communities and compares to 68\% in New York, 29\% in Cleveland, 22\% in South Palm Beach, 17\% in Atlanta, 16\% in Broward, 15\% in Washington, and 12\% in West Palm Beach. The 52\% compares to 46\% in 2004 and $29 \%$ in 1994. The 52\% compares to $25 \%$ nationally.

The $8 \%$ who attend a non-Jewish private school is about average among about 40 comparison Jewish communities and compares to $15 \%$ in both South Palm Beach and Washington, $13 \%$ in both West Palm Beach and Broward, 8\% in Atlanta, 6\% in New York, and $5 \%$ in Cleveland. The $8 \%$ compares to $10 \%$ in 2004 and $7 \%$ in 1994. The $8 \%$ compares to $10 \%$ nationally.

The $40 \%$ who attend a public school is the third lowest of about 40 comparison Jewish communities and compares to $76 \%$ in West Palm Beach, $75 \%$ in Atlanta, $71 \%$ in Broward, 70\% in Washington, 66\% in Cleveland, 63\% in South Palm Beach, and 26\% in New York. The $40 \%$ compares to $44 \%$ in 2004 and $63 \%$ in 1994. The $40 \%$ compares to $66 \%$ nationally.

The $87 \%$ market share is the fifth highest of about 40 comparison Jewish communities and compares to $92 \%$ in New York, $85 \%$ in Cleveland, $67 \%$ in Atlanta, $59 \%$ in South Palm Beach, $56 \%$ in Broward, $50 \%$ in Washington, and $47 \%$ in West Palm Beach. The $87 \%$ compares to $82 \%$ in 2004 and $81 \%$ in 1994. The $87 \%$ compares to $72 \%$ nationally.

Jewish Institutions Survey. Table 8-11 shows that, according to the Jewish Day School Survey, 2,726 Jewish children age 5-12 attend a Jewish day school. A total of 7,874 Jewish children age 5-12 live in Miami. Thus, according to the Jewish Day School Survey, $35 \%$ ( 2,726 children) of Jewish children age 5-12 attend a Jewish day school.

The 35\% according to the Jewish Day School Survey is not within the margin of error of the 52\% according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Day School Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who attend a Jewish day school constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, some of the Jewish children age 5-12 who attend a Jewish day school may not attend a Jewish day school located in Miami. Third, the Telephone Survey estimate of the number of Jewish children age 5-12 may be too high, resulting in a lower calculated percentage according to the Jewish Day School Survey.

The actual number of Jewish children age 5-12 who attended Jewish day school in Miami decreased from 2,909 students in 2004 to 2,726 students in 2014.

## Jewish Children Age 13-17

Table 8-14 shows that, according to the Telephone Survey, $37 \%$ (2,147 children) of Jewish children age 13-17 attend a Jewish day school; 15\%, a non-Jewish private school; and $49 \%$, a public school. Jewish day schools have a $71 \%$ market share of the private school market for Jewish children age 13-17.

Community Comparisons. Table $\mathbf{8 - 1 7}$ shows that the $37 \%$ who attend a Jewish day school is the third highest of about 40 comparison Jewish communities and compares to 57\% in New York, 26\% in Cleveland, 14\% in South Palm Beach, 13\% in Washington, 10\% in Broward, $7 \%$ in Atlanta, and 1\% in West Palm Beach. The 37\% compares to 30\% in 2004 and 21\% in 1994.

The $15 \%$ who attend a non-Jewish private school is above average among about 40 comparison Jewish communities and compares to $16 \%$ in South Palm Beach, 15\% in Washington, 14\% in Atlanta, 11\% in Cleveland, 8\% in both New York and Broward, and $7 \%$ in West Palm Beach. The 15\% compares to 18\% in 2004 and 16\% in 1994.

The $49 \%$ who attend a public school is the third lowest of about 40 comparison Jewish communities and compares to $92 \%$ in West Palm Beach, $83 \%$ in Broward, $79 \%$ in Atlanta, $71 \%$ in Washington, $70 \%$ in South Palm Beach, $63 \%$ in Cleveland, and 35\% in New York. The 49\% compares 52\% in 2004 and 63\% in 1994.

The $71 \%$ market share is well above average among about 40 comparison Jewish communities and compares to 88\% in New York, 70\% in Cleveland, 55\% in Broward, 47\% in Washington, 45\% in South Palm Beach, 32\% in Atlanta, and 16\% in West Palm Beach. The $71 \%$ compares to $62 \%$ in 2004 and $56 \%$ in 1994.

Jewish Institutions Survey. Table 8-11 shows that a total of 5,850 Jewish children age 13-17 live in Miami. Thus, according to the Jewish Day School Survey, 18\% (1,049 children) of Jewish children age 13-17 attend a Jewish day school.

The $18 \%$ according to the Jewish Day School Survey is not within the margin of error of the $37 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Day School Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who attend a Jewish day school constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, some of the Jewish children age 13-17 who attend a Jewish day school may not attend a Jewish day school located in Miami. Third, the Telephone Survey estimate of the number of Jewish children age 13-17 may be too high, resulting in a lower calculated percentage according to the Jewish Day School Survey.

The actual number of Jewish children age 13-17 who attend Jewish day school in Miami decreased from 1,196 students in 2004 to 1,049 students in 2014.

${ }^{1}$ Excludes Jewish children age 5 who do not yet attend kindergarten.
${ }^{2}$ Sample sizes and numbers of Jewish children for the Jewish Day School Market Share column are lower than the numbers shown in the table by approximately the percentages shown in the Public School column. Thus, market shares are calculated from small sample sizes and the results should be treated with caution.
${ }^{3}$ Includes children being raised part-Jewish. All other rows include children being raised Jewish only.
Note: See page 8-52 for an explanation of $\mathbf{1}$.

## Seriously Investigate Sending Jewish Children to a Jewish Day School

Respondents in households in Miami with Jewish children and with part-Jewish children age 0-17 (none of whom currently attend a Jewish day school, have attended in the past, or will definitely attend in the future) were asked if they did or will seriously investigate sending their Jewish children or part-Jewish children to a Jewish day school.

In this section, respondents are asked about prospective behavior. In examining these results, it should be noted that some respondents have difficulty projecting their behavior and that unforeseen events may alter projected behavior. However, in the aggregate, the results are indicative of the community's propensity to send Jewish children to a Jewish day school.

Table 8-18 shows that $27 \%$ of households with Jewish children age 0-17 currently have a Jewish child who attends a Jewish day school; 8\% sent a Jewish child to a Jewish day school in the past; $14 \%$ (households with Jewish children age 0-5) will definitely send a Jewish child to a Jewish day school in the future; 11\% (households with Jewish school age children) seriously investigated sending a Jewish child to a Jewish day school in the past; $16 \%$ (households with Jewish children age 0-5) will seriously investigate sending a Jewish child to a Jewish day school in the future; 18\% (households with Jewish school age children) did not seriously investigate sending a Jewish child to a Jewish day school in the past; and 6\% (households with Jewish children age 0-5) will not seriously investigate sending a Jewish child to a Jewish day school in the future. The $24 \%$ of households with Jewish children age 0-17 who did not or will not seriously investigate sending a Jewish child to a Jewish day school are not in the Jewish day school market. These results vary little when households with part-Jewish children are added.
Community Comparisons. Table 8-20 shows that the $24 \%$ not in the Jewish day school market is the lowest of about 30 comparison Jewish communities and compares to $65 \%$ in Washington, 56\% in Broward, 53\% in West Palm Beach, and 44\% in South Palm Beach. The 24\% compares to 20\% in 2004.

Comparisons Among Population Subgroups. Table 8-19 shows that, overall, 24\% of households with Jewish children age 0-17 are not in the Jewish day school market. The percentage is much higher in:

- Just Jewish households (35\%)
- households in which no adult visited Israel (40\%)

The percentage is much lower in:

- households in North Dade Core West (13\%) and Middle Beach (12\%)
- Orthodox households (1\%)
- households who attended Chabad in the past year (13\%)
- households in which the respondent attended a Jewish day school for 7-12 years as a child (36\%)
- households who donated $\$ 100-\$ 500$ to the Jewish Federation in the past year (19\%)

Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

## MAJor Reasons for Not Sending Jewish Children to a Jewish Day School

Respondents in households in Miami with Jewish children age 0-17 (none of whom currently attend a Jewish day school, have attended in the past, or will definitely attend in the future) were asked the major reasons they did not, will not, or might not send their Jewish children to a Jewish day school. Possible responses were not read to the respondent. Rather, the question was open-ended whereby the respondent had to compose his/her own response. Note that respondents could provide more than one major reason.

Table 8-21 shows that the major reasons for not sending Jewish children age 0-17 to a Jewish day school most commonly reported are tuition cost (45\%), belief in public schools/ethnically mixed environment (11\%), distance from home (10\%), school is too religious for family/family is not religious (8\%), quality of education at Jewish day schools ( $7 \%$ ), quality of other private or public schools (6\%), curriculum issues (5\%), and no acceptable high school options (3\%).

Community Comparisons. Table $\mathbf{8 - 2 2}$ shows that the $45 \%$ who reported tuition cost is the third highest of about 30 comparison Jewish communities and compares to $57 \%$ in West Palm Beach, 47\% in Broward, 44\% in South Palm Beach, and 23\% in Washington. The 45\% compares to 45\% in 2004.

Table 8-23 shows that the 11\% who reported belief in public schools/ethnically mixed environment is the second lowest of about 30 comparison Jewish communities and compares to $41 \%$ in both South Palm Beach and Washington, 29\% in West Palm Beach, and $16 \%$ in Broward. The 11\% compares to 23\% in 2004.

Table 8-24 shows that the $10 \%$ who reported distance from home is about average among about 30 comparison Jewish communities and compares to 20\% in West Palm Beach, 14\% in Washington, 11\% in Broward, and 6\% in South Palm Beach. The 10\% compares to 8\% in 2004.

Table 8-25 shows that the 8\% who reported school is too religious for family/family is not religious is about average among about 30 comparison Jewish communities and compares to $17 \%$ in South Palm Beach, 10\% in West Palm Beach, 8\% in Broward, and $7 \%$ in Washington. The 8\% compares to 6\% in 2004.

Table 8-26 shows that the 7\% who reported quality of education at Jewish day schools is about average among about 30 comparison Jewish communities and compares to 8\% in South Palm Beach, $7 \%$ in both Washington and Broward, and 1\% in West Palm Beach. The $7 \%$ compares to $8 \%$ in 2004.

Table 8-27 shows that the $6 \%$ who reported quality of other private or public schools is average among about 30 comparison Jewish communities and compares to $14 \%$ in West Palm Beach, $8 \%$ in Washington, $7 \%$ in South Palm Beach, and $4 \%$ in Broward. The $6 \%$ compares to $11 \%$ in 2004.

Table 8-28 shows that the $1 \%$ who reported have a special needs child is about average among about 30 comparison Jewish communities and compares to 3\% in Broward, 2\% in both West Palm Beach and Washington, and 1\% in South Palm Beach. The 1\% compares to $2 \%$ in 2004.

Table 8 -29 shows that the $0 \%$ who reported intermarriage is about average among about 30 comparison Jewish communities and compares to 4\% in Broward, 3\% in both South Palm Beach and West Palm Beach, and 2\% in Washington. The 0\% compares to 2\% in 2004.

## SERIOUSLY INVESTIGATE SENDING JEWISH CHILDREN TO A NEW NON-ORTHODOX Jevvish High School in Your Area of Miami

Respondents in households in Miami with Jewish children age 0-17 (who currently or previously had a child in a Jewish day school) were asked if they would seriously investigate sending their Jewish children to a new non-Orthodox community Jewish high school in their area of Miami.

In this section, respondents are asked about prospective behavior. In examining these results, it should be noted that some respondents have difficulty projecting their behavior and that unforeseen events may alter projected behavior. However, in the aggregate, the results are indicative of the community's propensity to send Jewish children to a Jewish high school.

Table 8-30 shows that 32\% of respondents in households in which a child currently attends or previously attended a Jewish day school would definitely seriously investigate sending their Jewish children to a new non-Orthodox Jewish high school in their area of Miami; $24 \%$, probably, $17 \%$, probably not; and 27\%, definitely not.

Thus, about 1,364 households would definitely seriously investigate a new non-Orthodox high school and 1,022 would probably seriously investigate a new non-Orthodox Jewish high school.

Comparisons Among Population Subgroups. Table 8-30 shows that, overall, 32\% of respondents would definitely seriously investigate sending their Jewish children to a new non-Orthodox Jewish high school in their area of Miami. The percentage is much higher in:

- North Dade Core East (46\%)
- Sephardic households (46\%) and Israeli households (53\%)

The percentage is much lower for Jewish children age 5-17 in:

- households in North Dade Core West (9\%)
- Orthodox households (19\%)
- Jewish organization member households (21\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (17\%)

# Current Formal Jewish Education OF JEWISH CHILDREN 

## Jewish Children Age 5-17

Table 8-31 shows that, according to the Telephone Survey, 59\% (8,029 children) of Jewish children age 5-17 in Miami currently attend formal Jewish education, including $13 \%$ at a supplemental school and $46 \%$ at a Jewish day school. These results vary little when part-Jewish children are added.

Comparisons Among Population Subgroups. Table 8-31 shows that, overall, 59\% of Jewish children age 5-17 currently attend formal Jewish education. The percentage is much higher for Jewish children age 5-17 in:

- North Dade Core West (72\%), North Beach (83\%), and Middle Beach (76\%)
- the age 5-12 group (71\%)
- households earning an annual income under \$50,000 (72\%) and \$200,000 and over (76\%)
- Orthodox households (97\%)
- synagogue member households (78\%), households who attended Chabad in the past year (73\%), JCC member households (73\%), and Jewish organization member households (74\%)
- households in which the respondent attended a Jewish day school for 7-12 years as a child (81\%)
- households in which the respondent attended or worked at a Jewish overnight camp as a child (69\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (73\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (72\%)

The percentage is much lower for Jewish children age 5-17 in:

- households in West Kendall (36\%)
- the age $13-17$ group ( $43 \%$ )
- households earning an annual income of \$50,000-\$100,000 (45\%)
- Reform households (47\%) and Just Jewish households (29\%)
- conversionary in-married households (38\%) and intermarried households (42\%)
- synagogue non-member households (30\%) and households who did not attend Chabad in the past year (47\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years ( $41 \%$ ) and households in which the respondent did not attend Jewish education as a child (45\%)
- households in which no adult visited Israel (27\%)

## Jewish Children Age 5-12 (Pre-B'nai Mitzvah)

Table 8-31 shows that, according to the Telephone Survey, $71 \%$ ( 5,606 children) of Jewish children age 5-12 currently attend formal Jewish education, including 19\% at a supplemental school and $52 \%$ at a Jewish day school.

Jewish Institutions Survey. Table 8-11 shows that, according to the Synagogue Survey, 1,555 Jewish children age $5-12$ attend a supplemental school, of whom $23 \%$ attend at an Orthodox synagogue; $23 \%$, at a Conservative synagogue; $53 \%$, at a Reform synagogue; and $1 \%$, at other synagogues.

According to the Jewish Day School Survey, 2,726 Jewish children age 5-12 attend a Jewish day school.

According to the Jewish Institutions Survey, in total, 4,281 Jewish children age 5-12 currently attend formal Jewish education, of whom $36 \%$ attend a supplemental school and $64 \%$, a Jewish day school.

A total of 7,874 Jewish children age 5-12 live in Miami, including those age 5 who are in kindergarten. Thus, according to the Jewish Institutions Survey, $54 \%$ of Jewish children age 5-12 currently attend formal Jewish education, including $20 \%$ who attend a supplemental school and $35 \%$, a Jewish day school. $46 \%$ ( 3,593 children) of Jewish children age 5-12 do not currently attend formal Jewish education.

The $54 \%$ who currently attend formal Jewish education according to the Jewish Institutions Survey is not within the margin of error of the $71 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Institutions Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who currently attend formal Jewish education constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, some of the Jewish children age 5-12 who currently attend formal Jewish education may not attend at a Jewish institution located in Miami. Third, the Telephone Survey estimate of the number of Jewish children age 5-12 may be too high, resulting in a lower calculated percentage according to the Jewish Institutions Survey.

Community Comparisons. Table 8-32 shows that the $54 \%$ who currently attend formal Jewish education according to the Jewish Institutions Survey is below average among about 35 comparison Jewish communities and compares to $56 \%$ in both South Palm Beach and Washington, 46\% in West Palm Beach, and 45\% in Broward. The 54\% compares to $56 \%$ in 2004 and $51 \%$ in 1994. The $54 \%$ compares to $76 \%$ nationally.

The $71 \%$ who currently attend formal Jewish education according to the Telephone Survey is about average among about 20 comparison Jewish communities and compares to $90 \%$ in New York and $81 \%$ in Cleveland. The $71 \%$ compares to $76 \%$ nationally.

## Jewish Children Age 13-17 (Post-B'nai Mitzvah)

Table 8-31 shows that, according to the Telephone Survey, 43\% (2,527 children) of Jewish children age 13-17 currently attend formal Jewish education, including 7\% at a supplemental school and $37 \%$ at a Jewish day school.

Jewish Institutions Survey. Table 8-11 shows that, according to the Synagogue Survey, 324 Jewish children age 13-17 attend a supplemental school at a synagogue, of whom $18 \%$ attend at an Orthodox synagogue; $8 \%$, at a Conservative synagogue; $1 \%$, at a Reconstructionist synagogue; 72\%, at a Reform synagogue, and 1\%, at other synagogues.

According to the Jewish Day School Survey, 1,049 Jewish children age 13-17 attend a Jewish day school.

According to the Jewish Institutions Survey, in total, 1,373 Jewish children age 13-17 currently attend formal Jewish education, of whom $24 \%$ attend a supplemental school, and $76 \%$, a Jewish day school.

A total of 5,850 Jewish children age 13-17 live in Miami. Thus, according to the Jewish Institutions Survey, 23\% of Jewish children age 13-17 currently attend formal Jewish education, including 4\% who attend a supplemental school; and 18\%, a Jewish day school. $77 \%$ ( 4,477 children) of Jewish children age 13-17 do not currently attend formal Jewish education.

The $23 \%$ who currently attend formal Jewish education according to the Jewish Institutions Survey is not within the margin of error of the $43 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Institutions Survey? First, not all potential respondents cooperated with the Telephone Survey, and it is likely that households with Jewish children who currently attend formal Jewish education constituted a disproportionately high percentage of households who responded to the Telephone Survey. Second, some of the Jewish children age 13-17 who currently attend formal Jewish education may not attend at a Jewish institution located in Miami. Third, the Telephone Survey estimate of the number of Jewish children age 13-17 may be too high, resulting in a lower calculated percentage according to the Jewish Institutions Survey.

Community Comparisons. Table 8 - $\mathbf{3 2}$ shows that the $23 \%$ who currently attend formal Jewish education according to the Jewish Institutions Survey is below average among about 35 comparison Jewish communities and compares to $31 \%$ in Washington, 22\% in South Palm Beach, and $16 \%$ in West Palm Beach and Broward. The 23\% compares to $31 \%$ in 2004 and $24 \%$ in 1994. The $23 \%$ compares to $68 \%$ nationally.

The $43 \%$ who currently attend formal Jewish education according to the Telephone Survey is below average among about 20 comparison Jewish communities and compares to $73 \%$ in New York and $69 \%$ in Cleveland. The $43 \%$ compares to $68 \%$ nationally. However, the national results for Jewish children age 13-17 seem unrealistic to this researcher, even for the more Jewishly-connected sample for which these data are available.

## Retention Rate

Table 8-32 shows the retention rate © which is defined as the percentage of Jewish students age 5-12 who continue their formal Jewish education after their b'nai mitzvah. This is calculated by dividing the percentage of Jewish children age 13-17 who currently attend formal Jewish education by the percentage of Jewish children age 5-12 who currently attend formal Jewish education.

Table 8-32 shows that, according to the Telephone Survey, the retention rate in Miami is 61\% (43\% divided by 71\%).

Jewish Institutions Survey. Table 8-32 shows that, according to the Jewish Institutions Survey, the retention rate is $43 \%$ ( $54 \%$ divided by $23 \%$ ).

The 43\% according to the Jewish Institutions Survey is not within the margin of error of the 61\% according to the Telephone Survey.

Community Comparisons. Table $\mathbf{8 - 3 2}$ shows that the $43 \%$ retention rate according to the Jewish Institutions Survey is about average among about 35 comparison Jewish communities and compares to 56\% in Washington, 40\% in South Palm Beach, 37\% in Broward, and $36 \%$ in West Palm Beach. The $43 \%$ compares to $56 \%$ in 2004 and $47 \%$ in 1994. The $43 \%$ compares to $89 \%$ nationally.

The 61\% retention rate according to the Telephone Survey is below average among about 20 comparison Jewish communities and compares to $85 \%$ in Cleveland and $81 \%$ in New York. The $61 \%$ compares to $89 \%$ nationally. However, the national results for Jewish children age 13-17 who currently attend formal Jewish education, and hence the national results for the retention rate as calculated, seem unrealistic to this researcher, even for the more Jewishly-connected sample for which these data are available.

Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

Jewish children age 5 who do not yet attend kindergarten are excluded from these results.

## Jewish Children Who Have Ever Attended FORMAL JEWISH EdUCATION

Table 8-33 shows that 81\% (11,130 children) of Jewish children age 5-17 in Miami have received some formal Jewish education (either currently attend or have attended in the past), including $24 \%$ at a supplemental school and $58 \%$ at a Jewish day school. Note that Jewish children who attended both a Jewish day school and a supplemental school are included in the Jewish day school results. These results vary little when part-Jewish children are added.

82\% (4,815 children) of Jewish children age 13-17 have received some formal Jewish education, including $27 \%$ at a supplemental school and $56 \%$ at a Jewish day school. The interest in this age group is that, since very few Jewish children are enrolled in formal Jewish education for the first time at age 13 or older, it suggests that $18 \%$ of Jewish children in Miami will not receive any formal Jewish education.

Community Comparisons. Table 8-34 shows that the $81 \%$ of Jewish children age 5-17 who have received some formal Jewish education is about average among about 50 comparison Jewish communities and compares to $89 \%$ in Cleveland, $84 \%$ in Washington, $80 \%$ in Atlanta, $76 \%$ in South Palm Beach, $70 \%$ in Broward, and $63 \%$ in West Palm Beach. The $81 \%$ compares to $86 \%$ in 2004 and $80 \%$ in 1994. The $81 \%$ compares to $79 \%$ nationally.

Table 8-35 shows that the $82 \%$ of Jewish children age 13-17 who have received some formal Jewish education is about average among about 40 comparison Jewish communities and compares to 97\% in Cleveland, 96\% in New York, 94\% in Atlanta, 93\% in Washington, $84 \%$ in South Palm Beach, $75 \%$ in Broward, and 62\% in West Palm Beach. The 82\% compares to 87\% in 2004 and 82\% in 1994.

## Received Some Formal Jewish Education

Comparisons Among Population Subgroups. Table 8-33 shows that, overall, $81 \%$ of Jewish children age 5-17 have received some formal Jewish education. The percentage is much higher for Jewish children age 5-17 in:

- households in East Kendall (95\%)
- households earning an annual income of \$200,000 and over (92\%)
- Orthodox households (98\%)
- synagogue member households (95\%) and Jewish organization member households (92\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (88\%)
- households in which an adult visited Israel on a Jewish trip (91\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (94\%)

The percentage is much lower for Jewish children age 5-17 in:

- households in West Kendall (70\%)
- Hispanic households (71\%)
- households earning an annual income of \$50,000-\$100,000 (65\%)
- Just Jewish households (66\%)
- synagogue non-member households (59\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (65\%) and households in which the respondent did not attend Jewish education as a child (50\%)
- households in which no adult visited Israel (71\%)
- households who were not asked to donate to the Jewish Federation in the past year (57\%)

## Ever Attended a Jewish Day School

Table 8-33 shows that, overall, 58\% of Jewish children age 5-17 have ever attended a Jewish day school. The percentage is much higher for Jewish children age 5-17 in:

- households in Middle Beach (79\%)
- Israeli households (68\%)
- households earning an annual income under \$50,000 (72\%) and \$200,000 and over (69\%)
- Orthodox households (92\%)
- synagogue member households (69\%), households who attended Chabad in the past year (71\%), and JCC member households (68\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (75\%)
- households who declined to donate to the Jewish Federation when asked in the past year (72\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (73\%)

The percentage is much lower for Jewish children age 5-17 in:

- households in West Kendall (41\%) and East Kendall (48\%)
- households earning an annual income of \$50,000-\$100,000 (37\%)
- Reform households (38\%) and Just Jewish households (37\%)
- conversionary in-married households (32\%) and intermarried households (38\%)
- synagogue non-member households (39\%) and households who attended Chabad in the past year (44\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (37\%), households in which the respondent attended a supplemental school as a child (44\%), and households in which the respondent did not attend Jewish education as a child (42\%)
- households in which no adult visited Israel (28\%)
- households who were not asked to donate to the Jewish Federation in the past year (48\%)
- households who donated under \$100 to the Jewish Federation in the past year (46\%)

Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

Jewish children age 5 who do not yet attend kindergarten are excluded from these results.

## Day Camp Attended or Worked at by Jewish Children This Past Summer

Table 8-36 shows that, according to the Telephone Survey, 37\% (6,645 children) of Jewish children age 3-17 in Miami attended or worked at a Jewish day camp this past summer (the summer of 2013); 12\%, a non-Jewish day camp; and $52 \%$ did not attend or work at a day camp. These results vary little when part-Jewish children are added.

The Jewish Day Camp Market Share (market share) © is defined as the percentage of Jewish children age 3-17 who attended or worked at a day camp this past summer who attended or worked at a Jewish day camp. Jewish day camps have a $76 \%$ market share of the day camp market for Jewish children age 3-17. Market shares are calculated from small sample sizes and the results should be treated with caution.

Community Comparisons. Table 8-37 shows that the $37 \%$ who attended or worked at a Jewish day camp this past summer is the highest of about 30 comparison Jewish communities and compares to $21 \%$ in both South Palm Beach and West Palm Beach, 17\% in Washington, and $13 \%$ in Broward. The $37 \%$ compares to $23 \%$ in 2004. The $37 \%$ compares to $27 \%$ nationally.

The $12 \%$ who attended or worked at a non-Jewish day camp this past summer is below average among about 30 comparison Jewish communities and compares to 28\% in South Palm Beach, $27 \%$ in Washington, and $20 \%$ in both West Palm Beach and Broward. The $12 \%$ compares to $11 \%$ in 2004 . The $12 \%$ compares to $21 \%$ nationally.

The $52 \%$ who did not attend or work at a day camp this past summer is the fourth lowest of about 30 comparison Jewish communities and compares to $68 \%$ in Broward, $59 \%$ in West Palm Beach, 56\% in Washington, and $51 \%$ in South Palm Beach. The 52\% compares to $66 \%$ in 2004 . The $52 \%$ compares to $52 \%$ nationally.

The $76 \%$ market share is the fifth highest of about 30 comparison Jewish communities and compares to $51 \%$ in West Palm Beach, $43 \%$ in South Palm Beach, $40 \%$ in Broward, and $39 \%$ in Washington. The $76 \%$ compares to $68 \%$ in 2004. The $76 \%$ compares to $56 \%$ nationally.

Jewish Institutions Survey. Table 8-11 shows that, according to the Synagogue Survey, 1,547 Jewish children age 3-17 attended or worked at a day camp this past summer located at a synagogue. 35\% attended or worked at an Orthodox synagogue; 32\%, at a Conservative synagogue; and $33 \%$, at a Reform synagogue.

According to the JCC Survey, 1,753 Jewish children age 3-17 attended or worked at a Jewish Community Center in Miami (JCC) day camp this past summer.

According to the Jewish Institutions Survey, in total, 3,300 Jewish children age 3-17 attended or worked at a Jewish day camp this past summer, of whom $47 \%$ attended or worked at a day camp located at a synagogue and $53 \%$, at a JCC.

A total of 18,008 Jewish children age 3-17 live in Miami. Thus, according to the Jewish Institutions Survey, 18\% of Jewish children age 3-17 attended or worked at a Jewish day camp this past summer, including $9 \%$ who attended or worked at a day camp at a synagogue and $10 \%$, at a JCC.

The $18 \%$ who attended or worked at a Jewish day camp this past summer according to the Jewish Institutions Survey is not within the margin of error of the $37 \%$ according to the Telephone Survey.

Why the disparity between the Telephone Survey and the Jewish Institutions Survey? First, some Jewish children age 3-17 may have attended or worked at Jewish day camps that operate outside Miami. Second, some respondents may have interpreted "Jewish day camp" to mean a camp with mostly Jewish campers. Third, the Telephone Survey estimate of the number of Jewish children age 3-17 may be too high, resulting in a lower calculated percentage according to the Jewish Institutions Survey.

Comparisons Among Population Subgroups. Table 8-36 shows that, according to the Telephone Survey, overall, $37 \%$ of Jewish children age 3-17 attended or worked at a Jewish day camp this past summer. The percentage is much higher for Jewish children age 3-17 in:

- households in North Beach (47\%) and Middle Beach (52\%)
- the age 3-5 group (66\%)
- Orthodox households (50\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (47\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (50\%)

The percentage is much lower for Jewish children age 3-17 in:

- Other North Dade (6\%) and East Kendall (22\%)
- the age 13-17 group (15\%)
- Just Jewish households (26\%)
- intermarried households (12\%)
- synagogue non-member households (26\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (21\%)
- households in which no adult visited Israel (25\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (25\%)

## Overnight Camp Attended or Worked at by Jewish Children This Past Summer

Table $\mathbf{8 - 3 8}$ shows that $20 \%$ ( 2,618 children) of Jewish children age $6-17$ in Miami attended or worked at a Jewish overnight camp this past summer (the summer of 2013); $3 \%$, a non-Jewish overnight camp; and $78 \%$ did not attend or work at an overnight camp. These results vary little when part-Jewish children are added.

The Jewish Overnight Camp Market Share (market share) © is defined as the percentage of Jewish children age 6-17 attending or working at an overnight camp this past summer who attended or worked at a Jewish overnight camp. Jewish overnight camps have an $88 \%$ market share of the overnight camp market for Jewish children age 6-17. Market shares are calculated from small sample sizes and the results should be treated with caution.

Community Comparisons. Table 8-39 shows that the $20 \%$ who attended or worked at a Jewish overnight camp this past summer is the highest of about 30 comparison Jewish communities and compares to $14 \%$ in Washington, $11 \%$ in South Palm Beach, $9 \%$ in West Palm Beach, and $8 \%$ in Broward. The 20\% compares to $26 \%$ in 2004. The $20 \%$ compares to $20 \%$ nationally.

The $3 \%$ who attended or worked at a non-Jewish overnight camp this past summer is about average among about 30 comparison Jewish communities and compares to $12 \%$ in Washington, 6\% in both South Palm Beach and Broward, and 3\% in West Palm Beach. The $3 \%$ compares to $6 \%$ in 2004. The $3 \%$ compares to $8 \%$ nationally.

The 78\% who did not attend or work at an overnight camp this past summer is about average among about 30 comparison Jewish communities and compares to $88 \%$ in West Palm Beach, $86 \%$ in Broward, $84 \%$ in South Palm Beach, and $74 \%$ in Washington. The $78 \%$ compares to $69 \%$ in 2004. The $78 \%$ compares to $72 \%$ nationally.

The 88\% market share is the highest of 30 comparison Jewish communities and compares to $74 \%$ in West Palm Beach, $67 \%$ in South Palm Beach, $56 \%$ in Broward, and $54 \%$ in Washington. The $88 \%$ compares to $83 \%$ in 2004 . The $88 \%$ compares to $70 \%$ nationally.

Comparisons Among Population Subgroups. Table 8-38 shows that, overall, 20\% of Jewish children age 6-17 attended or worked at a Jewish overnight camp this past summer. The percentage is much higher for Jewish children age 6-17 in:

- households in Middle Beach (35\%)
- Orthodox households (34\%)

The percentage is much lower for Jewish children age 6-17 in:

- households in Other North Dade (3\%)
- households earning an annual income of $\$ 100,000-\$ 200,000$ (8\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (10\%) and households in which the respondent did not attend Jewish education as a child (4\%)
- households in which no adult visited Israel (7\%)
- households who donated under \$100 to the Jewish Federation in the past year (10\%)

Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

## Sending Child to Jewish Overnight Camp Last Summer Prevented by Cost

R
espondents in households with Jewish children age 6-17 in Miami who had not sent them to Jewish overnight camp this past summer (the summer of 2013) were asked if cost prevented them from doing so.

Table $8-40$ shows that $30 \%$ (2,976 households) of households with Jewish children age 6-17 did not send a child to a Jewish overnight camp this past summer because of the cost. These results vary little when part-Jewish children are added.

Comparisons Among Population Subgroups. Table 8-40 shows that, overall, 31\% of Jewish children age 6-17 attended or worked at a Jewish overnight camp this past summer. The percentage is much higher in:

- households earning an annual income under \$100,000 in the past year (47\%)

The percentage is much lower for households with Jewish children age 6-17 in:

- households earning an annual income of \$200,000 and over (12\%)

## PARTICIPATE IN A Jewish Teenage Youth Group

Table $8-41$ shows that, according to the Telephone Survey, $33 \%$ ( 1,919 children) of Jewish children age 13-17 in Miami regularly participate (participate) in a Jewish teenage youth group.

## Jewish Institutions Survey

Table 8-11 shows that, according to the Synagogue Survey, 671 Jewish children age 13-17 participate in a Jewish teenage youth group at a synagogue, of whom 36\% participate at an Orthodox synagogue; $42 \%$ participate at a Conservative synagogue, $1 \%$ at a Reconstructionist synagogue; 20\%, at a Reform synagogue. and $1 \%$, at other synagogues.

According to the Jewish Institutions Survey, 889 Jewish children age 13-17 participate in an independent Jewish teenage youth group.

According to the Jewish Institutions Survey, in total, 2,598 Jewish children age 13-17 participate in a Jewish teenage youth group, of whom $43 \%$ participate in a synagogue youth group and $57 \%$, in an independent youth group.

A total of 5,850 Jewish children age 13-17 live in Miami. Thus, according to the Jewish Institutions Survey, 27\% of Jewish children age 13-17 participate in a Jewish teenage youth group, including $11 \%$ who participate in a synagogue youth group and $15 \%$, in an independent youth group.

The $27 \%$ who participate in a Jewish teenage youth group according to the Jewish Institutions Survey is within the margin of error of the $33 \%$ according to the Telephone Survey.

Community Comparisons. Table $8-42$ shows that the $33 \%$ who participate in a Jewish teenage youth group according to the Telephone Survey is about average among about ten comparison Jewish communities.

Table 8 - 43 shows that the $27 \%$ who participate in a Jewish teenage youth group according to the Jewish Institutions Survey is about average among about 30 comparison Jewish communities and compares to $23 \%$ in Washington, $21 \%$ in both South Palm Beach and Broward, and $18 \%$ in West Palm Beach. The 27\% compares to $18 \%$ in 2004.

Comparisons Among Population Subgroups. Table 8-41 shows that, overall, 33\% of Jewish children age 13-17 participate in a Jewish teenage youth group. The percentage is much higher for Jewish children age 13-17 in:

- North Dade Core East (43\%)
- households earning an annual income of \$100,000-\$200,000 (44\%) and \$200,000 and over (45\%)
- synagogue member households (43\%), households who attended Chabad in the past year (49\%), and Jewish organization member households (54\%)

The percentage is much lower for Jewish children age 13-17 in:

- South Dade (23\%)
- households earning an annual income under \$100,000 (21\%)
- synagogue non-member households (21\%), households who did not attend Chabad in the past year (23\%)

Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

Note: The percentage of Jewish teenagers who participate in a Jewish youth group is based upon the number of Jewish children age 13-17 who participate according to the Jewish Institutions Survey divided by the estimated number of Jewish children age 13-17 in the local community according to the Telephone Survey.
(1) A Jewish Institutions Survey gathered information from local Jewish educational institutions.

## JEWISH CHILDREN CURRENTLY INVOLVED IN FORMAL OR INFORMAL JEWISH EdUCATION

T
able 8-44 shows that 66\% of Jewish children age 0-17 in Miami are currently involved in some type of formal or informal Jewish education in that they:
(1) currently attend a Jewish preschool/child care program;
(2) currently attend a Jewish day school;

3 currently attend a Jewish supplemental school;
(4) attended or worked at a Jewish day camp this past summer;
© attended or worked at a Jewish overnight camp this past summer; or
6 currently participate in a Jewish teenage youth group.
Community Comparisons. Table $8-45$ shows that the $66 \%$ who are currently involved in formal or informal Jewish education is about average among eight comparison Jewish communities.

Comparisons Among Population Subgroups. Table 8-44 shows that, overall, 66\% of Jewish children age 0-17 are currently involved in formal or informal Jewish education. The percentage is much higher for Jewish children age 0-17 in:

- households in North Dade Core West (77\%) and North Beach (90\%)
- Orthodox households (88\%)
- synagogue member households (79\%), JCC membership households (82\%), and Jewish organization member households (79\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (78\%)
- households who declined to donate when asked to the Jewish Federation in the past year (78\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (81\%)

The percentage is much lower for Jewish children age 0-17 in:

- Other North Dade (26\%)
- Reform households (56\%) and Just Jewish households (51\%)
- intermarried households (39\%) and conversionary in-married households (53\%)
- synagogue non-member households (46\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (52\%)
- households in which no adult attended Jewish education as a child (45\%)
- households in which no adult visited Israel (37\%)
- households who were not asked to donate to the Jewish Federation in the past year (41\%)

If a person is occupied with the needs of the community, it is as thoughhe or she were occupied with Torah.

## FAMILIARITY WITH JEWVISH AgENCIES

Respondents in Jewish households in Miami were asked whether they are very familiar, somewhat familiar, or not at all familiar with the Greater Miami Jewish Federation (Jewish Federation) and other Jewish agencies. Table 9-1 shows that, overall, a significant portion of the Miami Jewish community is not at all familiar with the Jewish Federation and other Jewish agencies, ranging from the 31\% of respondents in South Dade who are not at all familiar with the Dave and Mary Alper Jewish Community Center (JCC) to the 61\% of respondents who are not at all familiar with Jewish Community Services.

Table 9-2 shows that $86 \%$ of respondents are at least somewhat familiar with at least one of the four agencies queried of all respondents. The $86 \%$ is about average among about 35 comparison Jewish communities and compares to $87 \%$ in both West Palm Beach and Washington, 83\% in South Palm Beach, and 69\% in Broward. The 86\% compares to 87\% in both 2004 and 1994.

## PERCEPTION OF JEWISH AGENCIES

Respondents in Jewish households in Miami who are very familiar or somewhat familiar with the Greater Miami Jewish Federation (Jewish Federation) and other Jewish agencies were asked to provide perceptions of those agencies on a scale of excellent, good, fair, and poor. Note that only respondents who are very/somewhat familiar with each agency were asked to provide their perceptions of those agencies. Many respondents who are only somewhat familiar, and some respondents who are very familiar, with an agency were unable to provide a perception of that agency. Also, some respondents who provided perceptions of the agencies may have used their services recently while others have not.

Table 9-3 shows that the majority ( $84 \%-90 \%$ ) of respondents who are very/somewhat familiar with the Jewish Federation and other Jewish agencies and were able to provide a perception have positive (excellent and good) perceptions of them.

| TABLE 9-3 <br> Perception of Jewish Agencies |  |  |  |  |  |  |  |

## Michatl-Ann Russell Jewish Community Center

Familiarity with the Michael-Ann Russell Jewish Community Center

Table 9-4 shows that $32 \%$ of respondents in Jewish households in North Dade are very familiar, $35 \%$ are somewhat familiar, and $32 \%$ are not at all familiar with the MichaelAnn Russell Jewish Community Center (MARJCC). In examining these results, it should be noted that this study overestimates the true level of familiarity with the MARJCC. Some respondents provide "false positive" responses to this question, because they confuse the MARJCC with synagogues, the Jewish Federation, and other Jewish organizations.

Community Comparisons. Table $9-5$ shows that the $32 \%$ very familiar with the MARJCC is about average among about 40 comparison JCCs and compares to $44 \%$ in Washington (Gr. Wash.), 35\% in Miami (Alper), 34\% in Washington (DCJCC), 30\% in Miami (Miami Beach), 22\% in West Palm Beach (Kaplan), 19\% in Washington (NOVA), 18\% in Broward (Posnack), 15\% in South Palm Beach, 14\% in West Palm Beach (Boynton), and 8\% in Broward (Soref). The 32\% compares to 28\% in 2004 and 22\% in 1994.

The $32 \%$ not at all familiar with the MARJCC is well above average among the comparison JCCs and compares to $68 \%$ in Broward (Soref), $56 \%$ in South Palm Beach, $53 \%$ in West Palm Beach (Boynton), 43\% in Broward (Posnack), 42\% in Washington (NOVA), 41\% in Miami (Miami Beach), 39\% in West Palm Beach (Kaplan), 31\% in Miami (Alper), 15\% in Washington (DCJCC), and 14\% in Washington (Gr. Wash.) The 32\% compares to $34 \%$ in 2004 and $32 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-4 shows that, overall, 32\% of respondents are very familiar with the MARJCC. The percentage is much higher for respondents (in):

- North Dade Core West (43\%)
- age 35-49 (42\%)
- households with children (44\%) and households with only adult children (42\%)
- households earning an annual income of \$200,000 and over (44\%)
- Orthodox households (42\%)
- in-married households (45\%)
- synagogue member households (46\%), JCC member households (82\%), and Jewish organization member households (44\%)
- households who donated to the Jewish Federation in the past year (44\%)
- households who donated \$100-\$500 (46\%) and \$500 and over (53\%) to the Jewish Federation in the past year

The percentage very familiar with the MARJCC is much lower for respondents in:

- part-year households (15\%)
- Other North Dade (14\%)
- FSU households (8\%) and Holocaust survivor households (18\%)
- households in residence in Miami for 0-4 years (22\%)

Recall that the level of familiarity with the MARJCC is that of the respondent. In some cases, the respondent is not the active JCC member in the household, which helps to explain why some respondents in JCC member households are only somewhat familiar or not at all familiar with the JCC.

TABLE 9-4

3 JCC is not a full service facility.

# Michael-Ann Russell Jewish Community Center 

## PERCEPTION OF THE MICHAEL-ANN RUSSELL Jewish Community Center

Table 9-6 shows that $37 \%$ of respondents in Jewish households in North Dade (who are very familiar or somewhat familiar with the Michael-Ann Russell Jewish Community Center (MARJCC)) perceive the MARJCC as excellent; $49 \%$, good; $10 \%$, fair; and $3 \%$, poor. In total, $87 \%$ of respondents who are very familiar or somewhat familiar with the MARJCC and who were willing to provide a perception have positive (excellent + good) perceptions. Of respondents who are very familiar with the MARJCC, $46 \%$ perceive it as excellent; $40 \%$, good; $10 \%$, fair; and $5 \%$, poor.

Community Comparisons. Table 9-7 shows that the 37\% excellent perceptions of MARJCC is about average among about 40 comparison Jewish Community Centers and compares to $43 \%$ in Miami (Alper), $40 \%$ in both Broward (Posnack) and West Palm Beach (Kaplan), $39 \%$ in South Palm Beach, $37 \%$ in both Washington (DCJCC) and Broward (Soref), $35 \%$ in both Washington (Gr. Wash.) and Miami (Miami Beach), $30 \%$ in West Palm Beach (Boynton), and 24\% in Washington (NOVA). The 37\% compares 35\% in 2004 and $27 \%$ in 1994.

The $13 \%$ fair/poor perceptions of MARJCC is about average among about 40 comparison Jewish Community Centers and compares to $12 \%$ in West Palm Beach (Kaplan), $11 \%$ in Miami (Miami Beach), 10\% in each of Broward (Soref), Miami (Alper), Broward (Posnack), and Washington (Gr. Wash.), $9 \%$ in both South Palm Beach and West Palm Beach (Boynton), and 6\% in both Washington (DCJCC) and Washington (NOVA). The $13 \%$ compares to $12 \%$ in 2004 and $16 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-6 shows that, overall, 37\% of respondents perceive the MARJCC as excellent. The percentage is much higher for respondents in:

- elderly couple households (49\%)
- Reform households (47\%)
- JCC member households (47\%)
- households who donated $\$ 100-\$ 500$ to the Jewish Federation in the past year ( $51 \%$ )

The percentage who perceive the MARJCC as excellent is much lower for respondents in:

- Sephardic households ( $25 \%$ ) and Israeli $(24 \%$ ) households)
- households in residence in Miami for 5-9 years (23\%) and 10-19 years (27\%)
- households earning under $\$ 25,000$ ( $25 \%$ )

* In communities with more than one JCC and where data are available for each JCC, results reflect only the perception of respondents who live in the service area of each JCC.
- JCC is not a full service facility.

## Dave and Mary Alper Jewish Community Center

## Familiarity with the Dave and Mary Alper Jewish Community Center

Table 9-8 shows that $35 \%$ of respondents in Jewish households in South Dade are very familiar, $34 \%$ are somewhat familiar, and $31 \%$ are not at all familiar with the Dave and May Alper Jewish Community Center (Alper JCC). In examining these results, it should be noted that this study overestimates the true level of familiarity with the Alper JCC. Some respondents provide "false positive" responses to this question, because they confuse the Alper JCC with synagogues, the Jewish Federation, and other Jewish organizations.

Community Comparisons. Table 9-5 shows that the $35 \%$ very familiar with Alper JCC is average among about 40 comparison JCCs and compares to $44 \%$ in Washington (Gr. Wash.), 34\% in Washington (DCJCC), 32\% in Miami (Russell), 30\% in Miami (Miami Beach), 22\% in West Palm Beach (Kaplan), 19\% in Washington (NOVA), 18\% in Broward (Posnack), $15 \%$ in South Palm Beach, 14\% in West Palm Beach (Boynton), and 8\% in Broward (Soref). The 35\% compares to 37\% in 2004 and 33\% in 1994.

The 31\% not at all familiar with Alper JCC is above average among the comparison JCCs and compares to 68\% in Broward (Soref), 56\% in South Palm Beach, 53\% in West Palm Beach (Boynton), 43\% in Broward (Posnack), 42\% in Washington (NOVA), 41\% in Miami (Miami Beach), 39\% in West Palm Beach (Kaplan), 32\% in Miami (Russell), 15\% in Washington (DCJCC), and 14\% in Washington (Gr. Wash.) The 31\% compares to 19\% in 2004 and 22\% in 1994.

Comparisons Among Population Subgroups. Table 9-8 shows that, overall, 35\% of respondents are very familiar with the Alper JCC. The percentage is much higher for respondents (in):

- households in West Kendall (48\%)
- age 50-64 (45\%)
- JCC member households (82\%)

The percentage is much lower for respondents in:

- NE South Dade (18\%)
- Hispanic households (22\%) and Sephardic households (25\%)
- households in residence in Miami for 0-19 years (12\%)
- high rises (24\%)
- under age 35 ( $25 \%$ ) and age 75 and over (25\%)
- non-elderly single households (21\%)

Recall that the level of familiarity with the Alper JCC is that of the respondent. In some cases, the respondent is not the active JCC member in the household, which helps to explain why some respondents in JCC member households are only somewhat familiar or not at all familiar with the JCC.

# Dave and Mary Alper Jewish Community Center 

## Perception of the Dave and Mary Alper Jewish Community Center

Table 9-9 shows that 43\% of respondents in Jewish households in South Dade (who are very familiar or somewhat familiar with the Dave and Mary Alper Jewish Community Center (Alper JCC)) perceive the Alper JCC as excellent; 47\%, good; 8\%, fair; and $2 \%$, poor. In total, $90 \%$ of respondents who are very familiar or somewhat familiar with the Alper JCC and who were willing to provide a perception have positive (excellent + good) perceptions. Of respondents who are very familiar with the Alper JCC, $54 \%$ perceive it as excellent; $37 \%$, good; $7 \%$, fair; and $2 \%$, poor.

Community Comparisons. Table 9-7 shows that the 43\% excellent perceptions of the Alper JCC is above average among about 40 comparison Jewish Community Centers and compares to $40 \%$ in both Broward (Posnack) and West Palm Beach (Kaplan), 39\% in South Palm Beach, 37\% in each of Washington (DCJCC), Broward (Soref), and Miami (Russell), $35 \%$ in both Washington (Gr. Wash.) and Miami (Miami Beach), 30\% in West Palm Beach (Boynton), and 24\% in Washington (NOVA). The 43\% compares to 42\% in 2004 and 47\% in 1994.

The 10\% fair/poor perceptions of the Alper JCC is about average among about 40 comparison Jewish Community Centers and compares to $13 \%$ in Miami (Russell), 12\% in West Palm Beach (Kaplan), 11\% in Miami (Miami Beach), 10\% in each of Broward (Soref), Broward (Posnack), and Washington (Gr. Wash.), $9 \%$ in both South Palm Beach and West Palm Beach (Boynton), and 6\% in both Washington (DCJCC) and Washington (NOVA). The 10\% compares to $10 \%$ in 2004 and $6 \% \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-9 shows that, overall, 43\% of respondents perceive the Alper JCC as excellent. The percentage is much higher for respondents in:

- households who are very familiar with the Alper JCC (54\%)
- intermarried households (58\%)
- JCC member households (64\%)

The percentage who perceive the Alper JCC as excellent is much lower for respondents in:

- households in residence for 0-19 years (24\%)
- households who were asked but did not donate to the Jewish Federation in the past year (32\%)

# Galbut Family Miami Beach JEWISH COMMUNITY CENTER 

## FAMILIARITY WITH THE GALBUT FAMILY MIAMI BEACH JEWISH COMMUNITY CENTER

Table 9-10 shows that $30 \%$ of respondents in Jewish households in The Beaches are very familiar, $29 \%$ are somewhat familiar, and $41 \%$ are not at all familiar with the Galbut Family Miami Beach Jewish Community Center (MBJCC). In examining these results, it should be noted that this study overestimates the true level of familiarity with the MBJCC. Some respondents provide "false positive" responses to this question, because they confuse the MBJCC with synagogues, the Jewish Federation, and other Jewish organizations.

Community Comparisons. Table 9-5 shows that the $30 \%$ very familiar with the MBJCC is below average among about 40 comparison JCCs and compares to $44 \%$ in Washington (Gr. Wash.), 35\% in Miami (Alper), 34\% in Washington (DCJCC), 32\% in Miami (Russell), 22\% in West Palm Beach (Kaplan), 19\% in Washington (NOVA), 18\% in Broward (Posnack), $15 \%$ in South Palm Beach, 14\% in West Palm Beach (Boynton), and 8\% in Broward (Soref). The 30\% compares to 20\% in 2004 and 18\% in 1994.

The $41 \%$ not at all familiar with the MBJCC is well above average among the comparison JCCs and compares to 68\% in Broward (Soref), 56\% in South Palm Beach, 53\% in West Palm Beach (Boynton), 43\% in Broward (Posnack), 42\% in Washington (NOVA), 39\% in West Palm Beach (Kaplan), 32\% in Miami (Russell), 31\% in Miami (Alper), 15\% in Washington (DCJCC), and 14\% in Washington (Gr. Wash.) The 41\% compares to 44\% in 2004 and $42 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-10 shows that, overall, 30\% of respondents are very familiar with the MBJCC. The percentage is much higher for respondents in:

- single family homes (40\%)
- households with children (42\%)
- Reform households (42\%)
- synagogue member households (44\%) and JCC member households (78\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (46\%)

The percentage is much lower for respondents (in):

- part-year households (10\%)
- households in residence in Miami for 5-9 years (17\%)
- age 75 and over (13\%)
- Just Jewish households (14\%)
- synagogue non-member households (17\%) and JCC non-member households (18\%)

Recall that the level of familiarity with the MBJCC is that of the respondent. In some cases, the respondent is not the active JCC member in the household, which helps to explain why some respondents in JCC member households are only somewhat familiar or not at all familiar with the JCC.

# Galbut Family Miami Beach Jewish Community Center 

## Perception of the Galbut Family Miami Beach Jewish Community Center

Table 9-11 shows that $35 \%$ of respondents in Jewish households in The Beaches (who are very familiar or somewhat familiar with the Galbut Family Miami Beach Jewish Community Center (MBJCC)) perceive the MBJCC as excellent; 55\%, good; 10\%, fair; and $1 \%$, poor. In total, $90 \%$ of respondents who are very familiar or somewhat familiar with the MBJCC who were willing to provide a perception have positive (excellent + good) perceptions. Of respondents who live in Miami Beach and are very familiar with the MBJCC, $52 \%$ perceive it as excellent; $41 \%$, good; $6 \%$, fair; and $1 \%$, poor.

Community Comparisons. Table 9-7 shows that the $35 \%$ excellent perceptions of the MBJCC is about average among about 40 comparison Jewish Community Centers and compares to 43\% in Miami (Alper), 40\% in both Broward (Posnack) and West Palm Beach (Kaplan), 39\% in South Palm Beach, 37\% in each of Washington (DCJCC), Broward (Soref), and Miami (Russell), 35\% in Washington (Gr. Wash.), 30\% in West Palm Beach (Boynton), and 24\% in Washington (NOVA). The 35\% compares to 26\% in 2004 and 23\% in 1994.

The $11 \%$ fair/poor perceptions of the MBJCC is about average among about 40 comparison Jewish Community Centers and compares to 13\% in Miami (Russell), 12\% in West Palm Beach (Kaplan), 10\% in each of Broward (Soref), Miami (Alper), Broward (Posnack), and Washington (Gr. Wash.), 9\% in both South Palm Beach and West Palm Beach (Boynton), and 6\% in both Washington (DCJCC) and Washington (NOVA). The $11 \%$ compares to $22 \%$ in 2004 and $21 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-11 shows that overall, 35\% of respondents perceive the MBJCC as excellent. The percentage is much higher for respondents in:

- households who are very familiar with the Miami Beach JCC (52\%
- JCC member households (50\%)

The percentage is much lower for respondents in:

- households in residence in Miami for 0-19 years (25\%)

## The Greater Miami Jewish Federation

## Familiarity with the Greater Miami Jewish Federation

Table 9-12 shows that $21 \%$ of respondents in Jewish households in Miami are very familiar, $44 \%$ are somewhat familiar, and $35 \%$ are not at all familiar with the Greater Miami Jewish Federation (Jewish Federation). In examining these results, it should be noted that this study overestimates the true level of familiarity with the Jewish Federation as some respondents provide "false positive" responses to this question, because they confuse the Jewish Federation with the Jewish Community Center, the Jewish National Fund, the Jewish Foundation, and other Jewish organizations.

Community Comparisons. Table 9-13 shows that the $21 \%$ very familiar with the local Jewish Federation is about average among about 35 comparison Jewish communities and compares to $16 \%$ in New York, 15\% in Washington, 13\% in South Palm Beach, 12\% in Broward, and 11\% in West Palm Beach. The 21\% compares to 30\% in 2004 and 29\% in 1994.

The $35 \%$ not at all familiar with the local Jewish Federation is about average among about 40 comparison Jewish communities and compares to $63 \%$ in West Palm Beach, 59\% in South Palm Beach, 49\% in both New York and Broward, and 44\% in Washington. The $35 \%$ compares to $28 \%$ in 2004 and $25 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-12 shows that, overall, 21\% of respondents are very familiar with the Jewish Federation. The percentage is much higher for respondents in:

- households earning an annual income of \$200,000 and over (32\%)
- synagogue member households (33\%), JCC member households (32\%), and Jewish organization member households (34\%)
- households in which an adult visited Israel on a Jewish trip (32\%)
- households who donated $\$ 100-\$ 500$ ( $41 \%$ ) and $\$ 500$ and over ( $62 \%$ ) to the Jewish Federation in the past year

The percentage is much lower for respondents in:

- FSU households (11\%)
- households in residence in Miami for 0-4 years (7\%) and 5-9 years (11\%)
- intermarried households (10\%)
- households who were not asked to donate to the Jewish Federation in the past year (9)

## The Greater Miami Jewish Federation

## Perception of the Greater Miami Jewish Federation

Table $9-14$ shows that $30 \%$ of respondents in Jewish households in Miami who are very/somewhat familiar with the Greater Miami Jewish Federation (Jewish Federation) and were able to provide a perception perceive it as excellent; $53 \%$, good; 13\%, fair; and $3 \%$, poor. In total, $84 \%$ of respondents have positive (excellent and good) perceptions. Of respondents who are very familiar with the Greater Miami Jewish Federation, $40 \%$ perceive it as excellent; $44 \%$, good; $9 \%$, fair; and $7 \%$, poor.

Community Comparisons. Table 9-15 shows that the 30\% excellent perceptions of the local Jewish Federation is about average among about 35 comparison Jewish communities and compares to $32 \%$ in South Palm Beach, $28 \%$ in both West Palm Beach and Broward, and $20 \%$ in Washington. The 30\% compares to $33 \%$ in both 2004 and 1994.

The $16 \%$ fair/poor perceptions of the local Jewish Federation is about average among about 35 comparison Jewish communities and compares to $14 \%$ in both Washington and Broward, and 13\% in both South Palm Beach and West Palm Beach. The 16\% compares to $12 \%$ in 2004 and $14 \%$ in 1994.

Comparisons Among Population Subgroups. Table 9-14 shows that, overall, 30\% of respondents perceive the Jewish Federation as excellent. The percentage is much higher for respondents in:

- households who are very familiar with the Jewish Federation (40\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (48\%)

The percentage is much lower for respondents in:

- South Beach (13\%)

## Miami Jewish Health Systems

## Familiarity with Miami Jewish Health Systems

Table 9-16 shows that $15 \%$ of respondents in Jewish households in Miami are very familiar, $26 \%$ are somewhat familiar, and $59 \%$ are not at all familiar with the Miami Jewish Health Systems. 17\% of respondents age 65 and over are very familiar with the Miami Jewish Health Systems, 32\% are somewhat familiar, and 51\% are not at all familiar.

Community Comparisons. Table 9-17 shows that the $15 \%$ very familiar with the local Jewish nursing home is the fourth lowest of about 25 comparison Jewish nursing homes and compares to $20 \%$ in Washington, 10\% in West Palm Beach, and 5\% in South Palm Beach. The 15\% compares to 24\% in 2004 and 20\% in 1994.

The $59 \%$ not at all familiar with the local Jewish nursing home is the fourth highest of about 25 comparison Jewish nursing homes and compares to 82\% in South Palm Beach, $69 \%$ in West Palm Beach, and 39\% in Washington. The 59\% compares to 43\% in 2004 and $45 \%$ in 1994.

Table 9-18 shows that the 17\% of respondents age 65 and over who are very familiar with the local Jewish nursing home is the fourth lowest of about 25 comparison Jewish nursing homes and compares to 33\% in Washington, 10\% in West Palm Beach, and 4\% in South Palm Beach. The 17\% compares to 28\% in 2004 and 22\% in 1994.

The $51 \%$ of respondents age 65 and over who are not at all familiar with the local Jewish nursing home is well above average among about 25 comparison Jewish nursing homes and compares to $84 \%$ in South Palm Beach, 66\% in West Palm Beach, and 24\% in Washington. The 51\% compares to 37\% in 2004 and 41\% in 1994.

Comparisons Among Population Subgroups. Table 9-16 shows that, overall, 15\% of respondents are very familiar with Miami Jewish Health Systems. The percentage is much higher for respondents in:

- households who donated $\$ 500$ and over to the Jewish Federation in the past year (32\%)

The percentage is much lower for respondents in:

- part-year households (5\%)
- South Beach (4\%)
- households in residence in Miami for 0-4 years (5\%) and 5-9 years (5\%)

## Miami Jewish Health Systems

## Perception of Miami Jewish Health Systems

Table $9-19$ shows that $36 \%$ of respondents in Jewish households in Miami who are very/somewhat familiar with the Miami Jewish Health Systems and were able to provide a perception perceive it as excellent; $48 \%$, good; $13 \%$, fair; and $3 \%$, poor. In total, $84 \%$ of respondents have positive (excellent and good) perceptions. 39\% of respondents age 65 and over who are very/somewhat familiar with the Miami Jewish Health Systems and were able to provide a perception perceive it as excellent; $46 \%$, good; $11 \%$, fair; and $5 \%$, poor. In total, $85 \%$ of respondents age 65 and over have positive (excellent and good) perceptions. Of respondents who are very familiar with Miami Jewish Health Systems, 49\% perceive it as excellent; 36\%, good; 9\%, fair; and 6\%, poor.

Community Comparisons. Table 9-20 shows that the 36\% excellent perceptions of the local Jewish nursing home is well below average among about 25 comparison Jewish nursing homes and compares to 54\% in West Palm Beach, 34\% in Washington, and 26\% in South Palm Beach. The 36\% compares to 42\% in 2004 and 39\% in 1994.

The 16\% fair/poor perceptions of the local Jewish nursing home is above average among about 25 comparison Jewish nursing homes and compares to $21 \%$ in South Palm Beach, $11 \%$ in Washington, and 6\% in West Palm Beach. The 16\% compares to 12\% in 2004 and 9\% in 1994.

Table 9-21 shows that the 39\% excellent perceptions of the local Jewish nursing home by respondents age 65 and over is below average among about 25 comparison Jewish nursing homes and compares to 54\% in West Palm Beach, 36\% in Washington, and 25\% in South Palm Beach. The 39\% compares to 43\% in 2004 and 38\% in 1994.

The $15 \%$ fair/poor perceptions of the local Jewish nursing home by respondents age 65 and over is about average among about 25 comparison Jewish nursing homes and compares to $21 \%$ in South Palm Beach, 16\% Washington, and 6\% in West Palm Beach. The 15\% compares to 9\% in 2004 and 10\% in 1994.

Comparisons Among Population Subgroups. Table 9-19 shows that, overall, 36\% of respondents perceive Miami Jewish Health Systems as excellent. The percentage is much higher for respondents in:

- households who are very familiar with Miami Jewish Health Systems (49\%)
- households earning an annual income of \$25,000-\$50,000 (55\%)

The percentage is much lower for respondents:

- under age 35 (22\%)

## Jewish Community Services

## Familiarity with Jewish Community Services

Table 9-22 shows that 9\% of respondents in Jewish households in Miami are very familiar, $30 \%$ are somewhat familiar, and $61 \%$ are not at all familiar with Jewish Community Services (JCS).

Community Comparisons. Table 9-23 shows that the $9 \%$ very familiar with JCS (called Jewish Family Service in most Jewish communities) is below average among about 35 comparison Jewish communities and compares to 16\% in Washington, $7 \%$ in both South Palm Beach and West Palm Beach, and 6\% in Broward. The 9\% compares to 13\% in 2004 and $19 \%$ in 1994.

The $61 \%$ not at all familiar with JCS is well above average among about 35 comparison Jewish communities and compares to $75 \%$ in West Palm Beach, $69 \%$ in both South Palm Beach and Broward, and 48\% in Washington. The 61\% compares to 54\% in 2004 and 42\% in 1994.

Comparisons Among Population Subgroups. Table 9-22 shows that, overall, 9\% of respondents are very familiar with JCS. The percentage is much higher for respondents in:

- households who donated $\$ 500$ and over to the Jewish Federation in the past year (35\%)

The percentage is much lower for respondents in:

- FSU households (2\%)

## Jewish Community Services

## Perception of Jewish Community Services

Table 9-24 shows that $30 \%$ of respondents in Jewish households in Miami who are very/somewhat familiar with Jewish Community Services (JCS) and were able to provide a perception perceive it as excellent; $54 \%$, good; $14 \%$, fair; and $3 \%$, poor. In total, $84 \%$ of respondents have positive (excellent and good) perceptions.

Community Comparisons. Table 9-25 shows that the $30 \%$ excellent perceptions of JCS (called Jewish Family Service in most communities) is about average among about 35 comparison Jewish communities and compares to $36 \%$ in South Palm Beach, 35\% in Washington, 32\% in West Palm Beach, and 25\% in Broward. The 30\% compares to 27\% in 2004 and $32 \%$ in 1994.

The 16\% fair/poor perceptions of JCS is about average among about 35 comparison Jewish communities and compares to 16\% in West Palm Beach, 14\% in Broward, 11\% in South Palm Beach, and 10\% in Washington. The 16\% compares to 13\% in 2004 and 15\% in 1994.

Comparisons Among Population Subgroups. Table 9-24 shows that, overall, 30\% of respondents perceive JCS as excellent. The percentage is much higher for respondents: in:

- households who are very familiar with Jewish Community Services (50\%)
- Middle Beach (41\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (42\%)

The percentage is much lower for respondents (in):

- South Beach (10\%)
- households in residence in Miami for 0-4 years (16\%)
- under age 35 (20\%)

## Center for the Advancement of Jewish Education

In a question asked in the 2004 study, but not repeated in this study, 8\% of respondents were very familiar with the Center for the Advancement of Jewish Education, 12\%, somewhat familiar; and $79 \%$, not at all familiar. $36 \%$ of the respondents who were very/somewhat familiar with CAJE perceived it as excellent, $55 \%$, good; $9 \%$, fair; and 1\%, poor.

For comparisons of these statistics with other communities, see Section 22 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Foundation of Jewish Philanthropies of the Greater Miami Jewish Federation

In a question asked in the 2004 study, but not repeated in this study, 8\% of respondents were very familiar with the Foundation of Jewish Philanthropies of the Greater Miami Jewish Federation, 16\%, somewhat familiar; and 77\%, not at all familiar. 30\% of the respondents who were very/somewhat familiar with the Foundation perceived it as excellent, 59\%, good; 9\%, fair; and 2\%, poor.

For comparisons of these statistics with other communities, see Section 22 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

Uphold the cause of the fatherless and the widow, and befriends thestranger, providing fim with food and clothing.
(DEUTERONOMY 10:18)

## Limiting Physical, MEntal, and Other Health Conditions

Table $\mathbf{1 0 - 1}$ shows that $15 \%$ ( 8,578 households) of Jewish households in Miami contain an adult who has a physical, mental, or other health condition (health-limited adult) that has lasted for six months or more and limits or prevents employment, educational opportunities, or daily activities. Each respondent defined "physical, mental, or other health condition" for himself/herself. Included in the $15 \%$ are 6\% (3,398 households) of households in which an adult needs daily assistance as a result of his/her condition and $2 \%$ ( 1,337 households) of households in which an adult needs weekly assistance as a result of his/her condition.
$23 \%$ ( 2,417 households) of elderly couple households contain a health-limited adult, including 11\% (1,115 households) in which the adult needs daily assistance. 29\% (3,420 households) of elderly single households are health limited, including 9\% (1,081 households) who need daily assistance. 32\% of survivor households are health limited.

> Special Note: In Miami, in both 1994 and 2004, and in all other Jewish communities, the question asked about health limitations of adults was also asked separately about health limitations of children. In the Miami 2004 study, only $0.7 \%$ of households contained a health limited child without also containing a health-limited adult. Thus, despite this difference, the community comparisons presented below are still useful. Of course, the comparisons for elderly couple households and elderly single households are unaffected by this difference.

Community Comparisons. Table 10-2 shows that the $15 \%$ of households containing a health-limited adult is about average among about 40 comparison Jewish communities and compares to $22 \%$ in South Palm Beach, $21 \%$ in Broward, 20\% in West Palm Beach, and $8 \%$ in Washington. The $15 \%$ compares to $19 \%$ in 2004 and $15 \%$ in 1994. The $15 \%$ compares to $13 \%$ nationally.

The 6\% of households containing a health-limited adult who needs daily assistance is about average among about 35 comparison Jewish communities and compares to $7 \%$ in each of South Palm Beach, West Palm Beach, and Broward, and 2\% in Washington. The $6 \%$ compares to $7 \%$ in both 2004 and 1994. The 6\% compares to 4\% nationally.

Table 10-3 shows that the $23 \%$ of elderly couple households containing a health-limited adult is about average among about 35 comparison Jewish communities and compares to $26 \%$ in Broward, 22\% in both South Palm Beach and West Palm Beach, and 21\% in Washington. The $23 \%$ compares to $24 \%$ in 2004 and $22 \%$ in 1994. The $23 \%$ compares to $22 \%$ nationally.

The $11 \%$ of elderly couple households containing a health-limited adult who needs daily assistance is about average among about 35 comparison Jewish communities and compares to $12 \%$ in Washington, $11 \%$ in Broward, and 9\% in both South Palm Beach and West Palm Beach. The 11\% compares to $8 \%$ in 2004 and 12\% in 1994. The 11\% compares to $12 \%$ nationally.

Table 10-4 shows that the 29\% of elderly single households who are health limited is average among about 35 comparison Jewish communities and compares to 27\% in South Palm Beach, 26\% in Broward, 21\% in West Palm Beach, and 20\% in Washington. The $29 \%$ compares to $29 \%$ in 2004 and $21 \%$ in 1994. The $29 \%$ compares to $28 \%$ nationally.

The $9 \%$ of elderly single households who need daily assistance is about average among about 35 comparison Jewish communities and compares to 7\% in South Palm Beach, 6\% in Broward, and 4\% in both West Palm Beach and Washington. The 9\% compares to $9 \%$ in both 2004 and 1994. The 9\% compares to 5\% nationally.

Comparisons Among Population Subgroups. Table 10-1 shows that, overall, $15 \%$ of households contain a health-limited adult. The percentage is much higher in:

- Holocaust survivor households (32\%)
- elderly single households (29\%)
- households earning an annual income under \$25,000 (35\%)

The percentage is much lower in:

- households in NE South Dade (5\%) and South Beach (5\%)
- non-elderly couple households (5\%) and non-elderly single households (5\%)

| NJPS ${ }^{1}$ | 2000 | 28\% | 5\% |

${ }^{1}$ NJPS 2000 data are for the more Jewishly-connected sample.

## Disabled Adults

chapter 5 shows that $0.6 \%$ ( 634 adults) of adults in Jewish households in Miami are disabled and consequently unable to work. The nature of the disability was not queried.

## Households with <br> Disabled Adult Children at Home

$\triangle$0.4\% (223 households) of Jewish households in Miami contain a disabled adult child (age 18 and over) who is unable to work and lives at home with his/her parents or other adults. The nature of the disability was not queried. The $0.4 \%$ does not include households in which the disabled adult children are living in group homes, either in Miami or elsewhere.

## Need for Selected Social Services in the Past Year

While the best indicators of social service needs include such factors as age, household structure, and household income, respondents in Jewish households in Miami were asked directly about their need for a variety of social services in the past year. When respondents reported that their households needed a service, they were asked whether the service had been received. If the households received the service, the respondents were asked whether the service had been received from a Jewish source (Jewish help) or a non-Jewish source (other help). In examining these results, it should be noted that some respondents may feel uneasy about admitting the need for some of these services. Thus, it is likely that this study underestimates the actual need for social services in the past year.

## Help in Coordinating Services for an Elderly Person

Table $10-5$ shows that $15.3 \%$ ( 8,522 households) of households needed help in coordinating services for an elderly person (coordinating services) in the past year. Included in the $15.3 \%$ are $1.4 \%$ ( 780 households) of households who did not receive help in coordinating services, $3.3 \%$ ( 1,838 households) who received help from Jewish sources, and $10.6 \%$ ( 5,904 households) who received help from non-Jewish sources. Thus, most households who needed help in coordinating services received it, and most households received the help from non-Jewish sources.

Community Comparisons. Table $\mathbf{1 0 - 6}$ shows that the $15.3 \%$ who needed help in coordinating services in the past year is about average among about 20 comparison Jewish communities and compares to $11.6 \%$ in Washington, $11.2 \%$ in South Palm Beach, and $10.3 \%$ in West Palm Beach. The $15.3 \%$ compares to $10.7 \%$ in 2004. The general pattern among the comparison Jewish communities is that most households who needed help in coordinating services received it, and most households received the help from non-Jewish sources. Note that the question asked in Miami in 2004 and in other Jewish communities referred to an elderly or disabled person. Had the current question been worded in this way it is likely that the $15.3 \%$ would be marginally higher.

## Help in Coordinating Services for a Non-Elderly Disabled Person

Table 10-5 shows that $4.3 \%$ ( 2,395 households) of households needed help in coordinating services for a non-elderly disabled person in the past year. Included in the $4.3 \%$ are $1.0 \%$ ( 557 households) of households who did not receive help in coordinating services, $1.1 \%$ ( 613 households) who received help from Jewish sources, and $2.2 \%$ ( 1,225 households) who received help from non-Jewish sources.

Marital, Family, or Personal Counseling

Table 10-5 shows that $8.6 \%$ (4,790 households) of households needed marital, family, or personal counseling (counseling) in the past year. Included in the 8.6\% are 1.7\% (947 households) of households who did not receive counseling, 1.4\% (780 households) who received counseling from Jewish sources, and $5.5 \%$ ( 3,063 households) who received counseling from non-Jewish sources. Thus, most households who needed counseling received it, and most households received counseling from non-Jewish sources.

Community Comparisons. Table $\mathbf{1 0 - 7}$ shows that the $8.6 \%$ who needed counseling in the past year is about average among about 40 comparison Jewish communities and compares to $12.1 \%$ in Washington, $8.2 \%$ in Broward, $6.2 \%$ in South Palm Beach, and $5.2 \%$ in West Palm Beach. The $8.6 \%$ compares to $8.6 \%$ in 2004 and $8.9 \%$ in 1994. The general pattern among the comparison Jewish communities is that most households who needed counseling received it, and most households received counseling from non-Jewish sources.

## Help in Finding a Job or Choosing an Occupation

Table 10-5 shows that $12.2 \%$ ( 4,138 households) of households with adults age 18-64 needed help in finding a job or choosing an occupation (job counseling) in the past year. Included in the $12.2 \%$ are $6.9 \%$ ( 2,341 households) of households who did not receive job counseling, 1.3\% (440 households) who received counseling from Jewish sources, and $4.0 \%$ ( 1,357 households) who received counseling from non-Jewish sources. Thus, most households who needed job counseling did not receive it, and all households who received job counseling received it from non-Jewish sources.

Community Comparisons. Table $\mathbf{1 0 - 8}$ shows that the $12.2 \%$ who needed job counseling in the past year is about average among about 30 comparison Jewish communities and compares to 10.5\% in Washington, $9.1 \%$ in South Palm Beach, and $7.9 \%$ in both West Palm Beach and Broward. The 12.2\% compares to $7.6 \%$ in 2004 and $6.2 \%$ in 1994. The $12.2 \%$ compares to $9.5 \%$ nationally. The general pattern among the comparison Jewish communities is that about half of households who needed job counseling received it, and most households received job counseling from non-Jewish sources.

## Help or Screening for Jewish Children with Special Needs

Table $\mathbf{1 0 - 5}$ shows that $11.2 \%$ (1,372 households) of households with Jewish children age 0-17 needed help or screening for Jewish children with physical, developmental, or learning disabilities or other special needs (learning disabled programs) in the past year. The nature or degree of the learning disability or other special need was not queried. Included in the 11.2\% are 1.7\% (208 households) of households who did not get the screening or enroll the children in learning disabled or special needs programs, 1.7\% (208
households) who enrolled the children in learning disabled or special needs programs provided by Jewish sources, and $7.8 \%$ ( 956 households) who enrolled the children in programs provided by non-Jewish sources. Thus, most households who needed learning disabled or special needs programs enrolled the children in such programs, and most households enrolled the children in programs provided by non-Jewish sources.

Community Comparisons. Table $\mathbf{1 0 - 9}$ shows that the $11.2 \%$ who needed learning disabled programs in the past year is about average among about 30 comparison Jewish communities and compares to $14.1 \%$ in Washington, 12.9\% in West Palm Beach, 10.2\% in Broward, and $9.7 \%$ in South Palm Beach. The $11.2 \%$ compares to $9.8 \%$ in 2004. The general pattern among the comparison Jewish communities is that most households who needed learning disabled programs enrolled the children in such programs, and most households enrolled the children in learning disabled programs provided by non-Jewish sources.

Note that the comparisons should be treated with caution. In all other Jewish communities and in the 2004 Miami study, the question was asked as: " In the past year, did you need programs for children under age 18 with learning disabilities or other special needs, such as developmental disabilities?"

# NeEd FOR SELECTED SOCIAL SERVICES FOR HOUSEHOLDS WITH PERSONS AGE 75 AND OVER IN THE PAST YEAR 

The need for four social services in the past year was examined for Jewish households with persons age 75 and over in Miami.

## In-Home Health Care

Table 10-5 shows that $28.3 \%$ ( 4,508 households) of households with persons age 75 and over needed in-home health care in the past year. Included in the 28.3\% are 1.7\% (271 households) of households who did not receive in-home health care and 26.6\% (4,237 households) who received in-home health care. Thus, most households who needed inhome health care received it.

Community Comparisons. Table $\mathbf{1 0 - 1 0}$ shows that the $28.3 \%$ who needed in-home health care in the past year is the highest among about 35 comparison Jewish communities and compares to $18.3 \%$ in South Palm Beach, $17.2 \%$ in West Palm Beach, $15.7 \%$ in Broward, and $12.9 \%$ in Washington. The $28.3 \%$ compares to $23.0 \%$ in 2004. The general pattern among the comparison Jewish communities is that most households who needed in-home health care received it.

## Senior Transportation

Table 10-5 shows that $14.5 \%$ ( 2,310 households) of households with persons age 75 and over needed senior transportation in the past year. Included in the 14.5\% are 2.4\% (382 households) of households who did not receive senior transportation and 12.1\% (1,928 households) who received senior transportation. Thus, most households who needed senior transportation received it.

Community Comparisons. Table 10-11 shows that the $14.5 \%$ who needed senior transportation in the past year is about average among about 35 comparison Jewish communities and compares to $12.6 \%$ in Washington, $11.5 \%$ in Broward, $8.1 \%$ in South Palm Beach, and 6.8\% in West Palm Beach. The 14.5\% compares to $12.7 \%$ in 2004 and $13.7 \%$ in 1994. The general pattern among the comparison Jewish communities is that most households who needed senior transportation received it.

## Assisted Living Facility

Table 10-5 shows that $6.4 \%$ (1,020 households) of households with persons age 75 and over needed an assisted living facility in the past year. Included in the $6.4 \%$ are $2.1 \%$ ( 335 households) of households who did not move into an assisted living facility and $4.3 \%$ ( 685 households) who either already lived in an assisted living facility or moved into such in the past year. Thus, most households who needed an assisted living facility moved into one.

Community Comparisons. Table 10-12 shows that the $6.4 \%$ who needed an assisted living facility in the past year is the second highest of about 15 comparison Jewish communities and compares to $1.4 \%$ in West Palm Beach and $1.3 \%$ in South Palm Beach. The general pattern among the comparison Jewish communities is that most households who needed an assisted living facility moved into one.

## Home-Delivered Meals

Table 10-5 shows that $5.3 \%$ ( 844 households) of households with persons age 75 and over needed home-delivered meals in the past year. Included in the 5.3\% are 0.3\% (48 households) of households who did not receive home-delivered meals and 5.0\% (796 households) who received home-delivered meals. Thus, most households who needed home-delivered meals received them.

Community Comparisons. Table $\mathbf{1 0 - 1 3}$ shows that the $5.3 \%$ who needed homedelivered meals in the past year is about average among about 25 comparison Jewish communities and compares to $3.4 \%$ in Broward, $1.9 \%$ in West Palm Beach, $1.7 \%$ in South Palm Beach, and $1.5 \%$ in Washington,. The $5.3 \%$ compares to $4.1 \%$ in 2004 and $3.5 \%$ in 1994. The general pattern among the comparison Jewish communities is that most households who needed home-delivered meals received them.

## Need for Nursing Home Care in the Past Year

In a question asked in the 2004 study, but not repeated in this study, $1.8 \%$ of Jewish households with persons age 65 and over had a need for nursing home care in the past year. $0.6 \%$ received Jewish nursing home care; $1.0 \%$ received other nursing home care; and $0.2 \%$ received no nursing home care.

For comparisons of these statistics with other communities, see Section 25 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Preference for Jewish-Sponsored Adult Care Facilities

In a question asked in the 2004 study, but not repeated in this study, 2.6\% of Jewish households with persons age 65 and over had a need for adult day care in the past year. $0.0 \%$ received Jewish adult day care; 2.2\% received other adult day care; and 0.4\% received no adult day care.

For comparisons of these statistics with other communities, see Section 25 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

# Need for Selected Social Services Among Population Subgroups in the Past Year 

Tables $\mathbf{1 0 - 1 4}$ to $\mathbf{1 0 - 1 7}$ show, for various population subgroups, the percentage of Jewish households in Miami who in the past year needed each of the social services discussed in the preceding sections.

## Comparisons Among Population Subgroups.

## Help in Coordinating Services for an Elderly Person

Table 10-14 shows that, overall, $15 \%$ of households needed help in coordinating services for an elderly person in the past year. The percentage is much higher in:

- Holocaust survivor households (28\%)

Help in Coordinating Services for a Non-Elderly Disabled Person
Table $\mathbf{1 0 - 1 4}$ shows that, overall, $4 \%$ of households needed help in coordinating services for a non-elderly disabled person in the past year. No population subgroups show important differences from the overall percentage.

Marital, Family, or Personal Counseling

Table $\mathbf{1 0 - 1 4}$ shows that, overall, $9 \%$ of households needed marital, family, or personal counseling in the past year. No population subgroups show important differences from the overall percentage.

## Help in Finding a Job or Choosing an Occupation

Table 10-15 shows that, overall, $12 \%$ of households with adults age 18-64 needed help in finding a job or choosing an occupation in the past year. The percentage is much higher in:

- households earning an annual income under $\$ 25,000$ and over ( $25 \%$ ) and \$25,000-\$50,000 (22\%)

## Help or Screening for Jewish Children with Special Needs

Table 10-16 shows that, overall, 11\% of households with Jewish children age 0-17 needed programs for Jewish children with learning disabilities or other special needs such as developmental disabilities in the past year. No population subgroups show important differences from the overall percentage.

## Social Services for Persons Age 75 and Over

Table 10-17 shows that, overall, $28 \%$ of households with persons age 75 and over needed in-home health care in the past year; 15\%, senior transportation; 6\%, an assisted living facility; and 5\%, home-delivered meals.

The percentages for in-home health care is much higher in:

- elderly single households (38\%)
- households earning an annual income under \$25,000 (40\%)

The percentages is much lower in:

- households earning an annual income of \$100,000-\$200,000 (16\%) and \$200,000 and over (18\%)

The percentage for senior transportation is much higher in:

- households in North Dade Core West (25\%)
- households earning an annual income of under \$25,000 (32\%)

The percentage is much lower in:

- households earning an annual income of \$100,000-\$200,000 (4\%) and \$200,000 and over (5\%)

The percentage for assisted living is much higher in:

- West Kendall (19\%)

The percentage for home-delivered meals is much higher in:

- households earning an annual income under \$25,000 (17\%)

## TABLE 10-17

NeEd for Selected Social Services for the Elderly in the Past Year

## Base: Jewish Households With Persons Age 75 and OVEr

* The overall percentage shown above derives from households with persons age 75 and over in all household structures, not just the elderly couple households and elderly single households shown in the table.
Note that in this section crosstabulations with a number of different variables are presented despite the small sample sizes for some of these population subgroups. In some cases, population subgroups cannot be shown because the sample sizes are very small. Also, because of the small sample sizes, percentages that may appear to vary among population subgroups are not statistically significantly different. Thus, results in this section should be treated with caution because of the small sample sizes. See Chapter 2 for guidance on sample size issues.

## Activities of Daily Living in the Past Year

In a question asked in the 2004 study, but not repeated in this study, $3.2 \%$ of respondents needed assistance with bathing or showering; 3.0\%, getting around inside the house; $2.8 \%$, dressing; $2.8 \%$, managing medicine; $2.4 \%$, taking care of appearance; $1.7 \%$, using the bathroom; and $1.2 \%$, eating.

## CARING FOR ELDERLY RELATIVES

Table $\mathbf{1 0 - 1 9}$ shows that $15 \%$ ( 6,745 households) of Jewish households in Miami in which the respondent is age 40 or over have an elderly relative who lives outside the respondent's home and in some way depends upon the household for their care (caregiver households). The respondent defined "care" for himself/herself. Included in the 15\% of caregiver households are $8 \%$ in which the elderly relative lives in Miami, $3 \%$ in which the elderly relative lives in Broward, 1\% in which the relative lives in Palm Beach County, and $4 \%$ in which the elderly relative lives elsewhere.

Table 10-18 shows where the elderly person needing care lives.
Community Comparisons. Table 10-19 shows that the $15 \%$ of caregiver households is about average among about 20 comparison Jewish communities and compares to 14\% in Washington, 10\% in South Palm Beach, and 9\% in West Palm Beach. The 15\% compares to $15 \%$ in 2004.

## THE SANDWICH GENERATION

Table $\mathbf{1 0 - 2 0}$ shows that $16 \%$ ( 1,147 households) of Jewish households with children in Miami in which the respondent is age 40 or over are caregiver households. The adults in these households, who have been called the sandwich generation, have the responsibility to care for both minor children at home and elderly relatives who live outside their home.

Community Comparisons. Table $\mathbf{1 0 - 2 0}$ shows that the $16 \%$ of households with children who are caregiver households is about average among about 20 comparison Jewish communities and compares to 23\% in South Palm Beach, 15\% in Washington, and 14\% in West Palm Beach. The 16\% compares to 23\% in 2004.

${ }^{1}$ Question was asked of respondents age 40-79.
${ }^{2}$ Question was asked of respondents age 50 and over.

## Local Adult Children

Respondents age 40 and over in Jewish households in Miami were asked whether they have adult children who have established their own homes, and if so, whether these children live in Miami (households with local adult children), Broward, Palm Beach, or elsewhere. The results are shown in the "Location of Adult Children" section in Chapter 4.

The location of adult children has an impact upon social service needs because households with local adult children often have a support system, particularly in times of poor health or financial crisis, that may not be available to households with no adult children living in Miami. Social service needs tend to increase significantly with age. Table $4-35$ shows that $40 \%$ of households in which the respondent is age 75 or over have at least one adult child who has established his/her own home in Miami. In addition, 12\% have adult children who have established their own homes in Broward and 2\% in Palm Beach.

Community Comparisons. Table 10-21 shows that the $40 \%$ of households in which the respondent is age 75 or over with local adult children is well below average among about 35 comparison Jewish communities and compares to $64 \%$ in New York, 62\% in Washington, $21 \%$ in South Palm Beach, $17 \%$ in Broward, and $16 \%$ in West Palm Beach.

See the "Location of Adult Children" section in Chapter 4 for more information.

## Low Income Households

Because income is an issue of demography, it is discussed in Chapter 5. However, income does have an impact upon social service needs in Miami, particularly among elderly households. See the "Low Income Households" and "Households Living Below the Poverty Levels" sections in Chapter 5 for more information.

* Local is defined to include both Twin Cities communities.
** Excludes households with adult children living in Broward, South Palm Beach, or West Palm Beach.
${ }^{1}$ Excludes $18 \%$ of households with adult children living in the New York metropolitan area.
${ }^{2}$ Excludes 7\% of households with adult children living in Philadelphia.
${ }^{3}$ Excludes $21 \%$ of households with adult children living outside Greater New Haven but within 90 minutes.
${ }^{4}$ Excludes $10 \%$ of households with adult children living in Ocean or Middlesex Counties.
${ }^{5}$ Excludes $48 \%$ of households with adult children living outside Middlesex but within 90 minutes.
${ }^{6}$ Excludes households with adult children living in Broward or Miami.
${ }^{7}$ Excludes households with adult children living in South Palm Beach, West Palm Beach, or Miami.
${ }^{8}$ Excludes households with adult children living in Broward or Miami.
${ }^{9}$ Includes households with adult children living in the Baltimore or Washington area.

## Preference for Jewish-Sponsored Adult Care Facilities

In a question asked in the 2004 study, but not repeated in this study, $67 \%$ of Jewish respondents age 40 and over very much prefer a Jewish-Sponsored Adult Care Facility; $17 \%$, somewhat prefer; $15 \%$, have no preference; and $1 \%$, rather not use a JewishSponsored Adult Care Facility.

For comparisons of these statistics with other communities, see Section 25 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

Emotional Attachment to Israel. ..... 11-20
Go to the land that I will show you. I will bless you and make yourdescendants into a great nation. You will become famous and be a6lessing to others.

## Households in Which a Member Visited Israel

Table 11-1 shows that $71 \%$ of Jewish households in Miami contain an adult or a Jewish child (member) who visited Israel. Two types of trips to Israel are defined in this study:
(1) Jewish Trip: A Jewish trip to Israel is a trip sponsored by a Jewish group, such as a Jewish Federation, Jewish agency, synagogue, or Jewish organization. Households containing members who lived or studied in Israel (excluding households containing Israelis) are reported as households in which a member visited Israel on a Jewish trip. Households containing members who visited Israel on both a Jewish trip and a general trip (excluding households containing Israelis) are reported as households in which a member visited Israel on a Jewish trip.
(2) General Trip: A general trip to Israel is either a trip sponsored by a non-Jewish group or commercial company or a trip in which a household member visited Israel on his/her own. Households containing Israelis are reported as households in which a member visited Israel on a general trip. Israelis are included as having visited Israel on a general trip.
(3) The Jewish Trip Market Share (market share) is defined as the percentage of households in which a member who visited Israel visited on a Jewish trip.

26\% of households contain a member who visited Israel on a Jewish trip and 45\%, on a general trip. The market share is $37 \%$.
$\checkmark$ The 6\% of households in which a member visited Israel on both a Jewish trip and a general trip are reported as households in which a member visited Israel on a Jewish trip.

Community Comparisons. Table $\mathbf{1 1 - 2}$ shows that the $71 \%$ of households in which a member visited Israel is the highest of about 35 comparison Jewish communities and compares to 61\% in South Palm Beach, 55\% in West Palm Beach, 52\% in Broward, and $51 \%$ in Washington. The 71\% compares to 62\% in 2004 and 55\% in 1994.

Table 11-3 shows that the $26 \%$ of households in which a member visited Israel on a Jewish trip is the fourth highest of about 35 comparison Jewish communities and compares to $28 \%$ in South Palm Beach, $25 \%$ in both West Palm Beach and Washington, and $20 \%$ in Broward. The $26 \%$ compares to $25 \%$ in 2004 and $33 \%$ in 1994.

The 45\% of households in which a member visited Israel on a general trip is the highest of about 35 comparison Jewish communities and compares to $32 \%$ in both South Palm Beach and Broward, 30\% in West Palm Beach, and 26\% in Washington. The 45\% compares to $37 \%$ in 2004 and $22 \%$ in 1994.

The $37 \%$ market share is the fourth lowest of about 35 comparison Jewish communities and compares to $49 \%$ in Washington, $47 \%$ in South Palm Beach, 46\% in West Palm Beach, and 38\% in Broward. The 45\% compares to 41\% in 2004 and 60\% in 1994.

Comparisons Among Population Subgroups. Table 11-1 shows that, overall, 71\% of households contain a member who visited Israel. The percentage is much higher in:

- part-year households (87\%)
- households in North Beach (90\%) and South Beach (82\%)
- Hispanic households (85\%), Sephardic households (87\%), and Holocaust survivor households (91\%)
- households earning an annual income of \$200,000 and over (84\%)
- Orthodox households (96\%)
- in-married households (81\%)
- synagogue member households ( $87 \%$ ), households who attended Chabad in the past year (83\%), JCC member households (81\%), and Jewish organization member households (83\%)
- households who donated \$500 and over to the Jewish Federation in the past year (95\%)

The percentage is much lower in:

- households in West Kendall (50\%)
- elderly single households (60\%)
- households earning an annual income under \$25,000 (54\%)
- Reform households (61\%)
- intermarried households (47\%)

## TRIPS TO ISRAEL BY JEWISH CHILDREN

Table $11-4$ shows that $46 \%$ of households with Jewish children age 6-17 in Miami have sent a Jewish child to Israel: $12 \%$ on a Jewish trip and $34 \%$, on a general trip. The $12 \%$ includes $4 \%$ of households with Jewish children age 6-17 who have sent a Jewish child to Israel on both a Jewish trip and a general trip.

Note that these results exclude households with part-Jewish children. Including part-Jewish children, the results for age 6-17 become 12\% on a Jewish trip, 33\% on a general trip, and $55 \%$ not to Israel.

A total of $57 \%$ of households with Jewish children age 13-17 have sent a Jewish child to Israel: 18\% on a Jewish trip and 39\%, on a general trip. The $18 \%$ includes $3 \%$ of households with Jewish children age 13-17 who have sent a Jewish child to Israel on both a Jewish trip and a general trip.

Community Comparisons. Table 11-5 shows that the $46 \%$ of households with Jewish children age 6-17 who have sent a Jewish child on a trip to Israel is the highest of about 40 comparison Jewish communities and compares to $35 \%$ in New York, $30 \%$ in Cleveland, $21 \%$ in Broward, $16 \%$ in both South Palm Beach and Washington, and 5\% in West Palm Beach. The 46\% compares to 31\% in 2004 and 26\% in 1994.

The $12 \%$ who have sent a Jewish child to Israel on a Jewish trip is the second highest of about 35 comparison Jewish communities and compares to 5\% in South Palm Beach, 3\% in both Broward and Washington, and 1\% in West Palm Beach. The 12\% compares to 7\% in 2004 and 10\% in 1994.

The $34 \%$ who have sent a Jewish child to Israel on a general trip is the highest of about 35 comparison Jewish communities and compares to $18 \%$ in Broward, $13 \%$ in Washington, $11 \%$ in South Palm Beach, and 4\% in West Palm Beach. The 34\% compares to 24\% in 2004 and $16 \%$ in 1994.

## Cost Prevented Sending Jewish Children ON A TRIP TO ISRAEL

R
espondents in households with Jewish children age 6-17 in Miami (whose Jewish children have not visited Israel) were asked if cost ever prevented them from sending a Jewish child on a trip to Israel. Table 11-6 shows that $40 \%$ (1,707 households) of households with Jewish children age 6-17 (whose Jewish children have not visited Israel) did not send a child on a trip to Israel because of cost.

Comparisons Among Population Subgroups. Table 11-6 shows that, overall, 40\% of respondents in households with Jewish children age 6-17 (whose Jewish children have not visited Israel) said cost prevented them from sending a child on a trip to Israel. The percentage is much higher for respondents in:

- Sephardic households (57\%)
- households earning an annual income of \$50,000-\$100,000 (72\%)
- Conservative households (50\%)
- households in which an adult visited Israel on a general trip (51\%)

The percentage is much lower in respondents in:

- households earning an annual income of \$100,000-\$200,000 (27\%) and \$200,000 and over (18\%)
- Reform households (30\%)
- households in which an adult visited Israel on a Jewish trip (19\%)

## Seriously Investigate Sending Jewish Teenagers on a Trip to Israel

In a question asked in the 2004 study, but not repeated in this study, $27 \%$ of households with Jewish children age 0-17 reported that they had sent a Jewish child/teenager in the past on a trip to Israel; 4\% reported that they will definitely send a Jewish teenager in the future; $55 \%$, reported that they will seriously investigate; $3 \%$ reported that they don't know; and $11 \%$ reported that they will not seriously investigate sending a child on a trip to Israel.

For comparisons of these statistics with other communities, see Section 26 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish DataBank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org.

## EMOTIONAL ATTACHMENT TO ISRAEL

Table 11-7 shows that 32\% of Jewish respondents in Miami are extremely attached to Israel; 30\%, very attached; 27\%, somewhat attached; and 11\%, not attached to Israel. In total, $62 \%$ of respondents are extremely/very attached to Israel.

Community Comparisons. Table 11-8 shows that the $62 \%$ who are extremely/very attached to Israel is the highest of about 35 comparison Jewish communities and compares to $61 \%$ in South Palm Beach, $54 \%$ in West Palm Beach, $49 \%$ in Washington, and $42 \%$ in Broward. The 62\% compares to $62 \%$ in 2004 and $43 \%$ in 1994.

The $11 \%$ who are not attached to Israel is about average among about 35 comparison Jewish communities and compares to 17\% in Broward, 15\% in Washington, 9\% in West Palm Beach, and 7\% in South Palm Beach. The 11\% compares to 10\% in 2004 and 19\% in 1994.

Age of Respondent. Table 11-9 shows that the $65 \%$ of respondents under age 35 who are extremely/very attached to Israel is the highest of about 30 comparison Jewish communities and compares to $48 \%$ in Washington, $40 \%$ in Broward, $35 \%$ in South Palm Beach, and 25\% in West Palm Beach. The 65\% compares to 55\% in 2004 and 39\% in 1994.

The $63 \%$ of respondents age $35-49$ who are extremely/very attached to Israel is the highest of about 30 comparison Jewish communities and compares to $46 \%$ in Washington, 45\% in South Palm Beach, 39\% in Broward, and 33\% in West Palm Beach. The 63\% compares to 61\% in 2004 and $37 \%$ in 1994.

The 64\% of respondents age 50-64 who are extremely/very attached to Israel is the highest of about 30 comparison Jewish communities and compares to 54\% in South Palm Beach, 52\% in Washington, 50\% in West Palm Beach, and 31\% in Broward. The 64\% compares to $57 \%$ in 2004 and $41 \%$ in 1994.

The $56 \%$ of respondents age 65-74 who are extremely/very attached to Israel is about average among about 30 comparison Jewish communities and compares to $64 \%$ in South Palm Beach, 61\% in West Palm Beach, 47\% in Washington, and 46\% in Broward. The $56 \%$ compares to $66 \%$ in 2004 and $46 \%$ in 1994.

The 64\% of respondents age 75 and over who are extremely/very attached to Israel is the fourth highest of about 30 comparison Jewish communities and compares to $66 \%$ in South Palm Beach, 61\% in West Palm Beach, 53\% in Washington, and 46\% in Broward. The 64\% compares to 69\% in 2004 and 49\% in 1994.

The 60\% of respondents age 65 and over who are extremely/very attached to Israel is above average among about 30 comparison Jewish communities and compares to 65\% in South Palm Beach, $61 \%$ in West Palm Beach, $51 \%$ in Washington, and 46\% in Broward. The 60\% compares to $68 \%$ in 2004 and $48 \%$ in 1994.

Jewish Identification. Table 11-10 shows that the $86 \%$ of Orthodox respondents who are extremely/very attached to Israel is about average among about 20 comparison Jewish communities and compares to $100 \%$ in West Palm Beach, $96 \%$ in Washington, $84 \%$ in South Palm Beach, and 75\% in Broward. The 86\% compares to 90\% in 2004 and 81\% in 1994.

The 76\% of Conservative respondents who are extremely/very attached to Israel is the highest of about 30 comparison Jewish communities and compares to 76\% in South Palm Beach, 70\% in Washington, 69\% in West Palm Beach, and 50\% in Broward. The 76\% compares to $74 \%$ in 2004 and 54\% in 1994.

The 53\% of Reform respondents who are extremely/very attached to Israel is the second highest of about 30 comparison Jewish communities and compares to $56 \%$ in South Palm Beach, 51\% in West Palm Beach, 42\% in Washington, and 40\% in Broward. The 53\% compares to $54 \%$ in 2004 and $30 \%$ in 1994.

The 53\% of Just Jewish respondents who are extremely/very attached to Israel is the highest of about 30 comparison Jewish communities and compares to 44\% in South Palm Beach, 39\% in West Palm Beach, 32\% in Washington, and 31\% in Broward. The 53\% compares to 49\% in 2004 and 30\% in 1994.

Type of Marriage. Table 11-11 shows that the 71\% of respondents in in-married households who are extremely/very attached to Israel is the highest of about 35 comparison Jewish communities and compares to $66 \%$ in South Palm Beach, $62 \%$ in West Palm Beach, 61\% in Washington, and 50\% in Broward. The 71\% compares to 71\% in 2004 and 54\% in 1994.

The 60\% of respondents in conversionary in-married households who are extremely/very attached to Israel is the second highest of about 25 comparison Jewish communities and compares to $60 \%$ in Washington, $54 \%$ in South Palm Beach, 44\% in West Palm Beach, and $40 \%$ in Broward. The 60\% compares to $64 \%$ in 2004 and $35 \%$ in 1994.

The 49\% of respondents in intermarried households who are extremely/very attached to Israel is the second highest of about 35 comparison Jewish communities and compares to $41 \%$ in South Palm Beach, 30\% in both West Palm Beach and Broward, and 29\% in Washington. The 49\% compares to 34\% in 2004 and 27\% in 1994.

Note that the Community Comparisons need to be examined in light of events occurring in Israel at the time of each study. The Miami 2014 survey was completed well before Operation Protective Edge in Gaza in July and August of 2014.

Comparisons Among Population Subgroups. Table 11-7 shows that, overall, 62\% of respondents are extremely/very attached to Israel. The percentage is much higher for respondents in:

- part-year households (80\%)
- FSU households (77\%), Hispanic households (76\%), Sephardic households (74\%), Israeli households (91\%), and Holocaust survivor households (93\%)
- households in residence in Miami for 0-4 years (77\%)
- Orthodox households (86\%) and Conservative households (76\%)
- synagogue member households (76\%), households who attended Chabad in the past year (80\%), JCC member households (73\%), and Jewish organization member households (79\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (86\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (77\%)
- households in which an adult visited Israel on a general trip (72\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (84\%)

The percentage is much lower for respondents in:

- households in West Kendall (50\%)
- non-elderly single households (51\%)
- intermarried households (49\%)
- households in which no adult visited Israel (41\%)

Note that $1.5 \%$ of respondents were not Jewish. In almost all of these cases, the respondent was the non-Jewish spouse, partner, or significant other of a Jewish adult. In these cases, the question reported on in this section was asked of the non-Jewish respondent on behalf of the Jewish household member (in a "proxy" fashion).

Non-Jewish household members were generally interviewed when the Jewish household member would not cooperate with our survey, but the non-Jewish household member would, or when the Jewish household member was unavailable.

## A new King arose over Egypt who did not 反now Joseph. And he said to

 his people, "Look, the Israelite people are much too numerous for us. Let us deal shrewdly with them."(Exodus 1:8-10)

## Personally Experienced Anti-Semitism in Miami in the Past Year

Respondents in Jewish households in Miami were asked whether they personally experienced anti-Semitism in Miami in the past year. The respondent defined "anti-Semitism" for himself/herself. The nature of the anti-Semitic incident was not queried. Respondents who perceive no anti-Semitism in Miami (see the "Perception of Anti-Semitism in Miami" section below) were assumed not to have personally experienced anti-Semitism in Miami in the past year.

Table $12-1$ shows that $12 \%$ ( 6,740 households) of respondents personally experienced anti-Semitism in Miami in the past year.
$\boldsymbol{\checkmark}$ Omitted from this analysis are the $3 \%$ of respondents who responded "don't know" to this question.

Community Comparisons. Table $\mathbf{1 2 - 2}$ shows that the $12 \%$ who personally experienced anti-Semitism in the local community in the past year is about average among about 35 comparison Jewish communities and compares to $12 \%$ in Washington, 11\% in Broward, $9 \%$ in West Palm Beach, and $7 \%$ in South Palm Beach. The 12\% compares to $13 \%$ in 2004 and 14\% in 1994.

Comparisons Among Population Subgroups. Table 12-1 shows that, overall, 12\% of respondents personally experienced anti-Semitism in Miami in the past year. The percentage is much higher for respondents in:

- households in North Beach (22\%)

## Jewish Children Experienced Anti-Semitism in Miami in the Past Year

Table $\mathbf{1 2 - 3}$ shows that $6 \%$ ( 475 households) of households with Jewish children age 6-17 in Miami contain a Jewish child age 6-17 who experienced anti-Semitism in Miami.
$\checkmark$ Omitted from this analysis are the $3 \%$ of households with Jewish children age 6-17 in which the respondents responded "don't know" to this question.

Note that these results exclude households with part-Jewish children. However, including households with part-Jewish children, yields the same results.

Community Comparisons. Table 12-4 shows that the $6 \%$ with a Jewish child age 6-17 who experienced anti-Semitism in the local community in the past year is the lowest of about 30 comparison Jewish communities and compares to $28 \%$ in West Palm Beach, 16\% in Broward, 9\% in South Palm Beach, and 8\% in Washington. The 6\% compares to 9\% in 2004.

The low percentage of households in which a Jewish child age 6-17 experienced antiSemitism in Miami in the past year may be related, in part, to the high percentage of Jewish children in Jewish day school.

## Perception of Anti-Semitism in Miami

Table 12-5 shows that 9\% of respondents in Jewish households in Miami perceive a great deal of anti-Semitism in Miami; 29\%, a moderate amount; 42\%, a little; and $20 \%$, none at all. In total, $38 \%$ of respondents perceive a great deal/moderate amount of anti-Semitism in Miami.
$\checkmark$ Omitted from this analysis are the $12 \%$ of respondents who responded "don't know" to this question.

Community Comparisons. Table $\mathbf{1 2 - 6}$ shows that the $38 \%$ who perceive a great deal/moderate amount of anti-Semitism in the local community is below average among about 35 comparison Jewish communities and compares to 54\% in Broward, $41 \%$ in South Palm Beach, and $29 \%$ in Washington. The 38\% compares to 49\% in 2004 and $73 \%$ in 1994. The $38 \%$ compares to $82 \%$ nationally for the perception of anti-Semitism in the United States.

The 9\% who perceive a great deal of anti-Semitism in the local community is about average among about 35 comparison Jewish communities and compares to $15 \%$ in Broward, 9\% in South Palm Beach, and 3\% in Washington. The 9\% compares to 14\% in 2004 and $30 \%$ in 1994. The $9 \%$ compares to $34 \%$ nationally for the perception of antiSemitism in the United States.

The $20 \%$ who perceive no anti-Semitism at all in the local community is the fifth highest of about 35 comparison Jewish communities and compares to $26 \%$ in South Palm Beach, $14 \%$ in Broward, and 12\% in Washington. The 20\% compares to 12\% in 2004 and 3\% in 1994. The 20\% compares to $1 \%$ nationally for the perception of anti-Semitism in the United States.

Comparisons Among Population Subgroups. Table 12-5 shows that, overall, 38\% of respondents perceive a great deal/moderate amount of anti-Semitism in Miami. The percentage is much higher for respondents (in):

- who personally experienced anti-Semitism in Miami in the past year (65\%)
- households in West Kendall (50\%)
- age 65-74 (48\%) and age 75 and over (56\%)
- elderly couple households (49\%) and elderly single households (55\%)
- households earning an annual income under \$25,000 (52\%)
- households who donated under $\$ 100$ to the Jewish Federation in the past year (49\%)

The percentage is much lower for respondents (in):

- households in South Beach (18\%)
- FSU households (15\%) and Israeli households (27\%)
- households in residence in Miami for 0-4 years (9\%), 5-9 years (28\%), and 10-19 years (24\%)
- under age 35 (18\%) and age 35-49 (19\%)
- households with children (23\%) and non-elderly single households (28\%)
- households earning an annual income of \$200,000 and over (26\%)
- intermarried households (28\%)
- households who attended Chabad in the past year (28\%)

Note: Respondents who responded "don't know" to this question are omitted from the analysis.

## Personally Heard Unfair Criticism of Israel in Miami in the Past Year

Respondents in Jewish households in Miami were asked whether they had personally heard any criticism of Israel by personal acquaintances in Miami in the past year that they would consider unfair. The respondent defined "criticism" and "unfair" for himself/herself. Respondents who perceive no unfair criticism of Israel in Miami (see the "Perception of Unfair Criticism of Israel in Miami" section below) were assumed not to have personally heard any unfair criticism of Israel by personal acquaintances in Miami in the past year.

Table 12-7 shows that $20 \%$ (10,973 households) of respondents personally heard unfair criticism of Israel by personal acquaintances in Miami in the past year.
$\checkmark$ Omitted from this analysis are the 5\% of respondents who responded "don't know" to this question.

Comparisons Among Population Subgroups. Table 12-7 shows that, overall, 20\% of respondents personally heard unfair criticism of Israel by personal acquaintances in Miami in the past year. The percentage is much higher for respondents (in):

- who experienced anti-Semitism in Miami in the past year (44\%)
- who perceive a great deal of anti-Semitism in Miami (38\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (32\%)

The percentage is much lower for respondents:

- who perceive no anti-Semitism in Miami (10\%)

## Perception of Unfair Criticism of Israel IN MIAMI

Table 12-8 shows that 12\% of respondents in Jewish households in Miami perceive a great deal of criticism of Israel in Miami that they would consider unfair; 30\%, a moderate amount; $36 \%$, a little; and $22 \%$, none at all. In total, $42 \%$ of respondents perceive a great deal/moderate amount of criticism of Israel in Miami that they would consider unfair.
$\checkmark$ Omitted from this analysis are the 18\% of respondents who responded "don't know" to this question.

Comparisons Among Population Subgroups. Table 12-8 shows that, overall, 42\% of respondents perceive a great deal/moderate amount of criticism of Israel in Miami that they would consider unfair. The percentage is much higher for respondents (in):

- who personally heard unfair criticism of Israel by personal acquaintances in Miami in the past year (74\%)
- who perceive a great deal (90\%) and a moderate amount of anti-Semitism in Miami (68\%)
- Holocaust survivor households (56\%)
- elderly single households (52\%)

The percentage is much lower for respondents (in):

- who perceive a little (30\%) and none at all anti-Semitism in Miami (13\%)
- households in South Beach (27\%)
- FSU households (20\%)
- households in residence in Miami for 0-4 years (22\%) and 5-9 years (32\%)
- under age 35 (28\%) and age 35-49 (29\%)

${ }^{1}$ Respondents who perceive no unfair criticism of Israel in Miami were assumed not to have heard any unfair criticism of Israel by personal acquaintances in Miami in the past year.
Note: Respondents who replied "don't know" to this question are omitted from the analysis.

## Holocaust Survivors and CHILDREN AND GRANDCHILDREN OF SURVIVORS

Respondents in Jewish households in Miami were asked whether each born or raised Jewish adult in the household considered himself/herself to be a Holocaust survivor or someone who between 1933 and 1945 fled an area that came under NAZI rule or influence (survivor), a child of a survivor, or a grandchild of a survivor. The question about being a survivor was only asked of and about adults who are at least 68 years old and foreign born.

The definition of survivor is similar to that used in NJPS 2000-01, the 2011 New York study and the 2011 Cleveland study. It is also consistent with the definition used by the Claims Conference (The Conference on Jewish Material Claims Against Germany). Note that in all the other communities included in Table 12-10 respondents were asked whether each born or raised Jewish adult in the household considered himself/herself to be a Holocaust survivor.

Table 12-9 shows that 3\% (1,838 households) of households contain a survivor, 9\% (5,013 households) contain a child of a survivor, and $16 \%$ ( 9,023 households) contain a grandchild of a survivor. Overall, $23 \%$ ( 12,922 households) of households contain either a survivor, a child of a survivor, or a grandchild of a survivor.
$32 \%$ of households in The Beaches and $25 \%$ of households in North Dade contain a survivor or a child or grandchild of a survivor, compared to $15 \%$ of households in South Dade.

2\% (2,076 adults) of Jewish adults consider themselves to be survivors, 6\% (5,734 adults) consider themselves to be children of survivors, and $11 \%$ ( 10,776 adults) consider themselves to be grandchildren of survivors.

Community Comparisons. Table $\mathbf{1 2 - 1 0}$ shows the results in comparison with other Jewish communities.

Note that estimates of the percentage and number of survivors should be treated as minimum estimates for the following reasons. First, some survivors live in nursing homes without their own telephone numbers and are therefore excluded from the Telephone Survey. Second, survivors are probably over-represented among respondents who refused to admit being Jewish when called "out of the blue" and asked if they are Jewish by the Telephone Survey. Third, survivors, who are age 68 and over, are probably also more likely to be over-represented among "ineligible respondents," that is, among respondents who were unable to complete the Telephone Survey due to health reasons (such as hearing and mental impairments).

Used the Internet for Jewish-Related Information in the Past Year. ..... 13-14

## READERSHIP OF THE Miami Herald and El Nuevo Herald

Table $\mathbf{1 3 - 2}$ shows that in the past week $56 \%$ ( 31,248 households) of respondents in Miami read the Miami Herald or El Nuevo Herald either in print or online. 68,433 persons live in these households.

49\% (27,015 households) of households read the Miami Herald in print. 57,002 persons live in these households.

14\% (7,575 households) of households read the Miami Herald online. 19,695 persons live in these households.

Among Hispanic households, only 46\% read the Miami Herald or El Nuevo Herald either in print or online. 13\% read El Nuevo Herald in print and 6\% read El Nuevo Herald online.

## Comparisons Among Population Subgroups.

## Read Some Version of the Miami Herald or El Nuevo Herald

Table 13-2 shows that, overall, 56\% of Jewish respondents read the Miami Herald or Nuevo Herald in print. The percentage is much higher for respondents in:

- households in West Kendall (70\%) and East Kendall (71\%)
- households age 65-74 (67\%) and age 75 and over (72\%)
- elderly couple households (77\%)
- Reform households (66\%)
- households who donated under \$100 (70\%), \$100-\$500 (70\%), and \$500 and (77\%) over to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- South Beach (46\%)
- FSU households (16\%), Hispanic households (46\%), Sephardic households (40\%), Israeli households (29\%), and Holocaust survivor households (36\%)
- under age 35 (30\%) and age 35-49 (35\%)
- households with children (36\%) and non-elderly single households (34\%)
- Orthodox households (36\%)
- conversionary in-married households (45\%)
- Chabad households (44\%)
- households who were not asked to donate to the Jewish Federation in the past year (44\%)

## Read the Miami Herald in Print

Overall, 49\% of Jewish respondents read the Miami Herald in print. The percentage is much higher for respondents (in):

- households in West Kendall (67\%)
- age 65-74 (62\%) and age 75 and over (69\%)
- elderly couple households (72\%) and elderly single households (63\%)
- households who donated under \$100 (64\%), \$100-\$500 (61\%), and \$500 and (68\%) over to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- NE South Dade (38\%) and South Beach (25\%)
- FSU households (12\%), Hispanic households (28\%), Sephardic households (26\%), Israeli households (23\%), and Holocaust survivor households (32\%)
- under age 35 (13\%) and age 35-49 (24\%)
- households with children (26\%) and non-elderly single households (20\%)
- Orthodox households (30\%)
- conversionary in-married households (38\%)
- households who attended Chabad in the past year (35\%)
- households who were not asked to donate to the Jewish Federation in the past year (35\%)

## Read the Miami Herald Online

Overall, $14 \%$ of respondents read the Miami Herald online The percentage is much higher for respondents in:

- households in East Kendall (26\%) and South Beach (29\%)
- households earning \$200,000 and over (24\%)

The percentage is much lower for respondents (in):

- FSU households (4\%)
- age 75 and over (3\%)

## Belong to an Online Jewish Group or List

T
able 13-3 shows that 22\% (12,310 households) of respondents in Miami belong to an online group or list-such as those hosted by Facebook, Yahoo, Google, or Twitter-that is Jewish in some way.

Comparisons Among Population Subgroups. Table 13-3 shows that, overall, 22\% respondents belong to an online Jewish group or list. The percentage is much higher for respondents (in):

- households in East Kendall (32\%), Northeast South Dade (37\%), and South Beach (37\%)
- Hispanic households (35\%)
- under age 35 (54\%) and age 35-49 (38\%)
- households with children (34\%) and non-elderly single households (44\%)
- Orthodox households (32\%)
- households who attended Chabad in the past year (36\%)
- Jewish organization member households (35\%)

The percentage is much lower for respondents (in):

- Holocaust survivor households (2\%)
- age 65-74 (10\%) and age 75 and over (7\%)
- elderly couple households (8\%) and elderly single households (9\%)

## Used The Internet for Jewish-RELATED Information in the Past Year

The Internet is a medium for both communication and education in the Jewish community. Table $13-4$ shows that $63 \%$ of Jewish respondents in Miami used the Internet for Jewish-related information in the past year, including 43\% who used the Internet for information about the Miami Jewish community (local Jewish-related information). 15\% of respondents visited the Jewish Federation website (www.JewishMiami.org.) in the past year.

Community Comparisons. The comparisons of Internet usage with other local Jewish communities are impacted significantly by the year of the study, as Internet usage has been increasing for all purposes over the past 20 years.

Table 13-5 shows that the 63\% who used the Internet for Jewish-related information in the past year is the second highest of about 25 comparison Jewish communities and compares to $71 \%$ in Cleveland, $58 \%$ in Washington, $34 \%$ in West Palm Beach, and 29\% in South Palm Beach. The 63\% compares to $35 \%$ in 2004. The $63 \%$ compares to $40 \%$ nationally.

Table 13-6 shows that the $43 \%$ who used the Internet for local Jewish-related information in the past year is the highest of about 15 comparison Jewish communities and compares to $36 \%$ in Washington, 11\% in West Palm Beach, and 9\% in South Palm Beach. The $43 \%$ compares to $14 \%$ in 2004.

Table 13-7 shows that the $15 \%$ who visited the local Jewish Federation website in the past year is the highest of about 15 comparison Jewish communities and compares to 4\% in West Palm Beach and 3\% in South Palm Beach. The 15\% compares to 5\% in 2004.

## Comparisons Among Population Subgroups.

Used the Internet for Jewish-Related Information in the Past Year

Table 13-4 shows that, overall, 63\% of respondents used the Internet for Jewish-related information in the past year. The percentage is much higher for respondents (in):

- NE South Dade (77\%) and South Beach (77\%)
- Hispanic households (83\%), Sephardic household (75\%), and Israeli households (75\%)
- under age 35 (89\%) and age 35-49 (82\%)
- households with children (83\%), households with only adult children (77\%), and non-elderly single households (78\%)
- households earning an annual income of \$100,000-\$200,000 (74\%) and \$200,000 and over (77\%)
- Orthodox households (80\%)
- conversionary in-marriages (74\%)
- synagogue member households ( $76 \%$ ), households who attended Chabad in the past year (81\%), JCC member households (80\%), and Jewish organization member households (75\%)
- households in which an adult visited Israel on a Jewish trip (76\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (81\%)

The percentage is much lower for respondents (in):

- FSU households (49\%) and Holocaust survivor households (35\%)
- age 75 and over (32\%)
- elderly single households (34\%)
- households earning an annual income under $\$ 25,000(50 \%)$
- households in which no adult visited Israel (48\%)

## Used the Internet for Local Jewish-Related Information in the Past Year

Table 13-4 shows that, overall, $43 \%$ of respondents used the Internet for local Jewishrelated information in the past year. The percentage is much higher for respondents (in):

- NE South Dade (57\%), North Beach (55\%), and South Beach (65\%)
- Hispanic households ( $58 \%$ ), Sephardic household (54\%), and Israeli households (55\%)
- under age 35 ( $71 \%$ ) and age 35-49 (62\%)
- households with children (65\%) and non-elderly single households (58\%)
- households earning an annual income of \$100,000-\$200,000 (53\%)
- Orthodox households (59\%)
- synagogue member households ( $76 \%$ ), households who attended Chabad in the past year (81\%), JCC member households (60\%), and Jewish organization member households (75\%)
- conversionary in-married households (56\%)
- synagogue member households ( $56 \%$ ), households who attended Chabad in the past year (63\%), JCC member households (60\%), and Jewish organization member households (58\%)
- households in which an adult visited Israel on a Jewish trip (54\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (69\%)

The percentage is much lower for respondents (in):

- households in West Kendall (31\%)
- Holocaust survivor households (21\%)
- age 75 and over (16\%)
- elderly couple households (33\%) and elderly single households (20\%)
- households earning an annual income under $\$ 25,000(31 \%)$
- Just Jewish households (31\%)

## Visited the Jewish Federation Website in the Past Year

Table 13-4 shows that, overall, $15 \%$ of respondents visited the Jewish Federation website in the past year. The percentage is much higher for respondents (in):

- under age 35 (28\%)
- households who attended Chabad in the past year (26\%) and Jewish organization member households (26\%)
- households who donated \$100-\$500 (25\%) and \$500 and over (26\%) to the Jewish Federation in the past year

(Deuteronomy 16:20)

## Definitions and Methodological Issues

## Definitions:

(1) Jewish Federation refers to the Greater Miami Jewish Federation, unless otherwise specified.
(2) Other Jewish Federations refers to Jewish Federations other than the Greater Miami Jewish Federation (or the Local Jewish Federation).
(3) Other Jewish Charities refers to Jewish charities other than the Greater Miami Jewish Federation (or the Local Jewish Federation) and Other Jewish Federations. Donations to Other Jewish Charities exclude membership dues to synagogues, Jewish Community Centers, and Jewish organizations, tuition for Jewish education programs, and Israel Bond purchases.

4 Non-Jewish Charities refers to charities that are not specifically Jewish.
© Local Jewish Federation refers to the Jewish Federation in each comparison Jewish community, including Miami.

6 Any Jewish Federation (sometimes referred to as Jewish Federations) includes the Greater Miami Jewish Federation (or the Local Jewish Federation) and Other Jewish Federations.
(7) Any Jewish Charity (sometimes referred to as Jewish Charities) includes Any Jewish Federation and Other Jewish Charities.

8 Any Charity includes Any Jewish Charity and Non-Jewish Charities.

## Methodological Issues:

First, when examining comparisons to other Jewish communities of the percentages of households in Miami who donated to charities in the past year by the level of donations, the reader is cautioned to consult the tables for the year in which each community completed its study. These comparisons do not account for geographic variations in cost of living or for inflation.

Second, when examining the results in this Chapter, the comparisons of Miami with other Jewish communities should be interpreted in light of the significant economic downturn in the economy that started in 2008.

Third, households who "don't know" whether they donated to charities in the past year were assumed not to have donated. Households who "don't know" whether they were asked to donate to the Jewish Federation in the past year were assumed not to have been asked to donate. This methodology applies to all community studies completed by this author. (See Table 1-2 for a designation of such communities.) Other researchers have not always been clear in their reports regarding the treatment of missing data.

Fourth, the percentages of households who donated to charities in the past year may differ slightly from one section of this Chapter to another, particularly for some of the comparison Jewish communities. These differences are due to missing data (due to item non-response on the questionnaire), which are treated differently in different studies.

Fifth, when examining the results in this Chapter, it should be noted that some households may overstate their level of donations to charities in the past year, even in an anonymous survey.

## Donated to Charities in the Past Year

This section discusses the overall levels of donations to charities made by Jewish households in Miami in the past year.

Table 14-1 shows that $32 \%$ (17,991 households) of households reported that they donated to the Greater Miami Jewish Federation (Jewish Federation) in the past year. (See the "Results of the Jewish Federation Survey-Donated to the Jewish Federation in the Past Year" section in this Chapter for a comparison with the percentage of households who donated according to the Jewish Federation Survey.) 8\% of households reported that they donated to Other Jewish Federations in the past year; 47\%, to Other Jewish Charities; and 65\%, to Non-Jewish Charities.

68\% of households reported that they did not donate to the Jewish Federation $\mathbf{1}$ in the past year, $16 \%$ donated under \$100, $9 \%$ donated $\$ 100-\$ 500$, and $7 \%$ donated $\$ 500$ and over, including 5\% who donated \$1,000 and over.

92\% of households reported that they did not donate to Other Jewish Federations $(2$ in the past year, $3 \%$ donated under $\$ 100,2 \%$ donated $\$ 100-\$ 500$, and $3 \%$ donated $\$ 500$ and over, including $2 \%$ who donated $\$ 1,000$ and over.
$53 \%$ of households reported that they did not donate to Other Jewish Charities 8 in the past year, $15 \%$ donated under $\$ 100,17 \%$ donated $\$ 100-\$ 500$, and $14 \%$ donated $\$ 500$ and over, including $10 \%$ who donated $\$ 1,000$ and over.
$35 \%$ of households reported that they did not donate to Non-Jewish Charities 4 in the past year, $28 \%$ donated under \$100, $22 \%$ donated $\$ 100-\$ 500$, and $15 \%$ donated $\$ 500$ and over, including $9 \%$ who donated $\$ 1,000$ and over.

Table 14-24 shows that 37\% of households reported that they donated to Any Jewish Federation 6 in the past year.

Table 14-18 shows that 61\% of households reported that they donated to Any Jewish Charity 6 in the past year.

Table 14-24 shows that 79\% of households reported that they donated to Any Charity $\boldsymbol{7}$ in the past year.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

TABLE 14-1

| $\$ 1,000$ and over | $5.1 \%$ | $1.8 \%$ | $9.7 \%$ | $8.9 \%$ |

Note: See page 14-2 for an explanation of $\mathbf{1}, \boldsymbol{( 2}, \boldsymbol{3}$, and 4.

## Jewish Federation Market Segments In the Past Year

Respondents in Jewish households in Miami were asked whether their households donated to the Greater Miami Jewish Federation (Jewish Federation) in the past year. If their households did not donate, the respondents were asked whether the Jewish Federation contacted them in the past year for the purpose of asking their households to donate. Table 14-2 shows the three Jewish Federation Market Segments developed from these two questions:
(1) Donated to Jewish Federation (32\%): Includes households who reported that they donated to the Jewish Federation in the past year.
(3 Asked, Did Not Donate (20\%): Includes households who reported that the Jewish Federation asked them to donate in the past year but they did not donate.
(3) Not Asked (47\%): Includes households who reported that they did not donate to the Jewish Federation in the past year and were not asked to donate.

An additional measure is calculated from the first two Jewish Federation market segments defined above:
(4) Percentage of Households Asked Who Did Not Donate (39\%): Two groups of households were asked to donate to the Jewish Federation in the past year: the $32 \%$ who donated (all of whom are "assumed" to have been asked to donate) and the $20 \%$ who were asked but did not donate. The percentage of households asked who did not donate is calculated by dividing the $20 \%$ of households who were asked but did not donate (©) by the $52 \%(32 \%+20 \%)$ of households who were asked to donate (0+(2).

Community Comparisons. Table 14-3 shows that the $47 \%$ who were not asked to donate to the Local Jewish Federation in the past year is about average among about 40 comparison Jewish communities and compares to $57 \%$ in West Palm Beach, $55 \%$ in both South Palm Beach and Washington, and 48\% in Broward. The 47\% compares to $44 \%$ in 2004 and $51 \%$ in 1994. The $47 \%$ compares to 64\% nationally for Any Jewish Federation.

The $39 \%$ of households asked who did not donate to the Local Jewish Federation in the past year is the highest of about 40 comparison Jewish communities and compares to $27 \%$ in Washington, 20\% in West Palm Beach, 17\% in South Palm Beach, and 14\% in Broward. The $39 \%$ compares to $21 \%$ in 2004 and $24 \%$ in 1994. The $39 \%$ compares to $24 \%$ nationally for Any Jewish Federation.

See Table 14-7 for a comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation in the past year. The comparison is made in that table because the data for many more comparison Jewish communities are available in Table 14-7, which shows the level of donations to the Jewish Federation in the past year, than in Table 14-3, which shows Jewish Federation market segments in the past year. (Fewer community studies have asked market segment questions.)

Age of Head of Household. Table 14-4 shows that the $15 \%$ of households under age 35 who donated to the Local Jewish Federation in the past year is about average among about 40 comparison Jewish communities and compares to $24 \%$ in Cleveland, $12 \%$ in Atlanta, 11\% in both Broward and Washington, 10\% in New York, 9\% in South Palm Beach, and 5\% in West Palm Beach. The 15\% compares to 23\% in 2004 and 28\% in 1994. The 15\% compares to 9\% nationally for Any Jewish Federation.

The 24\% of households age 35-49 who donated to the Local Jewish Federation in the past year is well below average among about 45 comparison Jewish communities and compares to 37\% in Cleveland, 30\% in Broward, 29\% in Washington, 21\% in Atlanta, 19\% in South Palm Beach, 18\% in West Palm Beach, and 14\% in New York. The 24\% compares to $40 \%$ in 2004 and $34 \%$ in 1994. The $24 \%$ compares to $21 \%$ nationally for Any Jewish Federation.

The 34\% of households age 50-64 who donated to the Local Jewish Federation in the past year is well below average among about 45 comparison Jewish communities and compares to $46 \%$ in both Cleveland and Washington, 36\% in Broward, 27\% in Atlanta, 25\% in South Palm Beach, 24\% in New York, and 23\% in West Palm Beach. The 34\% compares to $41 \%$ in 2004 and $36 \%$ in 1994. The 34\% compares to 30\% nationally for Any Jewish Federation.

The 38\% of households age 65-74 who donated to the Local Jewish Federation in the past year is well below average among about 45 comparison Jewish communities and compares to 54\% in Washington, 49\% in Broward, 40\% in Cleveland, 35\% in South Palm Beach, 33\% in West Palm Beach, 29\% in New York, and 25\% in Atlanta. The 38\% compares to $53 \%$ in 2004 and $47 \%$ in 1994. The $38 \%$ compares to $41 \%$ nationally for Any Jewish Federation.

The $40 \%$ of households age 75 and over who donated to the Local Jewish Federation in the past year is the fifth lowest of about 45 comparison Jewish communities and compares to $75 \%$ in Cleveland, $63 \%$ in Atlanta, $59 \%$ in Broward, $50 \%$ in West Palm Beach, $47 \%$ in South Palm Beach, 44\% in Washington, and 42\% in New York. The 40\% compares to 51\% in 2004 and 49\% in 1994. The 40\% compares to 55\% nationally for Any Jewish Federation.

The $39 \%$ of households age 65 and over who donated to the Local Jewish Federation in the past year is the sixth lowest of about 45 comparison Jewish communities and compares to 59\% in Cleveland, 55\% in Broward, 49\% in Washington, 44\% in Atlanta, 43\% in both South Palm Beach and West Palm Beach, and 37\% in New York. The 39\% compares to $52 \%$ in 2004 and $48 \%$ in 1994. The $39 \%$ compares to $49 \%$ nationally for Any Jewish Federation.

Perception of Jewish Federation. Table 14-5 shows that 35\% of respondents who are very/somewhat familiar with the Jewish Federation in households who were asked but did not donate to the Jewish Federation in the past year perceive the Jewish Federation as fair/poor. The $35 \%$ is about average among about 35 comparison Jewish communities and compares to $33 \%$ in Broward, 31\% in South Palm Beach, 18\% in Washington, and 12\% in West Palm Beach. The 35\% compares to 25\% in 2004 and 22\% in 1994.

Note that the sample sizes shown in Table 14-5 are generally very small and that only differences between communities of at least 20 percentage points should be considered important. Note as well that the respondent who reported his/her perception of the Local Jewish Federation may not have been the household member responsible for making donations to the Local Jewish Federation in the past year.

Comparisons Among Population Subgroups.

## Donated to the Jewish Federation in the Past Year ©

Table 14-2 shows that, overall, 32\% of households donated to the Jewish Federation in the past year. The percentage is much higher in:

- Holocaust survivor households (47\%)
- households with only adult children (43\%) and elderly couple households (42\%)
- households earning an annual income of \$200,000 and over (45\%)
- synagogue member households (47\%), JCC member households (51\%), and Jewish organization member households (45\%)
- households in which the respondent is very familiar with the Jewish Federation (57\%)
- households in which the respondent is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent (57\%)
- households in which an adult visited Israel on a Jewish trip (42\%)

The percentage is much lower in:

- households in South Beach (18\%)
- FSU households (16\%)
- households in residence in Miami for 0-4 years (13\%)
- households under age 35 (15\%)
- non-elderly single households (15\%)
- households earning an annual income under \$25,000 (18\%)
- Just Jewish households (22\%)
- intermarried households (21\%)
- households in which the respondent is not at all familiar with the Jewish Federation (15\%)
- households in which the Jewish respondent is not emotionally attached to Israel (16\%)

Not Asked to Donate to the Jewish Federation in the Past Year 3
Table 14-2 shows that, overall, 47\% of households were not asked to donate to the Jewish Federation in the past year. The percentage is much higher in:

- part-year households (67\%)
- households in Middle Beach (59\%) and South Beach (71\%)
- FSU households (60\%) and Israeli households (60\%)
- households in residence in Miami for 0-4 years (82\%) and 5-9 years (60\%)
- households under age 35 (71\%)
- non-elderly single households (65\%)
- households earning an annual income under \$25,000 (59\%)
- intermarried households (62\%)
- households in which the respondent is not at all familiar with the Jewish Federation (69\%)
- households in which the Jewish respondent is not emotionally attached to Israel (64\%)

The percentage is much lower in:

- households in North Dade Core West (35\%), West Kendall (32\%) and North Beach (36\%)
- Holocaust survivor households (37\%)
- households with only adult children (30\%)
- synagogue member households (37\%) and JCC member households (34\%)
- households in which the respondent is very familiar with the Jewish Federation (21\%)
- households who are very or somewhat familiar with the Jewish Federation and perceive the Jewish Federation as excellent (27\%) or fair/poor (29\%)

Percentage of Households Asked Who Did Not Donate to the Jewish Federation in the Past Year ${ }^{4}$

Table 14-2 shows that, overall, 39\% of households who were asked but did not donate to the Jewish Federation in the past year. The percentage is much higher in:

- households in North Dade Core West (49\%)
- FSU households (61\%)
- non-elderly single households (59\%)
- households earning an annual income under $\$ 25,000$ (56\%) and $\$ 25,000$ \$50,000 (54\%)
- Just Jewish households (52\%)
- households in which the respondent is not at all familiar with the Jewish Federation (50\%)
- households in which the respondent is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as fair/poor (50\%)
- households in which the Jewish respondent is not emotionally attached to Israel (56\%)

The percentage is much lower in:

- part-year households (28\%)
- households in East Kendall (15\%) and Middle Beach (26\%)
- Holocaust survivor households (25\%)
- elderly couple households (29\%)
- households earning an annual income of \$200,000 and over (23\%)
- synagogue member households (26\%), JCC member households (23\%), and Jewish organization member households (26\%)
- households in which the respondent attended a Jewish day school as a child for 1-6 years (29\%)
- households in which the respondent is very familiar with the Jewish Federation (28\%)
- households in which the respondent is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent (23\%)

${ }^{1}$ In most communities, data are calculated from very small sample sizes and the results should be treated with caution. Sample sizes between 25 and 49 are shown in boldface type. Sample sizes of less than 25 are shown in boldface type and in a large font.

## DONATED TO THE JEWISH FEDERATION IN THE PAST YEAR

Table 14-6 shows that $68 \%$ of Jewish households in Miami did not donate to the Greater Miami Jewish Federation (Jewish Federation) in the past year, 16\% donated under $\$ 100$, $9 \%$ donated $\$ 100-\$ 500$, and $7 \%$ donated $\$ 500$ and over, including $5 \%$ who donated \$1,000 and over. In total, 32\% of households donated to the Jewish Federation in the past year.

Community Comparisons. Table $14-7$ shows that the $32 \%$ who donated to the Local Jewish Federation in the past year is below average among about 55 comparison Jewish communities and compares to 45\% in Cleveland, 43\% in Broward, 37\% in South Palm Beach, 35\% in West Palm Beach, 32\% in Washington, 25\% in Atlanta, and 24\% in New York. The $32 \%$ compares to $42 \%$ in 2004 and $37 \%$ in 1994. The $32 \%$ compares to $25 \%$ nationally for Any Jewish Federation (Jewish Federations including the Local Jewish Federation).

The right hand side of Table 14-7 examines only households who donated to the Local Jewish Federation in the past year. Of households who donated to the Local Jewish Federation in the past year, the $49 \%$ who donated under $\$ 100$ is above average among about 45 comparison Jewish communities and compares to $77 \%$ in Broward, $62 \%$ in South Palm Beach, 54\% in West Palm Beach, 39\% in both Cleveland and New York, 37\% in Washington, and 14\% in Atlanta. The 49\% compares to $51 \%$ in 2004 and 42\% in 1994. The 49\% compares to 50\% nationally for Any Jewish Federation.

Of households who donated to the Local Jewish Federation in the past year, the 16\% who donated $\$ 1,000$ and over is about average among about 50 comparison Jewish communities and compares to 26\% in Atlanta, 20\% in Cleveland, 13\% in New York, 10\% in both South Palm Beach and West Palm Beach, 8\% in Washington, and 4\% in Broward. The $16 \%$ compares to $12 \%$ in 2004 and $13 \%$ in 1994. The $16 \%$ compares to $9 \%$ nationally for Any Jewish Federation.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

Comparisons Among Population Subgroups. The percentage of households who donated to the Jewish Federation in the past year is discussed in the "Jewish Federation Market Segments in the Past Year" section in this Chapter. This section examines the percentage who donated $\$ 100$ and over to the Jewish Federation in the past year.

Table 14-6 shows that, overall, $16 \%$ of households donated $\$ 100$ and over to the Jewish Federation in the past year. The percentage is much higher in:

- households in East Kendall (32\%) and North Beach (28\%)
- households earning an annual income of $\$ 200,000$ and over (37\%)
- synagogue member households (32\%), JCC member households (31\%), and Jewish organization member households (29\%)
- households in which the respondent is very familiar with the Jewish Federation (40\%)
- households in which the respondent is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent (36\%)
- households in which an adult visited Israel on a Jewish trip (29\%)

The percentage is much lower in:

- households under age 35 (5\%)
- non-elderly single households (6\%)
- households earning an annual income under \$25,000 (4\%) and \$25,000-\$50,000 (5\%)
- households in which the respondent is not at all familiar with the Jewish Federation (3\%)
- households in which the Jewish respondent is not emotionally attached to Israel (4\%)

| NJPS ${ }^{2}$ | 2000 | 25\% | 50\% | 35 | 6 | 9 |

${ }^{1}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.
${ }^{2}$ NJPS 2000 data are for the more Jewishly-connected sample and reflect the percentage of households who donated to Any Jewish Federation, not just the Local Jewish Federation.
Note: Excludes households who donated only to Other Jewish Federations. Such donations to Other Jewish Federations only are shown in Table 14-10.

# Profile of Households by Jewish Federation Market Segments IN THE PAst Year 

While Table 14-2 shows the percentage of Jewish households in each population subgroup in Miami who were in each Jewish Federation market segment in the past year, Table 14-8 shows profiles of households who were in each Jewish Federation market segment in the past year: 1 donated to Jewish Federation; (2) asked, did not donate; and (3) not asked. (See page 14-6 for an explanation of ©, (2, and (3.)

As an example of the interpretation of this table, note that while Table 14-2 shows that $31 \%$ of households who live in North Dade donated to the Greater Miami Jewish Federation (Jewish Federation ) in the past year, Table 14-8 shows that $52 \%$ of households who donated to the Jewish Federation in the past year live in North Dade. Note that the discussion below compares differences among the Jewish Federation market segments, not within each market segment. Only some of the important differences among the Jewish Federation market segments are discussed below.

## Geographic Profile

- households who donated are more likely to live in Miami for 20 or more years
- households who were not asked to donate are more likely to live in Miami for 0-4 years and less likely to live in Miami for 20 or more years

## Demographic Profile

- households who donated are less likely to be age 35-49 and more likely to be age 65 and over and age 75 and over
- households who donated are less likely to be households with children and more likely to be elderly couple households
- households who donated are more likely to earn an annual income of \$200,000 and over

## Religious Profile

- households who donated are more likely to be Conservative and less likely to be Just Jewish
- households who were not asked to donate and who were asked but did not donate are more likely to be Just Jewish
- households who donated are generally more likely to observe religious practices and exhibit Jewish behaviors
- households who donated are less likely and households who were not asked to donate are more likely to be intermarried

## Membership Profile

- households who donated are more likely to be synagogue member, JCC member, and Jewish organization member households and were more likely to participate in a JCC program in the past year
- households who were not asked to donate are less likely to be synagogue member, JCC member, and Jewish organization member households and were less likely to participate in a JCC program in the past year
- households who donated are more likely to contain a Jewish respondent who feels very much part of the Miami Jewish community
- households who were not asked to donate are more likely to contain a Jewish respondent who feels not very much/not at all part of the Miami Jewish community

## Formal and Informal Jewish Education of Adults

- households who donated are more likely to contain a respondent who participated in a Jewish youth group as a teenager

## Familiarity with and Perception of the Jewish Federation

- households who donated are more likely to contain a respondent who is very familiar and less likely to contain a respondent who is not at all familiar with the Jewish Federation
- households who were not asked to donate are less likely to contain a respondent who is very familiar and more likely to contain a respondent who is not at all familiar with the Jewish Federation
- households who donated are more likely to contain a respondent who is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent and less likely to contain a respondent who perceives the Jewish Federation as fair/poor

## Israel

- households who donated are more likely to contain an adult who visited Israel on a Jewish trip
- households who donated are more likely to contain a Jewish respondent who is extremely/very emotionally attached to Israel

## Philanthropic Profile

- households who donated were more likely to donate to Other Jewish Charities in the past year
- households who donated were more likely to donate to Non-Jewish Charities in the past year and were more likely to donate
- households who donated are more likely to contain a Jewish respondent who volunteered for Jewish organizations in the past year

| Base: Jewish Households |  |  |  |
|  |  | Did Not Donate |  |
| Population Subgroup |  | Asked (2) | Not Asked (3 |
| Volunteered in the Past Year |  |  |  |
| Jewish Organization | 37.2\% | 21.2\% | 19.8\% |
| Non-Jewish Organization | 33.7\% | 25.6\% | 25.8\% |
| Sample Size | 924 | 289 | 746 |
| Number of Households | 17,991 | 11,307 | 26,402 |
| Note: Sample sizes and numbers of households are lower for Type of Marriage (based on number of married couples), Respondent Participated in Hillel While in College (Excluding High Holidays) (based on number of households in which a born Jewish adult attended college), and Perception of Jewish Federation (based on number of households in which the respondent is very/somewhat familiar with the Jewish Federation). In addition, sample sizes are lower for Household Income, Donated to Other Jewish Charities in the Past Year, and Donated to Non-Jewish Charities in the Past Year due to missing responses. <br> Note: See page 13-6 for an explanation of (1), (2) and (3). |  |  |  |

## Profile of Households by Level of Donations to the Jewish Federation in the Past Year

While Table 14-6 shows the percentage of Jewish households in each population subgroup in Miami who donated to the Greater Miami Jewish Federation (Jewish Federation) in the past year by the level of donations, Table 14-9 shows profiles of households by the level of donations to the Jewish Federation in the past year: (1) households who did not donate, (2 households who donated under \$100, 3 households who donated $\$ 100-\$ 500$, and 4 households who donated $\$ 500$ and over. As an example of the interpretation of this table, note that while Table 14-6 shows that 8\% of households who live in North Dade donated \$100-\$500 to the Jewish Federation in the past year, Table 14-9 shows that $50 \%$ of households who donated $\$ 100-\$ 500$ to the Jewish Federation in the past year live in North Dade. Note that the discussion below compares differences among the levels of donations, not within each level. Only some of the important differences among the Jewish Federation donations levels are discussed below.

## Geographic Profile

- households who donated $\$ 500$ and over are less likely to live in North Dade
- households who donated under \$100 are less likely to live in The Beaches
- households who did not donate are more likely to live in Miami for 0-4 years and 10-19 years and less likely to live in Miami for 20 or more years
- households who donated $\$ 500$ and over are more likely to live in single family homes

## Demographic Profile

- households who did not donate are more likely to be under age 50 and less likely to be age 75 and over
- households who donated under \$100 are less likely to be age 35-49
- households who did not donate are more likely to be households with children and non-elderly single households and less likely to be elderly couple households
- households who donated $\$ 100-\$ 500$ are more likely to be elderly couple households
- households who donated under $\$ 100$ are more likely to be elderly single households
- households who donated \$100-\$500 and \$500 and over are less likely to earn an annual income under \$50,000 and more likely to earn \$100,000 and over

## Religious Profile

- households who did not donate are less likely to be Conservative and more likely to be Just Jewish
- households who did not donate are generally less likely to observe religious practices and exhibit Jewish behaviors
- households who donated under \$100 are generally less likely to observe religious practices and exhibit Jewish behavior than are households who donated \$100$\$ 500$ and $\$ 500$ and over
- households who did not donate are more likely and households who donated \$100-\$500 and \$500 and over are less likely to be intermarried

## Membership Profile

- households who did not donate are less likely to be synagogue member, JCC member, and Jewish organization member households and were less likely to participate in a JCC program in the past year
- households who donated \$100-\$500 and \$500 and over are more likely to be synagogue member, JCC member, and Jewish organization member households and were more likely to participate in a JCC program in the past year
- households who did not donate are less likely and households who donated $\$ 100-\$ 500$ and $\$ 500$ and over are more likely to contain a Jewish respondent who feels very much/somewhat part of the Miami Jewish community

## Formal and Informal Jewish Education of Adults

- households who donated $\$ 100-\$ 500$ and $\$ 500$ and over are more likely to contain a respondent who attended a Jewish day school as a child for 7-12 years
- households who donated $\$ 500$ and over are more likely to contain a respondent who attended or worked at a Jewish overnight camp as a child
- households who did not donate are less likely to contain a respondent who participated in a Jewish youth group as a teenager

## Familiarity with and Perception of the Jewish Federation

- households who did not donate are less likely to contain a respondent who is very familiar and more likely to contain a respondent who is not at all familiar with the Jewish Federation
- households who donated \$100-\$500 and \$500 and over are more likely to contain a respondent who is very familiar with the Jewish Federation
- households who did not donate are less likely to contain a respondent who is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent

## Israel

- households who did not donate are less likely to contain an adult who visited Israel on a Jewish trip
- households who donated $\$ 100-\$ 500$ and $\$ 500$ and over are more likely to contain a Jewish respondent who is extremely/very emotionally attached to Israel
- households who donated $\$ 500$ and over are more likely to contain an adult who visited Israel
- households who did not donate are more likely to be not attached to Israel

## Philanthropic Profile

- households who did not donate were less likely to donate to Other Jewish Charities in the past year
- households who donated under \$100 were more likely to donate under \$100 to Other Jewish Charities in the past year
- households who donated \$100-\$500 were more likely to donate \$100-\$500 to Other Jewish Charities in the past year
- households who donated $\$ 500$ and over were more likely to donate $\$ 1.000$ and over to Other Jewish Charities in the past year
- households who did not donate were less likely to donate to Non-Jewish Charities in the past year
- households who donated under $\$ 100$ were more likely to donate under $\$ 100$ to Non-Jewish Charities in the past year
- households who donated \$100-\$500 were more likely to donate to \$100-\$500 to Non-Jewish Charities in the past year
- households who donated \$500 and over were more likely to donate \$500 and over to Non-Jewish charities in the past year
- households who did not donate and households who donated under $\$ 100$ were less likely and households who donated \$100-\$500 and \$500 and over were more likely to contain a Jewish respondent who volunteered for a Jewish organization in the past year
- households who did not donate or who donated under \$100 in the past year were less likely to volunteer for non-Jewish charities in the past year

| Number of Households | 37,709 | 8,912 | 5,013 | 4,066 |

Note: Sample sizes and numbers of households are lower for Type of Marriage (based on number of married couples), Respondent Participated in Hillel/Chabad While in College (Excluding High Holidays) (based on number of households in which a born Jewish adult attended college), and Perception of Jewish Federation (based on number of households in which the respondent is very/somewhat familiar with the Jewish Federation). In addition, sample sizes are lower for Household Income, Donated to Other Jewish Charities in the Past Year, and Donated to Non-Jewish Charities in the Past Year due to missing responses.

## Overlap Between Households Who Donated TO OTHER JEWISH FEDERATIONS AND THE GREATER MIAMI JEWISH FEDERATION IN THE PAST YEAR

Table 14-10 shows that 5\% of Jewish households in Miami donated to Other Jewish Federations but not to the Greater Miami Jewish Federation in the past year (Other Jewish Federations only); 29\% donated to the Greater Miami Jewish Federation but not to Other Jewish Federations (Local Jewish Federation only); 4\% donated to both the Greater Miami Jewish Federation and Other Jewish Federations; and 63\% did not donate to Any Jewish Federation. In total, 8\% of households donated to Other Jewish Federations in the past year.

Community Comparisons. The 5\% who donated to Other Jewish Federations only in the past year is about average among about 35 comparison Jewish communities and compares to $12 \%$ in both South Palm Beach and West Palm Beach, $7 \%$ in Broward, and $3 \%$ in Washington. The 5\% compares to 6\% in 2004 and 2\% in 1994.

The 29\% who donated to the Local Jewish Federation only in the past year is below average among about 30 comparison Jewish communities and compares to $41 \%$ in Broward, 31\% in Washington, 29\% in South Palm Beach, and 25\% in West Palm Beach. The $29 \%$ compares to $39 \%$ in 2004 and $36 \%$ in 1994.

The 4\% who donated to both the Local Jewish Federation and Other Jewish Federations in the past year is about average among about 30 comparison Jewish communities and compares to 10\% in West Palm Beach, 8\% in South Palm Beach, and $3 \%$ in both Washington and Broward. The 4\% compares to $5 \%$ in 2004 and $1 \%$ in 1994.

The 8\% who donated to Other Jewish Federations in the past year is about average among about 30 comparison Jewish communities and compares to 21\% in West Palm Beach, 20\% in South Palm Beach, 10\% in Broward, and 6\% in Washington. The 8\% compares to $11 \%$ in 2004 and 2\% in 1994.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

${ }^{1}$ In some communities, no question was asked about donations to Other Jewish Federations. If the question had been asked, the percentage of households who donated to Other Jewish Federations in the past year would likely be higher.
${ }^{2}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.

# RESULTS OF THE JEWISH FEDERATION SURVEYDONATED TO THE JEWISH FEDERATION IN THE PAST YEAR 

Table 14-2 shows that, according to the Telephone Survey, $32 \%$ (17,991 households) of Jewish households in Miami reported that they donated to the Greater Miami Jewish Federation (Jewish Federation) in the past year. Table 14-11 shows that, according to the Jewish Federation Survey, 15\% (8,079 households) of households donated to the Jewish Federation in the past year. Thus, the Telephone Survey implies that the percentage of households who donated is 18 percentage points higher than that suggested by the Jewish Federation Survey. The 15\% of households who donated according to the Jewish Federation Survey is not within the margin of error of the $32 \%$ who donated according to the Telephone Survey.

Community Comparisons. Table $\mathbf{1 4 - 1 1}$ shows that the $15 \%$ who donated to the Local Jewish Federation in the past year according to the Jewish Federation Survey is the sixth lowest of about 35 comparison Jewish communities and compares to $17 \%$ in both South Palm Beach and Broward, 16\% in West Palm Beach, and 14\% Washington. The $15 \%$ compares to $20 \%$ in both 2004 and 1994.

The 18 percentage point disparity between the percentage of households who reported that they donated to the Local Jewish Federation in the past year according to the Telephone Survey and the percentage of households who donated according to the Jewish Federation Survey is about average among about 35 comparison Jewish communities and compares to 28 percentage points in Broward, 20 percentage points in South Palm Beach, and 19 percentage points in both West Palm Beach and Washington. The 18 percentage points compares to 24 percentage points in 2004 and 17 percentage points in 1994.

Such a disparity is common in Jewish community studies. Why the disparity?
(1) Not all potential respondents cooperated with the Telephone Survey. It is likely that households who donated to the Jewish Federation in the past year constituted a disproportionately high percentage of households who responded to the Telephone Survey.
(2) Some respondents may pay for and attend events run by the Jewish Federation. They may mistakenly consider these fees to be donations to the Jewish Federation, although they are not considered to be donations by the Jewish Federation.
(3) Some respondents may confuse the Jewish Federation with the Jewish Community Center, the Jewish National Fund, the Jewish Foundation, and other Jewish organizations. As a result, they may mistakenly consider donations made to these organizations as donations to the Jewish Federation.
(4) Some respondents may confuse the Greater Miami Jewish Federation with Other Jewish Federations in other parts of Florida, particularly to the Jewish Federation of Broward County. As a result, they may mistakenly consider donations made to Other Jewish Federations as donations to the Greater Miami Jewish Federation.
(6) Some respondents may donate directly to other Jewish agencies (such as a Jewish Community Center or Jewish Community Services) and may mistakenly consider these to be donations to the Jewish Federation, although they are not considered to be donations by the Jewish Federation.
© Some respondents may define "in the past year" differently than the Jewish Federation. The Telephone Survey was conducted in January/February 2014. Respondents may have considered donations made for a different campaign year in their responses.
(7) Despite assurances to the contrary, some respondents may feel that questions concerning donations to the Jewish Federation will lead to an appeal for funds. As a result, respondents may claim to have donated to the Jewish Federation in the past year when in fact they have not.

8 Some respondents may not be the household members responsible for making donations to the Jewish Federation in the past year and may mistakenly answer the philanthropy questions without full knowledge of such donations.
© Some respondents may claim to have donated to the Jewish Federation in the past year because donating to charities is a socially-desirable action and they may wish to impress the interviewer by responding affirmatively to the philanthropy questions.
(10) The Telephone Survey's estimate of the number of Jewish households may be too high, resulting in a lower calculated percentage according to the Jewish Federation Survey.

${ }^{1}$ The Jewish Federation Survey gathered information from the local Jewish Federation concerning the number of households who donated to the Jewish Federation in the past year.

## Results of the Jewish Federation SurveyAnnual Campaign

T
able 14-12 shows data on the Annual Greater Miami Jewish Federation/UJA Campaign from 1994-2013.

Not adjusted for inflation, the Annual Campaign increased by $\$ 5.0$ million (29\%) from 17.5 million in 1994 to $\$ 22.6$ million in 2013.

Adjusted for inflation, the Annual Campaign decreased by $\$ 4.9$ million (18\%) from 27.5 million in 1994 to 22.6 million in 2013.

Adjusted for inflation, since 1994, the Annual Campaign raised a total of $\$ 520.4$ million.
The number of donors to the Annual Campaign decreased by 7,471 ( $45 \%$ ) from 16,519 in 1994 to 9,048 in 2013.

The number of Jewish households who donated to the Annual Campaign decreased by $3,070(28 \%)$ from 11,149 households in 2004 to 8,079 households in 2013.

Adjusted for inflation, the average donation per Jewish donor increased by \$827 (50\%) from \$1,666 in 1994 to \$2,493 in 2013.

Adjusted for inflation, the average donation per Jewish household who donated increased by \$337 (14\%) from \$2,455 in 2004 to \$2,792 in 2013.

The number of Jewish households in Miami decreased by 11,300 (17\%) households from 67,000 in 1994 to 55,700 in 2013.

Adjusted for inflation, the average donation per Jewish household in Miami remained about the same: \$411 in 1994 and \$405 in 2013.

Community Comparisons. Table $\mathbf{1 4 - 1 3}$ shows that the Annual Campaign of $\$ 22.6$ million is the eighth highest among about 55 comparison Jewish communities and compares to $\$ 139.9$ million in New York, $\$ 29.0$ million in Cleveland, $\$ 19.7$ million in Washington, $\$ 16.8$ million in West Palm Beach, $\$ 14.3$ million in Atlanta, $\$ 13.8$ million in South Palm Beach, and $\$ 4.0$ million in Broward. The $\$ 22.6$ million compares to $\$ 21.7$ million in 2004 and $\$ 27.5$ million in 1994.

The average donation per Jewish household of \$405 is above average among about 55 comparison Jewish communities and compares to $\$ 756$ in Cleveland, $\$ 243$ in West Palm Beach, $\$ 233$ in Atlanta, $\$ 202$ in New York, $\$ 188$ in South Palm Beach, \$179 in Washington, and \$40 in Broward. The \$405 compares to \$402 in 2004 and \$411 in 1994.

Table $14-14$ shows that, according to the Jewish Federation Survey, 27,000 households in Miami are on the Greater Miami Jewish Federation mailing list as of 2013. Thus, the Jewish Federation mailing list contains $48 \%$ of the households in the Jewish community.

The $48 \%$ is well below average among about 35 comparison Jewish communities and compares to $75 \%$ in West Palm Beach, $68 \%$ in South Palm Beach, $49 \%$ in Broward, and 44\% in Washington. The 48\% compares to 74\% in 2004 and 77\% in 1994.

TABLE 14-13
LOCAL JEWISH FEDERATION ANNUAL CAMPAIGN COMMUNITY COMPARISONS

| Community | Year | Number of Jewish Households in the Year of the Study | 2013 <br> Annual Campaign | Average Donation per Jewish Household |
| :---: | :---: | :---: | :---: | :---: |
| Middlesex | 2008 | 24,000 | \$2,003,000 | \$95 |
| Orlando | 1993 | 9,044 | \$681,000 | \$75 |
| Atlantic County | 2004 | 10,000 | \$709,000 | \$71 |
| St. Petersburg ${ }^{7}$ | 2010 | 13,500 | \$942,000 | \$70 |
| Monmouth | 1997 | 26,000 | \$1,728,000 | \$66 |
| Howard County ${ }^{8}$ | 2010 | 7,500 | \$484,000 | \$65 |
| Phoenix | 2002 | 44,000 | \$2,836,000 | \$64 |
| Las Vegas | 2005 | 42,000 | \$2,506,000 | \$60 |
| Broward ${ }^{9}$ | 2008 | 100,000 | \$4,001,000 | \$40 |

* Adjusted for inflation to 2013 dollars.
${ }^{1}$ The number of Jewish households is the number of households in the year of the study, while the campaign information is for 2013, unless otherwise indicated. To the extent that the number of Jewish households in a community has changed since the year of the study, the Average Donation per Jewish Household column may overestimate or underestimate the per household donations in 2013. Thus, Community Comparisons should be treated with caution.
${ }^{2}$ Number of Jewish Households in the Year of the Study is updated to a 2011 estimate. Data in other parts of this report are from the 1994 study.
${ }^{3}$ Number of Jewish Households in the Year of the Study is updated to a 2008 estimate. Data in other parts of this report for Essex-Morris are from the 1998 study.
${ }^{4}$ Number of Jewish Households in the Year of the Study is updated to a 2010 estimate. Data in other parts of this report for St. Paul are from the 2004 study.
${ }^{5}$ Number of Jewish Households in the Year of the Study and 2009 Annual Campaign includes the entire State of Delaware (which is served by the Jewish Federation of Delaware), not just Wilmington.
${ }_{7}^{6}$ Campaign information is for 2009.
${ }^{7}$ Number of Jewish Households in the Year of the Study is updated to a 2011 estimate. Data in other parts of this report for St. Petersburg are from the 1994 study.
${ }^{8}$ Campaign information is for 2009
${ }^{9}$ Number of Jewish Households in the Year of the Study is updated to a 2008 estimate. Data in other parts of this report for Broward are from the 1997 study.

${ }^{1}$ A Jewish Federation Survey gathered information from the Local Jewish Federation concerning the number of households on the current mailing list.

## DONATED TO OTHER JEWISH CHARITIES IN THE PAST YEAR

Table $\mathbf{1 4 - 1 5}$ shows that $53 \%$ of Jewish households in Miami did not donate to Other Jewish Charities (Jewish charities other than Jewish Federations) in the past year, $15 \%$ donated under \$100, 17\% donated \$100-\$500, and $14 \%$ donated $\$ 500$ and over, including 10\% who donated \$1,000 and over. In total, 47\% of households donated to Other Jewish Charities in the past year.

Community Comparisons. Table 14-16 shows that the $47 \%$ who donated to Other Jewish Charities in the past year is below average among about 40 comparison Jewish communities and compares to $57 \%$ in Cleveland, $55 \%$ in New York, $54 \%$ in both South Palm Beach and West Palm Beach, 53\% in Broward, 51\% in Washington, and 46\% in Atlanta. The $47 \%$ compares to $52 \%$ in 2004. The $47 \%$ compares to $40 \%$ nationally.

The right hand side of Table 14-16 examines only households who donated to Other Jewish Charities in the past year. Of households who donated to Other Jewish Charities in the past year, the $33 \%$ who donated under $\$ 100$ is below average among about 30 comparison Jewish communities and compares to 59\% in Broward, 41\% in both South Palm Beach and West Palm Beach, 36\% in Washington, and 27\% in Cleveland. The 33\% compares to $37 \%$ in 2004. The $33 \%$ compares to $34 \%$ nationally.

Of households who donated to Other Jewish Charities in the past year, the $21 \%$ who donated $\$ 1,000$ and over is the fourth highest of about 30 comparison Jewish communities and compares to $23 \%$ in Cleveland, $14 \%$ in both West Palm Beach and Washington, 13\% in South Palm Beach, and 5\% in Broward. The 21\% compares to 17\% in 2004. The $21 \%$ compares to $15 \%$ nationally.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

## Comparisons Among Population Subgroups.

## Donated to Other Jewish Charities in the Past Year

Table $\mathbf{1 4 - 1 5}$ shows that, overall, $47 \%$ of households donated to Other Jewish Charities in the past year. The percentage is much higher in:

- part-year households (67\%)
- households in North Beach (68\%) and Middle Beach (57\%)
- households with children (58\%) and non-elderly couple households (57\%)
- households earning an annual income of \$200,000 and over (65\%)
- Orthodox households (81\%)
- in-married households (58\%)
- synagogue member households (71\%), households who attended Chabad in the past year (62\%), JCC member households (68\%), and Jewish organization member households (73\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (67\%)
- households in which the respondent attended or worked at a Jewish overnight camp as a child (57\%)
- households in which the respondent participated in a Jewish youth group as a teenager (57\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (60\%)
- households in which the respondent is very familiar with the Jewish Federation (67\%)
- households in which an adult visited Israel on a Jewish trip (60\%)
- households who donated \$100-\$500 (73\%) and \$500 and over (81\%) to the Jewish Federation in the past year

The percentage is much lower in:

- households in West Kendall (35\%)
- non-elderly single households (31\%)
- households earning an annual income under \$25,000 (32\%)
- Just Jewish households (34\%)
- intermarried households (27\%)
- synagogue non-member households (33\%)
- households in which no adult attended Jewish education as a child (37\%)
- households in which the respondent is not at all familiar with the Jewish Federation (36\%)
- households in which no adult visited Israel (33\%)

Table 14-15 shows that, overall, 32\% of households donated $\$ 100$ and over to Other Jewish Charities in the past year. The percentage is much higher in:

- part-year households (51\%)
- households in North Beach (47\%) and Middle Beach (47\%)
- households age 35-49 (43\%)
- households with children (46\%)
- households earning an annual income of \$200,000 and over (60\%)
- Orthodox households (64\%)
- in-married households (45\%)
- synagogue member households (55\%), households who attended Chabad in the past year (46\%), JCC member households (51\%), and Jewish organization member households (53\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (50\%)
- households in which the respondent attended or worked at a Jewish overnight camp as a child (42\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (46\%)
- households in which the respondent is very familiar with the Jewish Federation (51\%)
- households in which an adult visited Israel on a Jewish trip (45\%)
- households who donated \$100-\$500 (62\%) and \$500 and over (75\%) to the Jewish Federation in the past year

The percentage is much lower in:

- households in West Kendall (18\%)
- non-elderly single households (19\%) and elderly single households (19\%)
- households earning an annual income under \$25,000 (32\%) and \$25,000\$50,000 (18\%)
- Just Jewish households (20\%)
- intermarried households (16\%)
- synagogue non-member households (19\%)
- households in which the respondent is not at all familiar with the Jewish Federation (21\%)
- households in which no adult visited Israel (15\%)

## Overlap Between Households Who Donated to Other Jewish Charities <br> and Jewish Federations in the Past Year

Table 14-17 shows that $23 \%$ of Jewish households in Miami donated to Other Jewish Charities but not to Any Jewish Federation in the past year (Other Jewish Charities only); 13\% donated to Any Jewish Federation but not to Other Jewish Charities (Jewish Federations only); 24\% donated to both Any Jewish Federation and Other Jewish Charities; and 40\% did not donate to Any Jewish Charity.

Community Comparisons. Table 14-17 shows that the $23 \%$ who donated to Other Jewish Charities only in the past year is the sixth highest of about 35 comparison Jewish communities and compares to $25 \%$ in Washington, $19 \%$ in both South Palm Beach and West Palm Beach, and 16\% in Broward. The 23\% compares to 19\% in 2004 and $32 \%$ in 1994. The $23 \%$ compares to $22 \%$ nationally.

The $13 \%$ who donated to Jewish Federations only in the past year is about average among about 40 comparison Jewish communities and compares to $15 \%$ in South Palm Beach, $14 \%$ in Broward, 12\% in West Palm Beach, $9 \%$ in Washington, and 2\% in Atlanta, The $13 \%$ compares to $15 \%$ in 2004 . The $13 \%$ compares to $7 \%$ nationally.

The $24 \%$ who donated to both Any Jewish Federation and Other Jewish Charities in the past year is the third lowest of about 30 comparison Jewish communities and compares to $37 \%$ in Broward, $35 \%$ in both South Palm Beach and West Palm Beach, and 28\% in Washington. The $24 \%$ compares to $35 \%$ in 2004. The $24 \%$ compares to $20 \%$ nationally.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

*Excludes households who donated to charities specifically established for September 11 and Hurricane Katrina victims.
${ }^{1}$ Includes donations to the Local Jewish Federation and Other Jewish Federations. In some communities, no question was asked about donations to Other Jewish Federations. If the question had been asked, the percentage of households who donated to Any Jewish Federation in the past year would likely be higher.
${ }^{2}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.
${ }^{3}$ NJPS 2000 data are for the more Jewishly-connected sample.

## Donated to Any Jewish Charity In the Past Year

Table $\mathbf{1 4 - 1 8}$ shows that $61 \%$ of Jewish households in Miami donated to Any Jewish Charity in the past year.

Community Comparisons. Table $\mathbf{1 4 - 1 9}$ shows that the $61 \%$ of households who donated to Any Jewish Charity in the past year is about average among about 50 comparison Jewish communities and compares to 69\% in South Palm Beach, 67\% in both West Palm Beach and Broward, 65\% in Cleveland, 60\% in Washington, 59\% in New York, and 48\% in Atlanta. The $61 \%$ compares to $67 \%$ in 2004 and $71 \%$ in 1994. The $61 \%$ compares to 49\% nationally.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

Comparisons Among Population Subgroups. Table 14-18 shows that, overall, 61\% of households donated to Any Jewish Charity in the past year. The percentage is much higher in:

- part-year households (87\%)
- households in North Beach (71\%)
- households with only adult children (73\%)
- households earning an annual income of \$200,000 and over (77\%)
- Orthodox households (86\%)
- in-married households (71\%) and conversionary in-married households (76\%)
- synagogue member households ( $83 \%$ ), households who attended Chabad in the past year (72\%), JCC member households (79\%), and Jewish organization member households (84\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (78\%)
- households in which the respondent participated in a Jewish youth group as a teenager (71\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (75\%)
- households in which the respondent is very familiar with the Jewish Federation (80\%)
- households in which the respondent is very/somewhat familiar with the Jewish Federation and perceives the Jewish Federation as excellent (74\%)
- households in which an adult visited Israel on a Jewish trip (75\%)
- households in which the Jewish respondent is extremely emotionally attached to Israel (74\%)

The percentage is much lower in:

- households in Other North Dade (50\%)
- FSU households (47\%)
- non-elderly single households (41\%)
- households earning an annual income under \$25,000 (46\%)
- Just Jewish households (46\%)
- intermarried households (41\%)
- synagogue non-member households (48\%)
- households in which no adult attended Jewish education as a child (51\%)
- households in which the respondent is not at all familiar with the Jewish Federation (48\%)
- households in which no adult visited Israel (45\%)
- households in which the Jewish respondent is somewhat emotionally attached (51\%) and not emotionally attached (27\%) to Israel
- households who were asked but did not donate (42\%) and households who were not asked to donate (41\%) to the Jewish Federation in the past year
- households who did not donate to the Jewish Federation in the past year (41\%)

## DONATED TO NON-JEWISH CHARITIES IN THE PAST YEAR

Table $\mathbf{1 4 - 2 0}$ shows that $35 \%$ of Jewish households in Miami did not donate to NonJewish Charities in the past year, 28\% donated under \$100, 22\% donated \$100-\$500, and $15 \%$ donated $\$ 500$ and over, including $9 \%$ who donated $\$ 1,000$ and over. In total, $65 \%$ of households donated to Non-Jewish Charities in the past year.

Community Comparisons. Table 14-21 shows that the $65 \%$ who donated to NonJewish Charities in the past year is the lowest of about 50 comparison Jewish communities and compares to $84 \%$ in Washington, $81 \%$ in Cleveland, $79 \%$ in West Palm Beach, $78 \%$ in Atlanta, $74 \%$ in South Palm Beach, $68 \%$ in New York, and 67\% in Broward. The $65 \%$ compares to $59 \%$ in 2004 and $65 \%$ in 1994. The $65 \%$ compares to $63 \%$ nationally.

The right hand side of Table 14-21 examines only households who donated to Non-Jewish Charities in the past year. Of households who donated to Non-Jewish Charities in the past year, the $43 \%$ who donated under $\$ 100$ is above average among about 45 comparison Jewish communities and compares to 62\% in Broward, 52\% in South Palm Beach, 47\% in West Palm Beach, 30\% in Washington, 28\% in New York, 26\% in Cleveland, and 16\% in Atlanta. The 43\% compares to $45 \%$ in 2004 and $51 \%$ in 1994. The $43 \%$ compares to 35\% nationally.

Of households who donated to Non-Jewish Charities in the past year, the $14 \%$ who donated $\$ 1,000$ and over is about average among about 45 comparison Jewish communities and compares to 22\% in Atlanta, 21\% in New York, 16\% in both Cleveland and Washington, $8 \%$ in both South Palm Beach and West Palm Beach, and 2\% in Broward. The $14 \%$ compares to $12 \%$ in 2004 and $9 \%$ in 1994. The $14 \%$ compares to $11 \%$ nationally.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

## Comparisons Among Population Subgroups.

## Donated to Non-Jewish Charities in the Past Year

Table 14-20 shows that, overall, $65 \%$ of households donated to Non-Jewish Charities in the past year. The percentage is much higher in:

- households in East Kendall (84\%) and NE South Dade (75\%)
- non-elderly couple households (79\%)
- households earning an annual income of \$200,000 and over (85\%)
- Reform households (76\%)
- households who donated to the Jewish Federation in the past year (83\%)

The percentage is much lower in:

- FSU households (39\%), Sephardic households (52\%), Israeli households (47\%), and Holocaust survivor households (43\%)
- households earning an annual income under \$25,000 (44\%)
- Orthodox households (46\%)
- households in which the respondent attended a Jewish day school as a child for 7-12 years (51\%)

## Donated \$100 and Over to Non-Jewish Charities in the Past Year

Table 14-20 shows that, overall, $37 \%$ of households donated $\$ 100$ and over to NonJewish Charities in the past year. The percentage is much higher in:

- part-year households (47\%)
- households in East Kendall (67\%) and NE South Dade (54\%)
- non-elderly couple households (59\%)
- households earning an annual income of \$200,000 and over (75\%)
- Reform households (48\%)
- conversionary in-married households (50\%)
- households in which the respondent is very familiar with the Jewish Federation (52\%)
- households in which an adult visited Israel on a Jewish trip (51\%)
- households who donated to the Jewish Federation in the past year (52\%)
- households who donated \$100-\$500 (63\%) and \$500 and over (84\%) to the Jewish Federation in the past year

The percentage is much lower in:

- households in North Dade Core West (23\%)
- FSU households (11\%), Israeli households (24\%), and Holocaust survivor households (19\%)
- households earning an annual income under \$25,000 (12\%) and \$25,000\$50,000 (17\%)
- Orthodox households (20\%)

${ }^{1}$ NJPS 2000 data are for the more Jewishly-connected sample.

## Overlap Between Households Who Donated to Non-Jewish Charities and Jewish Charities in the Past Year

Table 14-22 shows that 19\% of Jewish households in Miami donated to Non-Jewish Charities but not to Any Jewish Charity (Non-Jewish Charities only) in the past year; 14\% donated to Any Jewish Charity but not to Non-Jewish Charities (Jewish Charities only); 46\% donated to both Any Jewish Charity and Non-Jewish Charities; and 21\% did not donate to Any Charity.

Community Comparisons. Table 14-23 shows that the $19 \%$ who donated to NonJewish Charities only in the past year is about average among about 50 comparison Jewish communities and compares to 38\% in Atlanta, 29\% in Washington, 24\% in New York, 23\% in Cleveland, 21\% in West Palm Beach, 17\% in Broward, and 16\% in South Palm Beach. The 19\% compares to $13 \%$ in both 2004 and 1994. The $19 \%$ compares to 24\% nationally.

The $14 \%$ who donated to Jewish Charities only in the past year is the third highest of about 50 comparison Jewish communities and compares to $16 \%$ in Broward, $15 \%$ in New York, 11\% in South Palm Beach, 8\% in both Atlanta and West Palm Beach, 7\% in Cleveland, and 5\% in Washington. The 14\% compares to 22\% in 2004 and 18\% in 1994. The $14 \%$ compares to $10 \%$ nationally.

The $46 \%$ who donated to both Any Jewish Charity and Non-Jewish Charities in the past year is the fifth lowest of about 50 comparison Jewish communities and compares to 59\% in West Palm Beach, 58\% in both Cleveland and South Palm Beach, 56\% in Washington, 51\% in Broward, 44\% in New York, and 41\% in Atlanta. The 46\% compares to $47 \%$ in 2004 and $53 \%$ in 1994. The $46 \%$ compares to $40 \%$ nationally.

Note that Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of households who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

Comparisons Among Population Subgroups. Table 14-22 shows that, overall, $19 \%$ of households donated to Non-Jewish Charities only in the past year. The percentage is much higher in:

- intermarried households (40\%)
- households in which the Jewish respondent is not emotionally attached to Israel (41\%)
- households who were not asked to donate to the Jewish Federation in the past year (29\%)
- households who did not donate to the Jewish Federation in the past year (28\%)

The percentage is much lower in:

- part-year households (6\%)
- FSU households (9\%) and Holocaust survivor households (7\%)
- households with only adult children (9\%)
- Orthodox households (2\%)
- synagogue member households (8\%) and Jewish organization member households (8\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (5\%)
- households in which the respondent is very familiar with the Jewish Federation (9\%)
- households in which the Jewish respondent is extremely emotionally attached to Israel (7\%)

## SUMMARY OF DONATIONS TO CHARITIES in the Past Year

Table 14-24 shows a comprehensive comparison with other Jewish communities of the percentage of Jewish households in Miami who donated to the Local Jewish Federation, Other Jewish Federations, Any Jewish Federation, Other Jewish Charities, Any Jewish Charity, Non-Jewish Charities, and Any Charity in the past year.

## Local Jewish Federation ©

Table 14-24 shows the percentage of households who donated to the Local Jewish Federation in the past year, as shown in Table 14-7.

## Other Jewish Federations (2)

Table 14-24 shows the percentage of households who donated to Other Jewish Federations in the past year, as shown in Table 14-10. In some communities, no question was asked about donations to Other Jewish Federations, but some respondents volunteered the information when asked about donations to the local Jewish Federation and this information was recorded. If the question had been asked in these communities, the percentage of households who donated to Other Jewish Federations in the past year would likely be higher.

## Any Jewish Federation 6

Table 14-24 shows that the 37\% of Miami Jewish households who donated to Any Jewish Federation in the past year is the seventh lowest of about 35 comparison Jewish communities and compares to 51\% in Broward, 50\% in South Palm Beach, 47\% in West Palm Beach, and $35 \%$ in Washington. The $37 \%$ compares to $48 \%$ in 2004. The $37 \%$ compares to $25 \%$ nationally.

## Other Jewish Charities 3

Table 14-24 shows the percentage of households who donated to Other Jewish Charities in the past year, as shown in Table 14-16

Any Jewish Charity
Table 14-24 shows the percentage of households who donated to Any Jewish Charity in the past year, as shown in Table 14-19.

## Non-Jewish Charities 4

Table 14-24 shows the percentage of households who donated to Non-Jewish Charities in the past year, as shown in Table 14-21.

## Any Charity 8

Table 14-24 shows that the 79\% who donated to Any Charity in the past year is the lowest of about 45 comparison Jewish communities and compares to $90 \%$ in Washington, $88 \%$ in both Cleveland and West Palm Beach, $87 \%$ in Atlanta, $86 \%$ in South Palm Beach, 84\% in Broward, and 83\% in New York. The 79\% compares to 82\% in 2004 and 83\% in 1994. The 79\% compares to 73\% nationally.

TABLE $14-24$
SUMMARY OF DONATIONS TO CHARITIES IN THE PAST YEAR COMMUNITY COMPARISONS

Base: Jewish Households

* Excludes households who donated to charities specifically established for September 11 and Hurricane Katrina victims.
${ }^{1}$ In some communities, no question was asked about donations to Other Jewish Federations. If the question had been asked, the percentage of households who donated to Other Jewish Federations and Any Jewish Federation in the past year would likely be higher.
${ }^{2}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.
${ }^{3}$ NJPS 2000 data are for the more Jewishly-connected sample.

## Philanthropic Market Share in the Past Year

Table 14-25 shows that of all charitable dollars donated by Jewish households in Miami in the past year, 19\% were donated to the Greater Miami Jewish Federation; 5\%, to Other Jewish Federations; 39\%, to Other Jewish Charities; and 37\%, to Non-Jewish Charities. Of all charitable dollars donated to Any Jewish Charity in the past year, 31\% were donated to the Greater Miami Jewish Federation; 8\%, to Other Jewish Federations; and $62 \%$, to Other Jewish Charities.

These percentages should be viewed as rough approximations, since respondents were not asked to report the exact amounts their households donated, but rather were asked to report their donations in the amount categories used in Table 14-1: under \$100, \$100-\$500, \$500-\$1,000, \$1,000-\$2,500, \$2,500-\$5,000, \$5,000-\$10,000, $\$ 10,000-\$ 25,000$, and $\$ 25,000$ and over. When calculating the amounts donated in each category of donations (Local Jewish Federation, Other Jewish Federations, Other Jewish Charities, and Non-Jewish Charities), the amount used was the midpoint of the range in each amount category. For example, all households who donated under $\$ 100$ were assumed to have donated $\$ 50$. All households who donated $\$ 25,000$ and over were assumed (conservatively) to have donated $\$ 25,000$. These amounts were multiplied by the number of households who donated each amount to derive the total amount donated in each category of donations. These total amounts were then converted to percentages.

Note that this analysis probably overestimates the Greater Miami Jewish Federation's share of all charitable dollars because of the significant disparity between the percentage of households who reported that they donated according to the Telephone Survey (32\%) and the percentage of households who donated according to the Jewish Federation Survey (15\%) in the past year (Table 14-11).

Community Comparisons. Table $\mathbf{1 4 - 2 5}$ shows that the $19 \%$ of all charitable dollars donated to the Local Jewish Federation in the past year is about average among about 35 comparison Jewish communities and compares to $20 \%$ in both South Palm Beach and Broward, 17\% in West Palm Beach, and 15\% in Washington. The 19\% compares to 23\% in 2004 and $21 \%$ in 1994. The $24 \%$ ( $19 \%$ plus 5\%) of charitable dollars donated to Any Jewish Federation in the past year compares to 19\% nationally.

The 39\% of all charitable dollars donated to Other Jewish Charities in the past year is the fourth highest of about 35 comparison Jewish communities and compares to $34 \%$ in Broward, 33\% in South Palm Beach, 32\% in West Palm Beach, and 30\% in Washington. The $39 \%$ compares to $39 \%$ in 2004 and $48 \%$ in 1994. The $39 \%$ compares to $43 \%$ nationally.

The $37 \%$ of all charitable dollars donated to Non-Jewish Charities in the past year is about average among about 35 comparison Jewish communities and compares to 55\% in Washington, 32\% in Broward, 31\% in West Palm Beach, and 28\% in South Palm Beach. The $37 \%$ compares to $29 \%$ in 2004 and $27 \%$ in 1994. The $37 \%$ compares to $38 \%$ nationally.

The 63\% of all charitable dollars donated to Any Jewish Charity in the past year is about average among about 35 comparison Jewish communities and compares to $72 \%$ in South Palm Beach, 69\% in West Palm Beach, 68\% in Broward, and 45\% in Washington. The $63 \%$ compares to $71 \%$ in 2004 and $73 \%$ in 1994. The $63 \%$ compares to $62 \%$ nationally.

The $31 \%$ of Jewish charitable dollars donated to the Local Jewish Federation in the past year is about average among about 35 comparison Jewish communities and compares to 33\% in Washington, 29\% in Broward, 27\% in South Palm Beach, and 24\% in West Palm Beach. The 31\% compares to 33\% in 2004 and 30\% in 1994.

${ }^{1}$ In some communities, no question was asked about amounts donated to Other Jewish Federations and zeros have been entered in the table. If the question had been asked, there would likely be a very small percentage of charitable dollars donated to Other Jewish Federations in the past year.
${ }^{2}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.
${ }^{3}$ NJPS 2000 data are for the more Jewishly-connected sample.

## Have Wills That Contain Provisions for Charities

Table 14-26 shows that $25 \%$ of respondents age 50 and over in Jewish households in Miami do not have wills; 63\% have wills that contain no provisions for charities; 10\% have wills that contain provisions for Jewish Charities; and $2 \%$ have wills that contain provisions for Non-Jewish Charities only.
$10 \%$ of households who never had children have wills that contain provisions for Jewish Charities and $2 \%$ have wills that have provisions for Non-Jewish Charities only.
$\checkmark$ The $1 \%$ of respondents age 50 and over who have wills that contain provisions for both Jewish and Non-Jewish Charities are reported as having wills that contain provisions for Jewish Charities.

Community Comparisons. Table 14-27 shows that the $25 \%$ who have no wills is the third highest of about 40 comparison Jewish communities and compares to $20 \%$ in Washington, $11 \%$ in Broward, 10\% in South Palm Beach, and 9\% in West Palm Beach. The $25 \%$ compares to $23 \%$ in 2004 . The $25 \%$ compares to $27 \%$ nationally.

The $10 \%$ who have wills that contain provisions for Jewish Charities is about average among about 40 comparison Jewish communities and compares to $13 \%$ in both South Palm Beach and West Palm Beach, and 7\% in both Washington and Broward. The 10\% compares to $11 \%$ in 2004. The $10 \%$ compares to $11 \%$ nationally.

The $2 \%$ who have wills that contain provisions for Non-Jewish Charities only is the lowest of about 35 comparison Jewish communities and compares to 6\% in Washington, $3 \%$ in both South Palm Beach and West Palm Beach, and 2\% in Broward. The 2\% compares to $4 \%$ in 2004. The $2 \%$ compares to $4 \%$ nationally.

Comparisons Among Population Subgroups. Table 14-26 shows that, overall, 10\% of respondents age 50 and over have wills that contain provisions for Jewish Charities. The percentage is much higher for respondents age 50 and over (in):

- who are very familiar with the Jewish Federation (21\%)
- households in North Beach (22\%)
- households earning an annual income of \$200,000 and over (26\%)
- Jewish organization member households (22\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (37\%)

## Volunteered in the Past Year

『ewish respondents in Miami were asked whether they had done any "volunteer work for, or sponsored by, a synagogue, Jewish Federation, or other Jewish organization" in the past year and whether they had done any "volunteer work for, or sponsored by, any organization that is not specifically Jewish" in the past year.

The left hand side of Table 14-28 shows the percentage of respondents who volunteered for Jewish organizations and non-Jewish organizations in the past year. The right hand side of the table shows the percentage of respondents who volunteered for Jewish organizations but not for non-Jewish organizations (Jewish organizations only) in the past year; for non-Jewish organizations but not for Jewish organizations (non-Jewish organizations only); for both Jewish and non-Jewish organizations; and for neither Jewish nor non-Jewish organizations (did not volunteer for any organizations).
$26 \%$ of respondents volunteered for Jewish organizations in the past year, and $28 \%$, for non-Jewish organizations. In total, 43\% of respondents volunteered for some organization (Jewish or non-Jewish) in the past year.

14\% of respondents volunteered for Jewish organizations only in the past year; 17\%, for non-Jewish organizations only; 12\%, for both Jewish and non-Jewish organizations; and $57 \%$ did not volunteer for any organizations.

Community Comparisons. Table $\mathbf{1 4 - 2 9}$ shows that the $26 \%$ who volunteered for Jewish organizations in the past year is about average among about 25 comparison Jewish communities and compares to 31\% in New York, 27\% in Washington, 23\% in South Palm Beach, and 22\% in West Palm Beach. The 26\% compares to 29\% in 2004. The 26\% compares to $23 \%$ nationally.

The $28 \%$ who volunteered for non-Jewish organizations in the past year is the second lowest of about 25 comparison Jewish communities and compares to 47\% in Washington, 32\% in New York, 31\% in West Palm Beach, and 26\% in South Palm Beach. The 28\% compares to $27 \%$ in 2004 . The $28 \%$ compares to $34 \%$ nationally.

The $14 \%$ who volunteered for Jewish organizations only in the past year is about average among about 25 comparison Jewish communities and compares to $14 \%$ in South Palm Beach, 12\% in New York, 11\% in West Palm Beach, and 10\% in Washington. The $14 \%$ compares to $17 \%$ in 2004 . The $14 \%$ compares to $8 \%$ nationally.

The $17 \%$ who volunteered for non-Jewish organizations only in the past year is the fourth lowest of about 25 comparison Jewish communities and compares to $30 \%$ in Washington, 20\% in West Palm Beach, 17\% in South Palm Beach, and 13\% in New York. The $17 \%$ compares to $15 \%$ in 2004 . The $17 \%$ compares to $20 \%$ nationally.

The $12 \%$ who volunteered for both Jewish and non-Jewish organizations in the past year is below average among about 25 comparison Jewish communities and compares to $19 \%$ in New York, 17\% in Washington, 11\% in West Palm Beach, and 9\% in South Palm Beach. The $12 \%$ compares to $12 \%$ in 2004 . The $12 \%$ compares to $14 \%$ nationally.

The $57 \%$ who did not volunteer for any organizations in the past year is the fourth highest of about 25 comparison Jewish communities and compares to $60 \%$ in South Palm Beach, 58\% in West Palm Beach, 56\% in New York, and 43\% in Washington. The 57\% compares to $56 \%$ in 2004. The 57\% compares to $58 \%$ nationally and $73 \%$ of all Americans (both Jewish and non-Jewish as of 2006).

## Comparisons Among Population Subgroups.

## Volunteered for Jewish Organizations in the Past Year

Table 14-28 shows that, overall, $26 \%$ of respondents volunteered for Jewish organizations in the past year. The percentage is much higher for respondents (in):

- households in East Kendall (37\%) and North Beach (52\%)
- age 35-49 (36\%)
- households with children (39\%)
- households earning an annual income of \$200,000 and over (39\%)
- Orthodox households (51\%)
- synagogue member households (48\%), households who attended Chabad in the past year (40\%), JCC member households (44\%), and Jewish organization member households (47\%)
- households in which the respondent attended a Jewish day school as a child for $7-12$ years (40\%) and for 1-7 years (36\%)
- households in which the respondent participated in Hillel/Chabad while in college (excluding High Holidays) (40\%)
- who are very familiar with the Jewish Federation (46\%)
- households who donated (37\%) to the Jewish Federation in the past year
- households who donated \$100-\$500 (44\%) and \$500 and over (58\%) to the Jewish Federation in the past year

The percentage is much lower for respondents (in):

- Holocaust survivor households (16\%)
- age 75 and over (13\%)
- households earning an annual income under \$25,000 (15\%)
- Just Jewish households (16\%)
- intermarried households (15\%)
- synagogue non-member households (13\%)
- who are not at all familiar with the Jewish Federation (15\%)
- households in which no adult visited Israel (15\%)

Volunteered for Non-Jewish Organizations Only in the Past Year
Table 14-28 shows that, overall, $17 \%$ of respondents volunteered for non-Jewish organizations only in the past year. The percentage is much higher for respondents in:

- conversionary in-married households (33\%) and intermarried households (30\%)

The percentage is much lower for respondents in:

- households in East Kendall (30\%)
- FSU households (7\%) and Holocaust survivor households (2\%)
- Orthodox households (3\%)

Take ye from among you an offering unto the Lord, whosoever is of a wilfing heart, Let fim bring it. . .
(Exodus 35:5)

## Motivations to Donate TO A JEWISH ORGANIZATION

Respondents in Jewish households in Miami who donated \$100 and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year were asked how important each of several motivations is in their decisions to donate to a Jewish organization. Table 15-1 shows the percentage of respondents who consider each motivation to be very important, somewhat important, and not at all important.

Note that the list of motivations was not read to the respondents in the order shown in Table 15-1 nor in the order shown in the questionnaire in Appendix A. Rather, the list of motivations was read in a random order to each respondent.

One important observation is that all of the motivations are at least somewhat important to the vast majority of respondents. However, clear distinctions do exist in the level of importance respondents attribute to each motivation, from the $49 \%$ of respondents who consider helping Jewish children go to Jewish summer camp and on trips to Israel to be a very important motivation to the $80 \%$ who consider helping Jews locally who cannot afford food or shelter to be a very important motivation.

Table 15-2 shows the manner in which four of the motivations in Table 15-1compare to other Jewish communities and to some motivations reported in the 2004 Miami Jewish community.

See the "Definitions and Methodological Issues" section in Chapter 14 for definitions of the various categories of charitable donations.

TABLE 15-1
IMPORTANCE OF MOTIVATIONS TO DONATE TO A JEwISH ORGANIZATION
Base: Respondents in Jewish Households Who Donated \$100 and Over to the Greater Miami Jewish Federation, Other Jewish Federations,
or Other Jewish Charities in the Past Year
Sample Size: 969, Number of Households: 20,665

| Motivation | Very <br> Important | Somewhat <br> Important | Not at AII <br> Important |
| :--- | :---: | :---: | :---: |
| Helping Jews Locally Who Cannot Afford Food or <br> Shelter | $79.8 \%$ | 18.3 | 1.9 |
| Providing Services for the Jewish Elderly (Elderly) | $71.6 \%$ | 24.2 | 4.2 |
| Providing Jewish Education for Children <br> (Jewish Education) | $67.3 \%$ | 28.2 | 4.5 |
| Supporting the People of Israel (Israel) | $65.6 \%$ | 29.4 | 5.0 |
| Helping Jewish Communities Elsewhere in the <br> World (Overseas) | $50.6 \%$ | 39.2 | 10.2 |
| Helping Jewish Children Go to Jewish Summer <br> Camp and on Trips to Israel | $48.9 \%$ | 39.2 | 11.9 |

Notes:

1) The names in parentheses are the names used in Table 15-2.
2) In all other communities, "Helping Jewish Communities Elsewhere in the World" has been worded as "Helping Jews Overseas Who Are in Distress."

## TABLE 15-2

Importance of Various Motivations
to DONATE TO A JEwISH ORGANIZATION COMMUNITY COMPARISONS
BASE: RESPONDENTS IN JEWISH Households WHo DONATED \$ 100 AND OVER TO THE
LOCAL JEWISH FEDERATION, OTHER JEWISH FEDERATIONS, OR OTHER JEWISH CHARITIES
IN THE PAST YEAR
\% VERY IMPORTANT

Notes:

1) Boldface percentages are the highest percentage for each community.
2) See the text for the full text of each motivation.
3) In Miami 2014:

Providing Individual and Family Counseling for Jews (Counseling) Supporting Educational Trips to Israel (Israel Trips) Providing Social, Recreational, and Cultural Activities for Jews (SRC) were not asked.

## Helping Jews Locally who Cannot Afford FOOD OR SHELTER

Table 15-3 shows that $80 \%$ of respondents in Jewish households in Miami who donated $\$ 100$ and over to the Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider helping Jews locally who cannot afford food or shelter to be a very important motivation to donate to a Jewish organization; 18\%, a somewhat important motivation; and 2\%, a not at all important motivation.

In the 2004 Miami Jewish community study, a similar question was asked. In that study, $76 \%$ of respondents in Jewish households in Miami who donated $\$ 100$ and over to the Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider helping the Jewish poor to be a very important motivation to donate to a Jewish organization; 21\%, a somewhat important motivation; and 3\%, a not at all important motivation.

Comparisons Among Population Subgroups. Table 15-3 shows that, overall, $80 \%$ of respondents consider helping the Jewish poor to be a very important motivation. No population subgroups show important differences from the overall percentage.

TABLE 15-3

| \$200,000 and over | 78.9\% | 19.0 | 2.1 | 348 | 7,460 |

DONATED TO JEWISH Federation in the Past Year

| Nothing | $79.1 \%$ | 17.8 | 3.1 | 321 | 9,485 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Under $\$ 100$ | $85.1 \%$ | 13.4 | 1.5 | 115 | 2,128 |
| $\$ 100-\$ 500$ | $76.3 \%$ | 22.3 | 1.4 | 247 | 4,980 |
| $\$ 500-\$ 1,000$ | $78.9 \%$ | 21.1 | 0.0 | 68 | 2,604 |
| $\$ 1,000$ and over | $82.8 \%$ | 17.2 | 0.0 | 199 | 1,448 |

## Providing Services for the Jewish Elderly

Table 15-4 shows that $72 \%$ of respondents in Jewish households in Miami who donated \$100 and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider providing services for the Jewish elderly to be a very important motivation to donate to a Jewish organization; $24 \%$, a somewhat important motivation; and 4\%, a not at all important motivation.

Community Comparisons. Table $\mathbf{1 5 - 5}$ shows that the $72 \%$ who consider providing services for the Jewish elderly to be a very important motivation to donate to a Jewish organization is above average among about 25 comparison Jewish communities and compares to $71 \%$ in South Palm Beach, $64 \%$ in West Palm Beach, and $53 \%$ in Washington. The 72\% compares to 75\% in 2004.

Comparisons Among Population Subgroups. Table 15-4 shows that, overall, 72\% of respondents consider providing services for the Jewish elderly to be a very important motivation. The percentage is much higher for respondents in:

- households earning an annual income under \$50,000 (83\%)

> In all other communities, this question asked about "providing social services for the Jewish elderly." This researcher believes that the Community Comparisons are still valid despite this difference in wording.

TABLE 15-4

## Providing Jewish Education for Children

T
able 15-6 shows that 67\% of respondents in Jewish households in Miami who donated $\$ 100$ and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider providing Jewish education for children to be a very important motivation to donate to a Jewish organization; 28\%, a somewhat important motivation; and 5\%, a not at all important motivation.

Community Comparisons. Table 15-7 shows that the $67 \%$ who consider providing Jewish education for children to be a very important motivation to donate to a Jewish organization is about average among about 25 comparison Jewish communities and compares to $65 \%$ in South Palm Beach, 63\% in West Palm Beach, and 45\% in Washington. The 67\% compares to 70\% in 2004.

Comparisons Among Population Subgroups. Table 15-6 shows that, overall, 67\% of respondents consider providing Jewish education for children to be a very important motivation. The percentage is much higher for respondents (in):

- households earing an annual income under \$50,000 (78\%)
- households who donated $\$ 1,000$ to the Jewish Federation in the past year (77\%)

## Supporting the People of Israel

Table $\mathbf{1 5 - 8}$ shows that $66 \%$ of respondents in Jewish households in Miami who donated \$100 and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider supporting the people of Israel to be a very important motivation to donate to a Jewish organization; 29\%, a somewhat important motivation; and $5 \%$, a not at all important motivation.

Community Comparisons. Table $\mathbf{1 5 - 9}$ shows that the $66 \%$ who consider supporting the people of Israel to be a very important motivation to donate to a Jewish organization is above average among about 25 comparison Jewish communities and compares to 68\% in South Palm Beach, 63\% in West Palm Beach, and 58\% in Washington. The 68\% compares to $72 \%$ in 2004. Note that the Community Comparisons need to be examined in light of events occurring in Israel at the time of each study.

Age of Respondent. Table $\mathbf{1 5 - 1 0}$ shows that the $64 \%$ under age 50 who consider supporting the people of Israel to be a very important motivation to donate to a Jewish organization is the third highest of about 15 comparison Jewish communities. The 64\% compares to $70 \%$ in 2004.

The 65\% age 50-64 who consider supporting the people of Israel to be a very important motivation to donate to a Jewish organization is the second highest of about 20 comparison Jewish communities and compares to 66\% in West Palm Beach, 64\% in South Palm Beach, and 52\% in Washington. The 65\% compares to 64\% in 2004.

The $67 \%$ age 65 and over who consider supporting the people of Israel to be a very important motivation to donate to a Jewish organization is about average among about 20 comparison Jewish communities and compares to $70 \%$ in South Palm Beach, 66\% in Washington, 64\% in West Palm Beach. The 67 \% compares to $78 \%$ in 2004.

Comparisons Among Population Subgroups. Table 15-8 shows that, overall, 66\% of respondents consider supporting the people of Israel to be a very important motivation. No population subgroups show important differences from the overall percentage.

## Helping Jewish Communities Elsewhere IN THE WORLD

Table $\mathbf{1 5 - 1 1}$ shows that $51 \%$ of respondents in Jewish households in Miami who donated $\$ 100$ and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider helping Jewish communities elsewhere in the world to be a very important motivation to donate to a Jewish organization; 39\%, a somewhat important motivation; and 10\%, a not at all important motivation.

Community Comparisons. In all other communities, "Helping Jewish Communities Elsewhere in the World" has been worded as "Helping Jews Overseas Who Are in Distress." Table 15-12 shows that the $51 \%$ who consider helping Jews overseas who are in distress to be a very important motivation to donate to a Jewish organization is about average among about 20 comparison Jewish communities and compares to 59\% in South Palm Beach, 55\% in West Palm Beach, and 50\% in Washington. The 51\% compares to 60\% in 2004.

Comparisons Among Population Subgroups. Table 15-11 shows that, overall, $51 \%$ of respondents consider helping Jewish communities elsewhere in the world to be a very important motivation. No population subgroups show important differences from the overall percentage.

In all other communities, this question asked about "helping Jews overseas who are in distress" This researcher believes that the Community Comparisons are still valid despite this difference in wording.

## Helping Jewish Children Go to Jewish Summer Camp and on Trips to Israel

T
able $15-13$ shows that $49 \%$ of respondents in Jewish households in Miami who donated $\$ 100$ and over to the Greater Miami Jewish Federation, other Jewish Federations, or other Jewish charities in the past year consider helping Jewish children go to Jewish summer camp and on trips to Israel to be a very important motivation to donate to a Jewish organization; 39\%, a somewhat important motivation; and 12\%, a not at all important motivation.

Comparisons Among Population Subgroups. Table 15-13 shows that, overall, $49 \%$ of respondents consider helping Jewish children go to Jewish summer camp and on trips to Israel to be a very important motivation. The percentage is much higher for respondents in:

- households earning an annual income under $\$ 50,000$ ( $64 \%$ )
- households who donated $\$ 500-\$ 1,000$ to the Jewish Federation in the past year (60\%)

## Combating Anti-Semitism as a Motivation to Donate to a Jewish Organization

In a question asked in the 2004 study, but not repeated in this study, $71 \%$ of respondents in Jewish households who donated $\$ 100$ and over to the local Jewish Federation, other Jewish Federations, or other Jewish Charities in the past year considered combating anti-Semitism very important; $23 \%$, somewhat important; and $6 \%$, not at all important as a motivation to donate.

For comparisons of these statistics with other communities, see Section 33 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Providing Individual and Family Counseling for Jews as a Motivation to Donate to a Jewish Organization

In a question asked in the 2004 study, but not repeated in this study, $48 \%$ of respondents in Jewish households who donated $\$ 100$ and over to the local Jewish Federation, other Jewish Federations, or other Jewish Charities in the past year considered providing individual and family counseling for Jews very important; 38\%, somewhat important; and $14 \%$, not at all important as a motivation to donate.

For comparisons of these statistics with other communities, see Section 33 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Providing Social, Recreational, and Cultural Activities for Jews as a Motivation to Donate to a Jewish Organization

In a question asked in the 2004 study, but not repeated in this study, $45 \%$ of respondents in Jewish households who donated $\$ 100$ and over to the local Jewish Federation, other Jewish Federations, or other Jewish Charities in the past year considered providing social, recreational, and cultural activities for Jews very important; $39 \%$, somewhat important; and $8 \%$, not at all important as a motivation to donate.

For comparisons of these statistics with other communities, see Section 33 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Supporting Educational Trips to Israel <br> Motivation to Donate to a Jewish Organization

In a question asked in the 2004 study, but not repeated in this study, 44\% of respondents in Jewish households who donated $\$ 100$ and over to the local Jewish Federation, other Jewish Federations, or other Jewish Charities in the past year considered supporting educational trips to Israel very important; 39\%, somewhat important; and 17\%, not at all important as a motivation to donate.

For comparisons of these statistics with other communities, see Section 33 of Ira M. Sheskin. Comparisons of Jewish Communities: A Compendium of Tables and Bar Charts (Storrs, CT: Mandell Berman Institute, Berman Jewish Data Bank and The Jewish Federations of North America, 2012) at www.jewishdatabank.org,

## Motivations to Donate More to the Greater Miami Jewish Federation

Respondents in Jewish households in Miami who donated \$100 and over to the Greater Miami Jewish Federation (Jewish Federation) in the past year were asked whether each of several motivations would cause them to donate more to the Jewish Federation. Table $\mathbf{1 5 - 1 4}$ shows the percentage of respondents who responded in the affirmative for each motivation.

Note that the list of motivations was not read to the respondents in the order shown in Table 15-14 nor in the order shown in the questionnaire in Appendix A. Rather, the list of motivations was read in a random order to each respondent.
$\checkmark$ Omitted from this analysis are $8 \%$ of respondents who replied "don't know" to this set of questions.
$28 \%$ of respondents would donate more to the Jewish Federation if more of the money went to local needs; $27 \%$, if they had more say over how the money was spent; $24 \%$, if they were asked by a close friend; and 19\%, if more of the money went to needs in Israel and overseas.

Community Comparisons. Table $\mathbf{1 5 - 1 5}$ shows that the $28 \%$ who would donate more to the local Jewish Federation if more of the money went to local needs is well below average among about 20 comparison Jewish communities and compares to $27 \%$ in both South Palm Beach and Washington and 18\% in West Palm Beach. The 28\% compares to $33 \%$ in 2004.

Table 15-16 shows that the $27 \%$ who would donate more to the local Jewish Federation if they had more say over how the money was spent is about average among about 20 comparison Jewish communities and compares to 28\% in Washington. The 27\% compares to $34 \%$ in 2004.

Table 15-17 shows that the $24 \%$ who would donate more to the local Jewish Federation if asked by a close friend is about average among about 20 comparison Jewish communities and compares to 26\% in Washington, 22\% in West Palm Beach, and 19\% in South Palm Beach. The 24\% compares to 29\% in 2004.

Table 15-18 shows that the $19 \%$ who would donate more to the local Jewish Federation if more of the money went to needs in Israel and overseas is about average among about 20 comparison Jewish communities and compares to $20 \%$ in both South Palm Beach and West Palm Beach, and 19\% in Washington. The 19\% compares to $27 \%$ in 2004.

Table 15-19 shows the 9 percentage point disparity between the $28 \%$ who would donate more to the local Jewish Federation if more of the money went to local needs and the 19\% who would donate more to the local Jewish Federation if more of the money went to needs in Israel and overseas is below average among about 20 comparison Jewish communities and compares to 8 percentage points in Washington, 7 percentage points in South Palm Beach, and -2 percentage points in West Palm Beach. The 9 percentage points compares to 7 percentage points in 2004.

Comparisons Among Population Subgroups. Table $\mathbf{1 5 - 1 4}$ shows the percentage of respondents in each population subgroup who would donate more to the Jewish Federation for each motivation queried.

Overall, $28 \%$ of respondents would donate more to the Jewish Federation if more of the money went to local needs. The percentage is much higher for respondents:

- under age 35 (43\%)

The percentage is much lower for respondents in:

- households earning \$50,000-\$100,000 (18\%)
- households who donated $\$ 2,500$ and over to the Jewish Federation in the past year (18\%)

Overall, $24 \%$ of respondents would donate more to the Jewish Federation if they had more say over how the money was spent. The percentage is much higher for respondents:

- under age 35 (53\%)

Overall, $27 \%$ of respondents would donate more to the Jewish Federation if asked by a close friend. The percentage is much higher for respondents:

- under age 35 (36\%)

The percentage is much lower for respondents (in):

- age 65-74 (14\%)
- households earning an annual income of \$50,000-\$100,000 (14\%)

Overall, $19 \%$ of respondents would donate more to the Jewish Federation if more of the money went to needs in Israel and overseas. No population subgroups show important differences from the overall percentage.

## Political Party

$\square$ewish respondents in Miami were asked whether they think of themselves as Republican, Democrat, Independent, or something else. Table 16-1 shows that 18\% (9,915 households) of respondents think of themselves as Republican; 53\% (29,298 households), Democrat, 21\% (11,530 households), Independent; and 9\% (4,957 households), something else. This discussion focuses on the percentage Republican and percentage Democrat.
$\boldsymbol{\checkmark}$ If all Jewish adults in households in which the respondents think of themselves as Republican also think of themselves as Republican, then 19,418 Jewish adults think of themselves as Republican. If all Jewish adults in households in which the respondents think of themselves as Democrat also think of themselves as Democrat, then 49,618 Jewish adults think of themselves as Democrat.

Community Comparisons. Table $\mathbf{1 6 - 2}$ shows Miami compared with eight other comparison Jewish communities. The 18\% Republican compares to $11 \%$ in Washington and the $14 \%$ national figure. The $53 \%$ Democrat compares to $69 \%$ in Washington and the 61\% national figure. The 21\% Independent compares to 17\% in Washington and the 20\% national figure. The $9 \%$ something else compares to $4 \%$ in Washington and the 6\% national figure.

Comparisons Among Population Subgroups. Table 16-1 shows that, overall, 18\% of respondents consider themselves Republican. The percentage is much higher for respondents in:

- households in North Beach (32\%)
- FSU households (38\%) and Israeli households (29\%)
- Orthodox households (43\%)

Overall, $53 \%$ of respondents consider themselves Democrats. The percentage is much higher for respondents in:

- households in West Kendall (70\%)
- elderly single households (64\%)
- households earning an annual income of \$25,000-\$50,000 (65\%)
- households in which the respondent is not emotionally attached to Israel (68\%)

The percentage is much lower for respondents (in):

- part-year households (38\%)
- households in North Beach (39\%) and South Beach (40\%)
- FSU households (21\%), Hispanic households (41\%), Sephardic households (41\%), Israeli households (33\%), and Holocaust survivor households (35\%)
- households in residence in Miami for 0-4 years (43\%), 5-9 years (43\%), and 10-19 years (41\%)
- age 35-49 (41\%)
- households in which the respondent is male (43\%)
- households with children (42\%)
- households earning an annual income of \$200,000 and over (40\%)
- Orthodox households (24\%)
- households who attended Chabad in the past year (41\%)
- who are extremely emotionally attached to Israel (41\%)

## PROFILES OF REPUBLICANS AND DEMOCRATS

W
hile Table 16-1 shows the percentage of Jewish respondents in each population group in Miami who think of themselves as Republican or Democrat, Table 16-3 shows profiles of Jewish respondents who think of themselves as Republican (Republicans) or Democrat (Democrats) or Independents (Independents). As an example of the interpretation of this table, note that while Table 16-1 shows that 21\% of Jewish respondents under age 35 think of themselves as Republican, Table 16-3 shows that 16\% of Republicans are under age 35.

Compared to Democratic households, Republican households are much more likely to (be):

- live in North Dade Core East
- FSU households, Hispanic households, Sephardic households, and Israeli households
- under age 50
- male
- households with children
- earning an annual income of \$200,000 and over
- Orthodox households
- involved in home religious practices
- attend services once per month or more
- have attended adult Jewish education classes in the past year
- in-married
- synagogue member households and be households who attended Chabad in the past year
- have visited Israel on a general trip
- extremely emotionally attached to Israel

Compared to Democratic households, Republican households are much less likely to (be):

- live in West Kendall and Other North Dade
- live in households in residence for 20 or more years
- age 65 and over
- female
- earning an annual income of \$25,000-\$50,000
- live in elderly single households
- Reform households
- never attend services
- intermarried
- never have been to Israel

## REGISTERED TO VOTE

Table 16-4 shows that $95 \%$ ( 52,971 households) of respondents in Miami are registered to vote.

Community Comparisons. Table $\mathbf{1 6 - 5}$ shows that the $95 \%$ who are registered to vote is about average among about ten comparison Jewish communities and compares to $96 \%$ in each of South Palm Beach, West Palm Beach, and Washington, and 88\% in New York. The $95 \%$ compares to $88 \%$ in 1994. The $95 \%$ compares to the $90 \%$ national figure (NJPS 2000) and 60\% of all Americans as of 2010.

Table 16-6 shows that the $93 \%$ of respondents under age 35 who are registered to vote is the third highest of about ten comparison Jewish communities and compares to $94 \%$ in both West Palm Beach and Washington, 83\% in South Palm Beach, and $72 \%$ in New York. The $93 \%$ compares to $85 \%$ in 1994 . The $93 \%$ compares to the $77 \%$ national figure.

Comparisons Among Population Subgroups. Table 16-4 shows that, overall, 95\% of respondents are registered to vote. No population subgroups show important differences from the overall percentage.

## Politically Active

凹ewish respondents in Miami were asked whether they attended any political meetings or rallies, contributed money to a political party or candidate, or contacted or wrote to a government official in the past year (politically active). Table 16-4 shows that 29\% (15,930 households) of respondents are politically active.
$\checkmark$ The $29 \%$ compares to $45 \%$ in Washington and $34 \%$ in Bergen, the only other communities for which the data are available. The $29 \%$ compares to the $32 \%$ national figure.

Comparisons Among Population Subgroups. Table 16-4 shows that, overall, 29\% of respondents are politically active. The percentage is much higher for respondents in:

- households in East Kendall (44\%), NE South Dade (43\%), and North Beach (39\%)
- households earning an annual income of \$200,000 and over (44\%)
- Reform households (58\%)
- households who donated $\$ 500$ and over to the Jewish Federation in the past year (50\%)

The percentage is much lower for respondents in:

- FSU households (4\%), Israeli households (11\%), and Holocaust survivor households (14\%)
- households in residence in Miami for 0-4 years (17\%)

## Appendix A:

## QUESTIONNAIRE

||

Hello. We are calling for a population study for the Jewish community sponsored by the Greater Miami Jewish Federation. We are NOT asking for donations or selling anything and we do not know your name or address. We are randomly interviewing households with one or more Jewish people.

IF RESPONDENT ABOUT TO DISCONNECT, ASK QUICKLY: Quick, one question, Are you Jewish? Does anyone in your household consider themselves Jewish?

A Was anyone in your household born or raised Jewish, or is anyone currently Jewish?

(FIRST NAME ONLY)
IF CALLED CELL:
I know I am calling you on a cell phone. Are you driving or doing anything that requires your full attention right now? IF YES: ARRANGE CALL BACK. IF NO: CONTINUE
© Your participation is important in helping the Miami Jewish community identify needs and plan for the future.

Your answers will be anonymous. We do NOT know your name or address.

DO THE SURVEY

So that we can properly understand your answer, please tell me what you mean when you say someone in your household was (born/raised) Jewish but is not currently Jewish?

GO TO * IF: Agnostic, Atheist, Cultural, Doesn't identify as Jewish, No religion, Non-observant, Non-practicing, Non-religious, Non-Western religion (Buddhist), Nothing, Secular

ASK IF NECESSARY: Have you converted to another religion? Do you regularly attend church services?

IF NO TO BOTH QUESTIONS, GO TO *:
IF YES TO EITHER QUESTION: USE A PJB CODE BELOW. Goodbye.

IF CALLED 305 OR 786 CELL:
Since no one in your household is Jewish, just one question: Do you currently live in Miami-Dade County?

[^16]||

|  | - - ${ }^{8}$ | \$39,500 ? | 1. Yes | 2. No | 9. DK/NR | GO TO CLOSING |

4. \$50,000-\$75,000, or
5. \$75,000-\$100,000?

GO TO CLOSING
9. DK/NR GOTO
151. Was it:
6. $\mathbf{\$ 1 0 0 , 0 0 0 - \$ 1 5 0 , 0 0 0}$
7. \$150,000-\$200,000, or
8. $\mathbf{\$ 2 0 0}, \mathbf{0 0 0}$ or over? GO TO CLOSING
9. DK/NR GOTO

## A overcoming resistance

Let me assure you that the information we are gathering is anonymous. The results are reported in terms such as: $45 \%$ of households earn under $\$ 50,000$ and $55 \%$ earn $\$ 50,000$ and over.
SEE OVERCOMING RESISTANCE TO INCOME PAGE AT YOUR DESK FOR MORE SUGGESTIONS.

## CLOSING

Finally, let me just check your phone number so that we do not call you back again by mistake. Is the number I called you at: $\qquad$ ?

I would like to thank you on behalf of the entire Jewish community for your cooperation with this study.

If you would like any information about the Jewish community, or have any needs the Jewish community might serve, you may call the Jewish Federation at (305) 576-4000 or visit the website at jewishmiami.org. Have a great (day / evening).

[^11]:    * These responses were read to the respondents. The responses Too Old and Lack of Time were not read to the respondents, but were volunteered by respondents as major reasons. All other reasons volunteered by the respondents, none of which were individually significant, are reported as Other.

[^12]:    Footnotes to Table 7-40.
    Definition:
    Jewish households are defined as associated with the Jewish community if someone in the household is a member of a synagogue, the JCC, or a Jewish organization.

    * No JCC is located in the community and no JCC membership is included in Association.
    ** Includes JCC membership in JCCs that are located in neighboring communities.

    2. JCC is not a full service facility.
    ${ }^{1}$ Includes participation in a JCC program without necessarily being a member of the JCC.
    ${ }^{2}$ NJPS 2000 data are for the more Jewishly-connected sample.
    Notes: 1) In some communities, mostly communities with a significant number of part-year households, membership in non-local JCCs is also included.
    2) Association includes membership in both local and non-local synagogues and in local JCCs.
[^13]:    ${ }^{1}$ Includes the responses not very familiar (12\%) and not at all familiar (42\%).

[^14]:    ${ }^{1}$ Includes the responses not very familiar (17\%) and not at all familiar (52\%).

[^15]:    ${ }^{1}$ Martin-St. Lucie has no Local Jewish Federation and is served by the Jewish Federation of Palm Beach County.
    ${ }^{2}$ NJPS 2000 data are for the more Jewishly-connected sample and reflect the percentage of households who donated to Any Jewish Federation, not just the Local Jewish Federation.
    Note: See page 14-6 for an explanation of $\boldsymbol{1}, \boldsymbol{( 2 )}, \boldsymbol{3}$, and $\mathbf{4}$.

[^16]:    IF YOU ARE NOT CERTAIN RESPONDENT IS AGE 18+:
    Are you age 18 or over?
    IF UNDER 18 AND CALLED LANDLINE: May I please speak with someone who is at least $\mathbf{1 8}$ IF UNDER 18 AND CALLED CELL PHONE: Thank you for your time.
    IF OVER AGE 18: DO THE SURVEY
